There was an appropriation of \$400 made at the same time for the repair of slate roofs, etc. On September 10, at about 8:30 A. M., during the prevalence of a severe thunder storm, lightning struck our main building, and though the fire was promptly extinguished, the roof was left in a damaged condition, and of the appropriation above mentioned \$347.75 was expended in repairing the same, leaving a balance in this fund of \$52.25.

## RECOMMENDATIONS.

Within the past four years the average daily population has constantly been on the increase. June 30, 1908, it was 152, while on June 30, 1912, it was 209, an increase of 37 per cent. I believe we may reasonably expect an average of 225 during the coming period of two years.

My estimate for 1911-'12 was based upon an average population of 200, at an average cost of \$208 per head. For 1913-'14, we must make provision for 225 at the rate above mentioned. This will call for an annual expenditure of \$46,800.

## SUMMARY OF APPROPRIATIONS.

Care and maintenance (\$46,800 each year) .....	\$98,600
For state agency (\$3000 each year) .....	6,000
Eye, ear, nose and throat specialist (\$300 each year) ..	600
Dental work (\$125 each year) .....	250
General repairs .....	1,500
Painting .....	1,200
Plumbing cottages 1, 2 and 3 .....	2,500
Bakery .....	800
One 75 kw. generator and engine .....	3,500
Refrigeration plant .....	3,000
New boiler, setting grates and fronts .....	3,500
Fire protection, including reservoir .....	2,500
Feed water heater and new pipe work .....	500
New poles and electric line to pump house .....	500

## CHANGE IN LAWS.

As the law is at the present time, the Board of Control is merely the guardian of the person of its ward. This ought to be changed, and the Board of Control made the guardian of the property as well as of the person. Many of the children have small amounts of property left them by some relative, but they are never able to derive any benefit from it, and

when they reach their majority they find that what little they had has been used up and expended in court costs and guardian fees.

I would also suggest that the laws included under chapter 80, relating to minors, Revised Statutes of 1909, relating to dependent children, be so changed that all the provisions of this article and of each and every section of the same, not now applicable, be so changed as to be applicable to the children of the State Orphans' Home; to the children in the Home, as well as those out on indenture, on trial or otherwise. The interference of relatives of the children should not be tolerated, and these statutes should be so changed as to protect the children of the Home, as well as those of the home-finding societies and other private institutions for the care of children.

#### ACKNOWLEDGMENTS.

I wish again to acknowledge, on behalf of the Home and management, our most sincere and hearty thanks for the kindly interest shown us, not alone by the people of the state at large, but I am under special obligation to the good people of Atchison, who have shown their interest in every way possible in the institution and in the children. No favor ever asked has been denied, and the loyalty of the people of this vicinity to the Home is a matter of profound gratitude on the part of the management.

Thanks are also due to our corps of loyal and efficient employees and to the Board of Control who are ever watchful of our interests.

Respectfully submitted,

EDWARD C. WILLIS, *Superintendent.*

### STATE AGENT'S REPORT.

*To the Board of Control:*

Another two years have come and gone and we are again called upon to give an account of our stewardship. What have we done? Just the same as the two years before? Well, practically, yes. We have been keeping on in about the same line of work. We have visited our children in their homes, and many of them in their schools, and find that, in the main, they are living about like other children in the neighborhood. We have extended a helping hand wherever we could to assist a boy or girl to make a start, either in doing for himself or in an attempt to fit himself for something better. We have investigated the homes offered to us, and according to our best judgment placed the children in the ones that seemed to us to offer the nearest to what we want for our children.

Am I too particular in the choice of these homes? Do I hope for too much? I have no wish to criticize the good people who help us in this great work of making men and women by taking one of these children into their homes. If they love children and youth and expect to find their recompense for their love and care in watching the child develop into a good useful citizen, or, failing in this, feel that they have done what they could for the good of humanity, then we are very grateful for this help, and we are glad that our work shows to us some of these good people. We can only wish all our people were actuated by these same noble principles.

Because children, these boys and girls, make the men and women of the future, we must be careful. Because if they do not learn the secrets of

right living in youth it is not likely they ever will. Because we almost stand aghast at the responsibility of taking up a young life and helping it to dig down and start anew the foundations of real living. Because where can we find men and women willing to do this, and then go on day after day, and day after day, holding them kindly but firmly to the performance of life's little duties according to these foundation principles—truth, honesty, justice and love for those around us—until it comes to be a habit. They not only know these great foundation principles, but they have learned, by constant practice, to do the little right, kindly, unselfish thing.

Who but a wise mother is sufficient for this great, this terrible but yet sweet responsibility. With all these things in mind, we have tried to do the best we could to help these children that an unkind fate has placed under our care.

While I have no wish to disparage our efforts, as I think we have done all that could be done under existing circumstances, and while I have no criticism to make of the authorities, as I have faith in them that they have done all they could for us, still I believe the time has come when an almost entire change in the plan of handling our children would prove highly beneficial to them and to the state as well.

Our institution is now crowded, and we can not reasonably expect that, with a growing population, our enrollment will ever be much smaller, at least for any appreciable length of time. So we will be obliged to have more room in the near future. Then we should have a well-equipped nursery, and provide for the babies.

The colored children should be cared for at some other place. I should think at some of these colored institutions that receive state aid some provision could be made for them. There are never many of them. If so desired we could still handle the placing of them in homes.

The younger children I would still place in desirable homes as fast as practicable. Much more time and money than we have ever had to use I believe could be well spent in this part of the work. But it should be the exception, not the rule, to place the older children in homes, for, except in rare cases, this is not satisfactory.

Most earnestly hoping that in the next two years we may accomplish the most good for the largest number possible with the means at hand, I am,

Very respectfully yours,

ADDA LOBDELL, *State Agent.*

## STEWARD'S REPORT.

to the Board of Control of State Charitable Institutions:

GENTLEMEN: In compliance with the law I herewith submit my report for the biennial period ending June 30, 1912, being tables 1 to 13, inclusive, under "Financial Statistics." Respectfully,

E. C. JOST, *Steward.*

## FINANCIAL STATISTICS.

TABLE No. 1. Appropriations.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
Salaries and wages:		
Appropriated for fiscal year .....	\$16,700.00	\$17,000.00
Expended during fiscal year .....	16,045.28	16,401.50
Unexpended balance June 30 .....	\$654.74	\$598.50
Maintenance and repairs:		
Appropriated for fiscal year .....	\$23,000.00	\$23,500.00
Expended during fiscal year .....	22,999.78	23,500.00
Unexpended balance June 30 .....	\$0.22	
Putting children in homes:		
Appropriated for fiscal year .....	\$1,200.00	\$1,500.00
Expended during fiscal year .....	1,190.61	1,499.84
Unexpended balance June 30 .....	\$9.39	\$0.16
Remodeling hospital:		
Reappropriated for fiscal year .....	\$141.05	
Expended balance during fiscal year .....	141.05	
Water supply:		
Reappropriated for fiscal year .....	\$1,056.76	
Expended during fiscal year .....	1,058.90	
Unexpended balance June 30 .....	\$2.86	
Painting main building:		
Reappropriated for fiscal year .....	\$3.07	
Unexpended balance June 30 .....	\$3.07	
Clothes:		
Appropriated for fiscal year .....		\$1,200.00
Expended during fiscal year .....		1,200.00
Boat Harness:		
Appropriated for fiscal year .....		\$250.00
Expended during fiscal year .....		232.20
Unexpended balance June 30 .....		\$17.80
Sanitary floors:		
Appropriated for fiscal year .....		\$177.00
Expended during fiscal year .....		162.50
Unexpended balance June 30 .....		\$14.50

TABLE No. 1—CONCLUDED.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
Repairing slate roof:		
Appropriated for fiscal year.....		\$400.00
Expended during fiscal year.....		347.75
Unexpended balance June 30 .....		\$52.25
Plumbing:		
Appropriated for fiscal year.....		\$2,500.00
Expended during fiscal year.....		2,499.89
Unexpended balance June 30 .....		\$0.11
Recapitulation:		
Total amount appropriated .....	\$42,100.88	\$46,527.00
Total amount expended.....	41,430.55	45,848.68
Total unexpended balance June 30.....	\$670.33	\$678.32

TABLE No. 2. Maintenance contingent fund.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
Cash in hands of superintendent.....	\$200.00	\$200.00

TABLE No. 3. Salary revolving fund.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
Cash in hands of superintendent .....	\$100.00	\$100.00

TABLE No. 4. Private moneys of inmates.

ITEMS.	Year ending June 30, 1911.		Year ending June 30, 1912.	
	Dr.	Cr.	Dr.	Cr.
On hand July 1.....	\$305.53		\$571.14	
Received during fiscal year.....	549.92		746.85	
Paid out during fiscal year .....		\$584.31		\$454.56
On hand June 30 .....		871.14		1,163.41
Total .....	\$1,455.40	\$1,455.40	\$1,617.99	\$1,617.99

TABLE No. 5. Purchase and issue of stores for biennial period, including ordinary repairs, maintenance and repairs fund and fees.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
Stores on hand and paid for at beginning of year:		
Commissaries .....	\$417.98	\$232.14
Property .....	1,296.04	2,152.75
Purchased and paid for during year:		
Commissaries .....	9,790.87	10,670.89
Property, not including repairs .....	12,181.96	10,832.21
Ordinary repairs .....	1,076.90	1,700.45
Extraordinary repairs .....		296.46
Fees:		
Commissaries .....		734.23
Property, not including repairs .....		430.82
Extraordinary repairs .....	1,523.71	816.81
Total to be accounted for .....	\$26,232.41	\$27,866.75
Issued:		
Commissaries .....	\$9,976.66	\$11,433.84
Property, not including repairs .....	11,265.25	11,998.55
Ordinary repairs .....	1,076.90	1,700.45
Extraordinary repairs .....	1,523.71	613.26
Remaining on hand and paid out for at end of year:		
Commissaries .....	232.14	198.92
Property .....	2,152.75	1,417.23
Total accounted for .....	\$26,232.41	\$27,866.75

TABLE No. 6. Receipts and disbursements of fees.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
Unexpended balance at beginning of year .....	\$506.52	\$32.42
Received and remitted to treasurer of Board of Control, sale of sundries .....	1,102.61	1,408.53
Total to be accounted for .....	\$1,611.13	\$1,440.95
Expended for maintenance and repairs .....		\$1,165.05
Expended for extraordinary repairs and improvements .....	\$1,523.71	813.81
Unexpended balance at end of year .....	82.42	4.09
Total accounted for .....	\$1,611.13	\$1,485.95

TABLE No. 7. Coal.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
Furnished by State Penitentiary, without freight .....	\$5,529.75	\$6,369.33

TABLE No. 8. Steward's classified report of stores, including ordinary and extraordinary repairs and improvements, showing the per capita cost, based on average number of pupils—196 first year and 209 second year.

Fourth biennial report to the State Board of Control, for the two years ending June 30, 1912, the same being the sixteenth biennial report of this institution.

## SUPERINTENDENT'S REPORT.

---

*To the Board of Control of State Charitable Institutions:*

GENTLEMEN—I herewith submit for your consideration the sixteenth biennial report of the Boys' Industrial School, covering the biennial period ending June 30, 1912.

During this period 232 boys were received from the juvenile courts of the state. Two hundred and fifty boys were paroled during this time, and 246 were in school at the close of the period. There were 510 different boys in school, and the average daily population was 254.5 for the two years. Details of the movement of population will be found in the table accompanying this report.

### REPAIRS AND IMPROVEMENTS.

The buildings and equipment have been kept in good condition and some substantial improvements have been made. From an appropriation of \$1500 by the last legislature material was purchased for the construction of a vegetable cellar. This building was erected by our own labor, and affords ample storage room for the institution, providing facilities for the care of about 10,000 bushels of vegetables, besides other stores. A reinforced concrete silo with a capacity of 150 tons of ensilage was constructed, also by our own labor, at a cost of \$282 for material.

Shelters have been constructed for the young stock and for the vehicles, farm and garden utensils, several acres of waste land have been reclaimed, and numerous other minor improvements have been made.

### HEALTH.

The health of the boys has been uniformly good throughout the period. Numerous ills of a trifling nature have been treated, but no epidemic has occurred and there have been only a few cases of serious illness. One death occurred, that of a fifteen-year-old boy, on January 7, 1912. This boy developed a case of typhoid fever a few days after entering the school. He undoubtedly brought the infection with him, as no case of the kind appeared before his illness and none has occurred since.

### SCHOOL OF LETTERS

The work in the school of letters has been carried on with gratifying results. Our teachers have been well equipped for the work, both by education and experience, and have displayed a genuine interest in the problem of the backward child as he finds his way into the Industrial School. As heretofore, we have endeavored to emphasize the practical side of education, teaching the boy to do simple, practical things well, rather than insisting upon adhering to any prescribed course of study. Cultural studies have not been neglected, but due regard has been given to the need of educating, not the head alone, but the hand, the eye and the heart as well. The course of study prescribed for the use of the public schools of the state has been

followed in a general way, and boys leaving the school to enter the public schools have found no difficulty in maintaining their standing.

As stated elsewhere, the work of education in institutions for delinquents is becoming more and more the problem of the backward child. The same demands are made upon the teaching force that are made upon the teachers of the special classes for the backward and defective. Until we can improve the homes from which our delinquent population comes, or improve the stock from which it springs, the problem of the delinquent becomes more and more the problem of education. There is but one way to bring about social readjustment, and that is by way of the children, through the homes primarily, and secondarily and more definitely through the schools.

Industrial training is recognized as coördinate with the training to be had in the school of letters, but systematic instruction in industrial training as it is understood by most people is a matter of first importance to comparatively few boys who come to the Industrial School. This is true, not because industrial training or trade teaching is unimportant, but because the boy committed to the Industrial School is almost uniformly backward and poorly equipped by his inheritance, training and education to enter at once upon a course of industrial training that will enable him to enter and hold his place in the wage-earning classes. He is better equipped to begin this work when he leaves the school than when he entered it. Until the Industrial School is able to retain boys through a longer period and send them forth fully equipped to earn a living, its field is more along the line of vocational guidance. The industrial-school boy is usually the result of individual maladjustment to existing social economic conditions. His need calls for descreet guidance, based on a concrete knowledge of each individual case. A judicious exercise of this policy will enable the school to assist the boy in his choice of vocation and at the same time aid in the solution of the complex and disturbing problem of industrial efficiency.

#### RECREATION AND AMUSEMENT.

Well-selected amusement and properly supervised recreation are important factors in reclaiming youthful delinquents, and this feature of our work has been emphasized during the biennial period. An outdoor gymnasium has been constructed and facilities for outdoor exercise and recreation have been enlarged. The classes heretofore conducted indoors are now conducted in the open air when the weather permits. Especial attention has been given to outdoor games, and numerous baseball "nines" have been maintained. Due regard is had for the ethics of sport, and the importance of clean athletics of all kinds is daily impressed upon our pupils.

The indoor gymnasium work has proven very popular, and numerous invitations were received from organizations in Topeka and near-by towns to give exhibitions. Accordingly a dozen or more exhibitions were given, and without exception the boys acquitted themselves creditably.

Visits were also made by the entire school to the Topeka Midwinter Exposition, the State Fair and to other entertainments in the city. These courtesies have been appreciated by the boys, as evidenced by the gentlemanly manner in which the visits have been conducted.

**BASKETRY AND WEAVING.**

The department of weaving, basketry and raffia work established two years ago has proven a valuable addition to our industrial training. While not intended as a department of trade teaching, it has nevertheless proven satisfactory from this standpoint. Several hundred ornamental baskets have been made, and many of these have been sold, while we have woven about one hundred yards of carpet and more than two hundred rugs, most of which are in use in the institution.

**MILITARY DRILL.**

The department of physical training has been provided with Springfield rifles and other equipment by the war department at Washington, and daily instruction in military drill, including the manual of arms and "Butts Manual," has become an important feature of the work of this department. "Retreat" at sundown and battalion parade on Sunday afternoon are military ceremonies that are constant lessons of loyalty and patriotism.

**ENTERTAINMENTS AND LECTURES.**

During the winter months entertainments were given regularly every Wednesday evening. These entertainments often took the form of a lecture, illustrated with a stereopticon, upon some historical or geographical subject. At other times the Y. M. C. A., or other young people's organization furnished the program. Also a number of entertainments were given by students from Washburn College. We wish to make acknowledgment of the services rendered the school by these various organizations, and to recommend a fund of \$300 per year as an entertainment fund for providing suitable entertainments and lectures.

**Y. M. C. A. EXTENSION.**

We also wish to express our appreciation of the assistance rendered by the college Y. M. C. A. during the holiday season of each of the two years of the biennium and for the spirit of coöperation shown by this organization. It is an expression of the interest now taken by thinking people in promoting a widespread social uplift and in promoting in a practical way the "forward" movement for better things. This movement originated in the Y. M. C. A., and came as a proposal to send a gospel team of five or six young men to spend a week at the school to give to the boys whatever they could of a social and spiritual uplift. The proposal was accepted and the details of the week's work carefully worked out. Opportunities were afforded for the visitors to mingle with the boys with the utmost freedom. They were with them at their work and in the schoolroom, shared their sports with them, and brought to them in a most helpful way a message of good fellowship. The result of it all was most satisfactory. The community of interest established between the boys and their visitors was a source of encouragement and stimulation, while the visitors found great pleasure in the work they did and learned much of value to them in promoting the work of social readjustment through Y. M. C. A. extension.

We are under additional obligations to the gospel team of 1912, who followed up their work of special services by conducting a series of volunteer Bible studies during the three or four months following. Their labors met a ready and even enthusiastic response on the part of the boys, and we are sure that gratifying results followed.

**THE CHARACTER OF THE JUVENILE DELINQUENT.**

Since the juvenile court has been in operation in the state the character of the population of the Industrial School has undergone a marked change. The sifting-out process of the juvenile court, and the activity of the various organizations coöperating with the court, has resulted in reclaiming many boys who otherwise would have drifted into the Industrial School. On the other hand, this very activity has made it some one's duty to look after the wayward boys of every community, and those who fail to make good are committed to the Industrial School, whereas in former years they continued to be tolerated in the community so long as they did not commit a serious offense until they had passed the maximum age of sixteen years. As a result of all this, the boys now committed to the Industrial School are much more backward and defective than those committed under the former conditions. This makes the problem more than ever the problem of the backward child, as stated elsewhere, and also makes the problem much more difficult than before and the results more unsatisfactory. Of the 20 per cent whose mental age is five or more years behind their physical age, not one can ever become a normal, self-supporting citizen. Most of them will remain fit subjects for the state institutions or will become the antisocial ne'er-do-wells whose unrestrained existence can result only in the perpetuation of a class of degenerates of no worth to the state or to the social body. The state should do more than it has done to disseminate a knowledge of the evils of moral and physical degeneracy and feeble-mindedness. Unchecked it will remain a dead weight upon the social and economic wealth of the state and will continue to grow unless restricted by wise legislation and judicious teaching.

**THE STUDY OF THE JUVENILE OFFENDER.**

In recent years, with the breaking away from the congregate system of dealing with young offenders, and the reduction in the size of the family units in all institutions for juvenile delinquents, there has been a corresponding emphasis laid upon the study of the personality of the offender. The only rational approach to a correct dealing with a given offender is through an intimate, accurate and scientific knowledge of his personality. The Kansas Industrial School, like most similar institutions in the United States, is filled to its capacity most of the time. The average daily population of this institution during the biennial period just ended was 4.5 greater than the number of beds in the institution, while at one time there were twenty-six more boys than beds. This congested condition keeps our family units too large, as stated in the fifteenth biennial report, and renders impossible this intimate personal knowledge of the individual boy on the part of the family manager. Classification and segregation of the population is impossible under these conditions, but there is a wide field for observing and recording data that must be of immense importance to those dealing with this abnormal population. Without exception the authorities upon the genesis of crime attribute it to the disordered personality of the individual. This is true to such an extent that several juvenile psychopathic institutes have been established, and the psychopathologist has become a necessary adjunct to the juvenile court. The importance of this work is becoming generally recognized, and in a few years it will become a feature of the work of all institutions for offenders, both adult and juvenile. We

believe the day is approaching when the characteristics of the juvenile offender will be so accurately evaluated that the courts can be definitely informed of certain individuals that are so certain to become confirmed recidivists and to be a menace to society that permanent segregation is necessary. Whatever may be the ultimate results, however, of such a study, this institution is endeavoring to keep in touch with the progressive movement along these lines. In connection with this work we wish to acknowledge the cheerful coöperation and valuable assistance of the Kansas Medical College of Topeka and of the department of education and department of physical training of the State University.

Through the coöperation of these institutions, the work begun by the school several years ago has been carried on and the way has been opened for a still more exhaustive study of the problems involved.

#### RECOMMENDATIONS.

Following is a statement of the appropriations recommended for the ensuing two years:

	1914.	1915.
Salaries and wages .....	\$19,000	\$19,000
Maintenance and repairs.....	36,000	36,000
Stock and tools.....	2,000	2,000
Rewards and premiums.....	1,200	1,200
Expense of paroling boys and looking after them .....	1,800	1,800
Additional land .....	20,000	
Repairs and sanitary equipment of old buildings .....	2,500	1,500
Books, periodicals and pictures .....	500	250
Repairing water and steam mains and constructing tunnel for same.....	3,500	
New bakery .....	2,800	
Rotary oven and equipment.....	1,500	
New mangle and equipment for laundry .....	1,200	
Entertainment and amusement .....	300	300

In conclusion I wish to thank your honorable body for the many courtesies extended during the biennial period. I wish also to express my appreciation of the cheerful coöperation of officers, teachers and employees.

Very respectfully submitted.

H. W. CHARLES, *Superintendent.*

#### PAROLE AGENT'S REPORT.

The experiences of the past two years have not differed much from that of years gone before. The same problems met us, the same difficulties confronted us, the same results encouraged us. The enlarged appropriation enabled us to extend the work somewhat and cover a wider field.

Your agent made 435 trips to ninety-one different places, made 847 visits to boys on parole, and 668 to others concerned, such as court officials, parents, guardians and people wanting boys, and traveled 48,286 miles.

During the period we paroled 250 boys and returned 58. Of the boys paroled 40 went to other states and were beyond our reach for personal oversight, yet we kept in touch with most of them by correspondence. Occasionally one of them would drift back to Kansas, and in a few cases back to the school. The parents of many boys are shiftless, migratory and restless, dragging their families about from place to place, and the unfortunate children never know the advantages of a permanent home.

New homes were secured for forty-eight boys. The homing of homeless boys is very difficult. Few good homes are asking for our boys, and poor homes are not desirable. Most people asking for boys want such as are large enough to do a man's work, but are not willing to give them a man's wages. Such boys will not long submit to injustice in wages or other treatment. Another thing to contend against is the fact that boys coming from towns and cities do not take to country life, the lonesomeness being more than they can endure.

So most of our paroled boys go back to their own people, most of whom can do but little for them; but the home instinct is strong in the boy's heart, and to him, however humble, there is no place like home.

We have had on parole an average of 419 boys to look after, visit, counsel and direct in that which is for their best good. This is the most important part of the parole agent's work. A timely visit often prevents trouble. Parents welcome the agent as they feel the boy getting beyond control. The boy recognizes the agent as one having authority and the power to return him to the School. It has been physically impossible to visit all the boys, for they are scattered over a large territory, and it takes time to travel, as well as hard cash.

The parole agent is expected to investigate homes before the boy is paroled thereto. This is important, as it gives him a knowledge of home conditions and enables him to make acquaintance with the home people. He can and does advise with parents as to the best methods of managing the boy. The great majority of parents are ignorant of proper child training. Where there are stepfathers or stepmothers there is more or less friction in the home, and the boy suffers the consequences. There is work enough in this line of effort to occupy the parole agent's whole time in advising and instructing parents.

When reports come to the office of a boy being in trouble and should be returned, a prompt response is expected. The agent does not accept the charges made against the boy as correct, but investigates for himself and takes the boy's part in the defense. Where it is wise to do so, the boy is given further probation, and a goodly number have made good after being put on a second trial at home. Where the offense is flagrant the boy is returned to the School.

During the biennial period fifty-eight boys have been returned. All this, together with necessary office duties, keeping records, etc., has kept your agent busily employed every day of the closing period. He has lost no time by sickness, has taken no vacation, met with no accident, and has been on the road in all sorts of weather most of the time. He has not done all he wanted to do, but has done what he could, and submits this report in the hope of approval, thankful for the help and encouragement of the superintendent and Board of Control.

M. F. MCKIRAHAN,  
*Chaplain and Parole Agent.*

## STEWARD'S REPORT.

To the Board of Control of State Charitable Institutions:

GENTLEMEN—In compliance with the law I herewith submit my report for the biennial period ending June 30, 1912, being tables 1 to 12 inclusive.

Respectfully,

H. E. DANKS, *Steward.*

## FINANCIAL STATISTICS.

TABLE No. 1. Appropriations for current expenses.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
<b>Salaries:</b>		
Appropriations for fiscal year.....	\$18,700.00	\$18,700.00
Expended during fiscal year.....	18,283.97	18,893.04
Unexpended balance June 30 .....	\$416.03	\$306.96
<b>Maintenance and repairs:</b>		
Appropriated for fiscal year.....	\$36,000.00	\$36,000.00
Expended during fiscal year.....	35,453.66	35,430.90
Unexpended balance June 30 .....	\$546.34	\$569.10
<b>Fee account:</b>		
July 1, 1910, amount reappropriated.....	\$200.02	
Collected during fiscal year.....	1,125.15	
Total.....	\$1,325.17	
Expended for maintenance and repairs during fiscal year.....	1,322.03	
Unexpended balance June 30.....	\$3.14	
July 1, 1911, amount reappropriated.....		\$3.14
Collected during fiscal year .....		2,096.91
Total.....		\$2,100.05
Expended for maintenance and repairs during fiscal year.....		14.86
Unexpended balance June 30 .....		\$2,085.19
<b>Recapitulation:</b>		
Total amount spent from maintenance and repairs, and fees, fiscal year.....	\$36,775.69	\$35,445.76
Total amount expended from salary, maintenance and repairs, and fees.....	55,059.66	53,828.80
Total amount unexpended in state treasury, salary, mainten- ance and repairs, and fees, June 30 .....	965.51	2,961.25

TABLE No. 2. Special appropriations.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
<b>Stock and tools for industrial building:</b>		
Appropriated for fiscal year.....	\$2,000.00	\$2,000.00
Expended during fiscal year.....	1,980.12	2,000.00
Unexpended balance June 30.....	\$0.88	
<b>Reward and premium:</b>		
Appropriated for fiscal year.....	\$1,200.00	\$1,200.00
Expended during fiscal year.....	1,200.00	1,200.00
<b>Parole agent and expenses:</b>		
Appropriated for fiscal year.....	\$1,200.00	\$1,500.00
Expended during fiscal year.....	1,199.97	1,404.09

Fourth biennial report to the State Board of Control, for the two years ending June 30, 1912, the same being the twelfth biennial report of this institution.

(161)

## SUPERINTENDENT'S REPORT.

*To the Board of Control of State Charitable Institutions:*

GENTLEMEN—Another biennium of institutional life is numbered with the past. As we recount the opportunities that have come to us to help and strengthen the weak ones, we must turn on the searchlight of truth and examine ourselves to know whether we have discharged our duty aright. Are our girls stronger morally? Do they have a deeper regard for the truth? Do they have a higher sense of honor and integrity? Do they think right thoughts? Is their past life repulsive to them? If so, we may rest assured that our labor is not lost. The joy that comes to the one who trains and directs aright is compensation enough; to be able to do this is to live the *larger life*; to see the possibility of the jewel, though now it be incruited in the mud and filth of despair.

It is scarcely necessary to say that the most formidable problem that confronts us in the work of reclaiming our girls is to find suitable instructors. Our girls yield quickly to good teaching and good influences; hence the necessity of having the ones who teach strong in mind and thought, and at the same time persons who realize that there is no nobler charity than that which seeks to lift up from an unfortunate condition girls that are weak in the very qualities that are necessary to true womanhood.

While our first thought should be the girl, it should extend beyond the girl to the home from whence she came. Whatever destroys the family smites the foundation of social order. The need of the home life being preserved has perhaps never been more fully realized than at the present time. Industrial-school workers must realize the need of broadening their field of labor, not only to the saving of the boys and girls under their training, but, through them, each member of the family group whose hearthstone has been shattered. "It is surely in accord with a humane and enlightened public policy that a reunited family may thank the wisdom of any state for so training their children that they may win back the imperiled heritage of home." I am glad to say that in our beloved state of Kansas many homes have been strengthened and brought together in this way. I sometimes feel that I would like to make a plea to the mothers of Kansas. I would like to picture to them how glorious life might be made to our boys and girls if in their tender years they could be led to recognize the good lying at the heart of all things; if they could train their children to be simple and sweet, to be humble and childlike, and therefore strong, keeping their faces always to the light, loving the right and standing in fear of nothing save wrongdoing.

There is no one more deserving of respect than the fathers and mothers who have faithfully and self-sacrificingly done their best for a large family of children and brought them up to be a help to the world. All the cost and expense of training boys and girls in our reformatories and industrial

schools is a necessity, in a large degree, because some fathers and mothers have failed to do their duty.

"As out of the heart are the issues of individual life, so out of the home are the issues of social life. The home is an instrument for good or ill, mightier than the school or the press or the pulpit."

#### SCHOOLS.

Education here means more than just an education of the mind. The eye and hand are trained by means of basket weaving, wood carving, clay modeling, rug weaving and bead work, as well as the education more pronouncedly belonging to the kindergarten. Special attention is given to artistic training, which here reaches its most exquisite development in watercolor and china painting. The educational work of the School embraces grades from the primary to a complete course in high school. The fact that many of the girls go out to enter the high schools of the state without demotion is an evidence of the thoroughness of the work done. Many of our paroled girls pursue their school work after leaving the School, and in their work compare favorably with young women having better advantages in the start.

#### LIBRARY.

Our library is carefully selected and well suited to the needs of the School. Strange as it may seem, the proportion of even strong, wholesome fiction seems small compared with the number of books that impart desirable information in an attractive form.

#### DOMESTIC ECONOMY.

Here the girls are given such a course as may be found in any woman's college having this training in its curriculum. In a cheerful classroom the girls are taught the chemical composition and hygienic use of food stuffs, the foundation principles of bread making and eatable cookery, how to set a table and serve a meal, the proper management of a home, the duties of mistress and maid, the etiquette of entertaining, the neatest way to darn an ugly snag, how to miter corners, and a thousand other things. Their instruction is by no means confined to theory. In a neat workroom are their beautiful work cabinets, with their scoured tops and neatly kept compartments. In the pantry are their cooking utensils, shining beautifully clean and sweet. Here our girls have practice in actual home keeping according to the best and most sanitary methods.

In the laundry, the sewing room, the bakery and the various kitchens of the institution the girls receive instruction while gaining experience through conducting the actual work of the School. No girl can complete her course without learning to wash and iron, make her own clothes, bake good bread and prepare wholesome food.

#### ART DEPARTMENT.

In addition to the instruction given in the use of the needle in the domestic-economy department and the sewing room, a special art department is maintained for such girls as have special ability or taste for this work. But it is not to be considered a merely ornamental accomplishment. In this day, when beautiful handwork is popular and commands a high price, the skilled needlewoman is assured a comfortable livelihood.

**MUSIC DEPARTMENT.**

As we make especial study of the delinquent girl we find that musical training is one of the best means of developing the will power. The painstaking drill and self-determined discipline required go far toward forming habits of self-control and the resistance to mere inclinations. The discipline here is exacting and the drill thorough. The music of the School is under the direction of a skilled supervisor. We deem ourselves exceptionally fortunate in securing so able an instructor as Miss Arletta Rinehard. She has had years of experience, besides having had special instruction under W. S. C. Matthews in piano music and Mrs. Jessie L. Gaynor in harmony. An excellent orchestra is maintained through her efforts, and our girls are capable of furnishing a most pleasing entertainment.

**STENOGRAPHY DEPARTMENT.**

Thirty-two girls are found in the stenography department, all of whom are deeply interested in their work. This department has grown to be an educational force in our institution. Not only principles of typewriting and shorthand are taught here, but business principles as well, all of which broaden the girl's conception and prepare her for usefulness in the work of life.

**HISTORICAL.**

Prior to the enactment of the first law relative to the establishment of the State Industrial School for Girls, there was maintained by private subscriptions and donations a Home for girls where they could be taught to work and be educated. The School at that time was under the management of the Woman's Christian Temperance Union, and was kept up largely, through the efforts of Mr. and Mrs. Charles H. St. John, by donations from the various Unions throughout the state. The house rent, salaries and fuel were paid for by Beloit people. The first building occupied by the Home was a neat nine-room cottage in the northeast part of the city of Beloit, known as the William Kinsley residence. From here the Home was moved into a much larger stone building on the corner of Main and Bell streets, where it was maintained until it passed under state control and became known as the State Industrial School for Girls.

The various ones who have superintended the work up to the present time are as follows:

Miss Mary Marshall.....	1888 to 1891.
Miss Martha P. Spencer.....	1891 to 1893.
Miss Fannie Haun.....	1893 to 1895.
Mrs. S. V. Leper.....	1895 to 1897.
Mrs. Phoebe J. Baer.....	1897 to 1899.
Mrs. Hester Hanback.....	1899 to 1901.
Mrs. Julia B. Perry.....	1901 to 1912.

The first 80 acres of the 200 that now belong to the School was donated by Beloit to the state of Kansas to establish the institution as a State School.

The Kansas Industrial School for Girls was established by an act of the legislature during the year 1889. The School is located one mile north of the city of Beloit.

At the time the School was established there was an appropriation of

\$25,000 made for the erection of the main building. Previous to this time the School had been maintained by private subscriptions and donations.

In the year 1895 the west cottage was erected and furnished, at a cost of \$34,000; the detached hospital, a one-story frame building, was built, furnished and equipped for \$2500. This building has since been converted into a men's cottage. No man employed at the institution sleeps or rooms in the institution proper. The clerk's cottage is a one-and-one-half-story frame building, erected at a cost of \$1000; the boiler house and laundry building was completed and equipped for \$10,000. Owing to the damage that resulted from fire the night of November 6, 1900, it became necessary to make an appropriation of \$5000 for repairs. The east cottage was completed and furnished in 1901, at an expense of \$25,666. In 1902 a stock barn was erected, at a cost of \$430. In the fiscal year 1906 a general department cottage was erected and equipped at a cost of \$15,000, and in 1907 a new school building was erected and equipped at a cost of \$30,000. This building contains ten schoolrooms, a gymnasium, and a fine, large music room. Shower baths are provided, and everything is arranged for the comfort and general welfare of the girls. In 1908 a new hospital was erected and equipped at a cost of \$4000, and in 1909 a second department cottage was erected and equipped at a cost of \$15,000.

During the year 1911 a new laundry, which was much needed, was erected and partly equipped with new machinery at a cost of \$8000; also an implement barn was erected for \$799.97; a new hay barn for \$1258. This last was paid for out of the fee fund. New boilers were installed at a cost of \$3995.56, and general repairs to the amount of \$1485 were made.

#### FEE FUND.

On hand at beginning of biennium ending June 30, 1912,	\$1,030.34
Received during biennium from fees .....	5,846.38
Expended during biennium from fees .....	3,860.77
On hand at end of biennium .....	3,016.40

The following improvements were made from the fee account during the last biennium:

Repairs on steam line .....	\$12.00
Repairing cisterns .....	12.00
Surveying for walks .....	22.00
Hotbeds .....	24.65
Pulling stumps .....	45.00
Cement sidewalks, etc. ....	168 00
Trees and shrubbery .....	378.08
Brick walks, etc. ....	333.61
Fourteen cows .....	1,040.00
Hay barn .....	1,258.00

#### SALARIES.

Owing to the amount of work done and the standard of work required, the superintendent is worthy of more remuneration than she receives. The institution has quadrupled itself in duties and responsibilities in the last eleven years, and has at all times manifested a high standard of excellence. The salary now paid is not commensurate with that of other states where like work is required. Kansas people are anxious to stand first in quality of work done, and surely are willing to appropriate funds according to the demands they make. If you can conscientiously recommend an increase of

salary in her behalf, she will not only appreciate the same but will assure you that you will ever have reason to feel that the money has been wisely appropriated.

#### OFFICERS NEEDED.

One farmer, an officer for the bakery and a general utility officer are needed. We should also have another engineer for relief work during extreme weather.

The need of a telephone system being installed as a matter of convenience appeals to me as a real necessity. I would advise that this matter be taken under advisement and funds set apart for same.

#### COURSE OF LECTURES.

There is no one thing that would bring more of brightness and cheer, and at the same time give food for thought, than a course of lectures carefully arranged for our girls. I would recommend that an appropriation be allowed for this specific purpose.

We need additions to our library in the way of books. Our girls love to read, and money can not be more wisely expended than in good, wholesome literature. An appropriation of at least \$500 ought to be secured for this purpose from the next session of the legislature.

#### APPROPRIATIONS.

I would recommend the following appropriations for the next biennium:

	1914.	1915.
Salaries and wages.....	\$16,500	\$16,500
Maintenance and repairs.....	30,000	30,000
General repairs.....	2,000	2,000
Books and periodicals.....	250	250
Auditorium.....	30,000	
Enlarging dining room.....	1,000	
Changing chapel to dormitories.....	2,000	
Piano for chapel.....	600	
Boiler.....	2,000	
Equipping laundry.....	1,000	
Dairy barn.....		5,000
Land, 160 acres.....		16,000
Horse barn.....		1,500
Total.....	\$85,350	\$71,250

Another boiler seems a necessity to the proper heating of our buildings. Our laundry is badly in need of proper equipment.

Owing to the fact that the piano we have is almost past use, I would also recommend the purchase of a new piano for use in chapel until such a time when we secure our auditorium. The cost of such a piano—a "baby grand"—would probably be about \$600.

#### LANDSCAPE GARDENING.

It is not expected that the girls can do much toward putting the institution on a self-supporting basis, yet their efforts in ornamental gardening go far towards supplying their tables and furnishing a surplus of summer vegetables, which are placed on the market. Each year our girls put up thousands of quarts of fruit and vegetables. Our gardens are beautiful, and attract the attention of many people.

## DAIRYING.

This is another department in which our girls are interested. They attend to the milking and butter making. We have a herd of thirty-two cows and four heifers. Our herd was increased by adding fourteen Holstein cows, together with a fine thoroughbred animal. Our girls enjoy the good, sweet milk to drink and always like to be on the milking force.

## PUNISHMENT.

Everyone is interested to know what methods of punishment are employed in our institution. Corporal punishment is forbidden under all circumstances. The credit or merit system is employed, and a girl may shorten her period of detention or stay the full time according as her conduct shows her fit or unfit to leave the institution.

The real reforming power lies not in any one thing as the method of correction or religious influence, but in the organization of the whole; the various departments are so many tools directed toward the accomplishment of the salvation of the girl. The girl herself becomes a part of the management.

## FARMING.

Our farm work is under the supervision of a head farmer, Mr. B. E. Walters, and his assistant. Every foot of our farm, excepting pasture land, is under cultivation. The yield from our farm, together with stock raised and sold, proves a very profitable investment for our institution. The farm consists of 200 acres under cultivation.

This last biennium we have turned into our fee fund \$5846.38, besides furnishing ourselves with potatoes, alfalfa, pork and lard.

In this report you catch a sort of a panoramic view of our institution. The scenes are shifted so quickly, though, that I fear the whole may appear to you as a great automatic machine with machine methods; but when we remember the happy, contented spirit that prevails everywhere, as we view the changed life of the girls, as we call before our mind's eye the ones that are making good, as we again look at the reunited home that the girl has been the means of bringing together, we feel encouraged, and a cry goes out from our hearts that hundreds of young women, the best our land affords, would devote their lives to the salvation of unfortunate girls. We that are engaged in the work surely see and recognize the need of such work being done, and if the best work is accomplished the humanitarian methods that will prove effectual must be ushered in in all their fullness, that such ones may be saved from the influence of their own misdeeds and inherited defects.

In conclusion, I desire to say that the last biennium has been one of steady growth and prosperity. Our institution is on stronger footing to-day as an institution of reform than at any previous period. Our girls have higher ideals, peace reigns in our midst, and our energies are being expended in well-directed lines to bring even better conditions to pass.

To you, as a Board, I desire to express my appreciation for the interest you have always manifested in furthering the good of the work and your constant and loyal support.

Respectfully submitted,

JULIA B. PERRY,  
*Superintendent.*

## STEWARD'S REPORT.

To the Board of Control, Topeka, Kan.

GENTLEMEN—In compliance with the law, I herewith submit my report for the biennial period ending June 30, 1912.

Respectfully,

J. E. BAIRD, Steward.

## FINANCIAL.

TABLE No. 1. Appropriations.

Items.	Year ending June 30, 1911.	Year ending June 30, 1912.
<b>Salaries:</b>		
Appropriation.....	\$15,700.00	\$16,000.00

Fourth biennial report to the State Board of Control, for the two years ending June 30, 1912, the same being the eighteenth biennial report of this institution.

(177)

## SUPERINTENDENT'S REPORT.

*To the State Board of Control:*

GENTLEMEN—I have the honor of submitting for your consideration the eighteenth biennial report of the Kansas School for the Blind.

### HEALTH OF PUPILS.

There have been no deaths in the School during the biennium, and the general health of the pupils has been better than for several years. We think this condition in a measure is due to the interest awakened in outdoor play and to the lengthened periods of gymnasium and field exercises taken by all pupils in regular gymnasium suits and followed by a daily shower bath.

### SANITARY CONDITIONS.

The sanitary conditions are good. The ventilation has been much improved during the biennium. Transoms have been placed above many doors, the old flues formerly used to conduct indirect heat have been arranged as ventilation flues, and with the aid of skylight ventilators on third floor the entire main building is now in very good condition with regard to ventilation. The common drinking cup has been dispensed with and four sanitary drinking fountains installed, two in the main building and two in the school building. The common wiping towel has also been displaced, and each child has his own individual towel in a place easily accessible. The bath and toilet rooms for the pupils have also been equipped with sanitary liquid soap dishes. This is a very convenient arrangement for blind people, and prevents the spread of skin diseases. The toilet rooms in the girls' side of the main building have been rearranged, which, with new equipment, has improved them very much. The water supply is excellent.

### FIRE DRILL.

Starting with all the pupils in their dormitories, the building can be emptied in forty-five seconds, if all use the fire escapes. If part of the pupils use the fire escapes and others use the stairways, the building can be emptied in less time.

### PROGRESS OF PUPILS.

During the past two years the progress of the pupils has been steady and satisfactory. The number of failures to pass grade or do acceptable work is small.

### PRACTICAL EFFICIENCY OF PUPILS.

It is difficult for the public in general to understand how much the sightless can really accomplish in a practical way. During the biennium the girls have manufactured 76 pillow cases, 68 aprons, 21 sheets, 194 towels, 24 napkins, 17 curtains, 17 bibs. In addition to this they have done a great deal of work, as indicated in other parts of this report. The boys have manufactured sloyd articles, ropes, nets, hammocks, caned chairs for the School, and made 840 dozen brooms, which we have sold to the other state institu-

tions. The boys have also kept our pianos tuned and repaired. It is very gratifying to learn that our girls are more skillful in household tasks, more willing to undertake a difficult work and happier in all things because of their training here. That our boys, especially some of our recent graduates, are following trades learned here with marked success—some as broom makers, some as salesmen and several as piano tuners and repairers.

#### PLAYGROUND AND PLAY EQUIPMENT.

In spite of the fact that the slanting ground upon which the school is located is not suited for field and outdoor gymnasium work, we have made records of many of our pupils' efforts. The following are a few of the records made:

##### CLASS A—Boys 16 years and over.

###### Standing broad jump:

Rank 1.	George Snyder .....	9 feet 2 inches.
Rank 2.	Wayne Applegate .....	8 feet 5 inches.
Rank 3.	Walter Dry .....	8 feet 4 inches.

###### Chinning:

Rank 1.	George Snyder .....	29 times.
Rank 2.	Claude Gilson .....	22 times.
Rank 3.	Frank Ball .....	20 times.

###### 75-yard dash:

	George Snyder .....	9 seconds.
	Wayne Applegate .....	9 seconds.
	Walter Dry .....	9 seconds.

##### CLASS B—Boys 14 years and under 16 years.

###### Standing broad jump:

Rank 1.	Burton Shukers .....	7 feet 2 inches.
Rank 2.	Hobart Wantland .....	6 feet 8 inches.
Rank 3.	Donald Gibbs .....	5 feet 4 inches.

###### Chinning:

Rank 1.	Hobart Wantland .....	15 times.
Rank 2.	Paul Newman .....	12 times.
Rank 3.	Fred Timma .....	12 times.

###### 60-yard dash:

Rank 1.	Hobart Wantland .....	8 seconds.
Rank 2.	Burton Shukers .....	8 4 seconds.
Rank 3.	George Newell .....	9 6 seconds.

##### CLASS C—Boys 12 years and under 14 years.

###### Standing broad jump:

Rank 1.	Harold Andrews .....	6 feet 11 inches.
Rank 2.	Arthur Wilson .....	6 feet.
Rank 3.	Harley Boone .....	5 feet 7 inches.

###### 50 yard dash:

Rank 1.	Harold Andrews .....	6 6 seconds.
Rank 2.	Arthur Wilson .....	7 6 seconds.
Rank 3.	Harley Boone .....	8 seconds.

##### CLASS D—Boys under 12 years.

###### Standing broad jump:

Rank 1.	Walter Daniels .....	8 feet 7 inches.
Rank 2.	Richard Doolin .....	3 feet 6 inches.
Rank 3.	Joe Wheaton .....	3 feet 1 inch.

###### 40-yard dash:

	Walter Daniels .....	8.6 seconds.
	Joe Wheaton .....	10 seconds.

These records were made with a view of entering our School in the National Athletic Association of the Schools for the Blind. Sixteen schools participate in this contest. Trained physical directors are employed in the eastern schools. Where tried, the new play policy for the blind has resulted in a diminution of sickness and an increase in the effectiveness of school work. In the Kentucky school, with trained physical directors to conduct gymnasium and field work, there has been practically no sickness among the pupils for the past two years. The need among the blind for such training is even greater than for public-school pupils. We recommend sufficient appropriation to employ trained physical directors for our School and an appropriation of \$1000 to be used in leveling and equipping the northeast corner of the ground for an athletic field. The present arrangements are wholly inadequate on account of the uneven and sloping surface of the grounds.

#### SPECIAL DAYS AND PROGRAMS.

Special programs suitable for the days upon which they occur, such as Thanksgiving, Christmas, Kansas Day, Washington's Birthday, Arbor Day, etc., are given by the pupils, and prove both pleasant and profitable. One general school program and one commencement program are given each year, to which the public is invited.

#### PROBLEMS OF EDUCATION.

In considering the welfare of the blind, the problem of their higher education is a very important one, and is receiving much attention from men who have studied the question from every angle.

The School for the Blind should and does lay the foundation for an education, securing to the pupils who attend a mastery of the special devices necessary to obtain knowledge. However, after having mastered these devices and received several years' training here, I think every encouragement should be given to induce our pupils to acquire a higher education among seeing people. As it is among the sighted that they must succeed or fail, they ought not to postpone entering the seeing world until maturity. Let so long as there is no provision made to enable them to enter schools of higher learning, even the capable and ambitious ones, who might gain prominence and honor and serve as powerful incentives to their less gifted fellows, return year after year to the easy, sheltered life of this School, thus putting off grappling with the problem which they must sooner or later face—that is, to find a way to circumvent the limitations which blindness inevitably imposes upon them. I therefore earnestly recommend that the policy of New York state be given your careful consideration. By the terms of the New York law a graduate of the state school, on recommendation of the managing board, is given \$300 per annum out of the state treasury to pay for a reader for him. This bill must be approved by the president of the college, who certifies to the attendance and the acceptability of the college work. Such a law simply furnishes a student a pair of eyes and places him on a par with the seeing student. The enactment of such a law would not be burdensome to the state, for there would be comparatively few to take advantage of it. It would, however, have a great inspirational effect on the education of the blind, and the worthy could then be given the ad-

vantages of a higher education. I am convinced that this policy would work great good to the blind.

I feel that the tendency to do altogether too many things for our pupils, and give them altogether too few opportunities to learn by doing, constitutes a weakness in our system of educating the blind that should receive careful consideration. Some are deprived of the home tasks that wise parents always require their children to perform; while other, who through mistaken kindness have been shielded to their own hurt, here find a congenial atmosphere where all disagreeable tasks are done for them. There is a splendid discipline and an essential development to strong character in being made responsible for certain assigned duties necessary for the general welfare, no matter how unpleasant or disagreeable they may be. At present our pupils are required to perform the following tasks:

All pupils must make their own beds. The younger ones, of course, need the help of the supervisor for some time. The girls, under the direction of the teacher of sewing, darn their own stockings, make most of the linen required in the household, such as sheets, pillow slips, tablecloths, napkins, bibs, tea towels, and their own aprons for use in the domestic science department. The larger girls all have, by their beds, rugs which they are required to keep clean. Both boys and girls are divided into groups, and each group or set of monitors required to see that all sitting-room furniture is placed in proper position after pupils leave the rooms for study or at night. Aside from making their own beds, the boys help in keeping the broom shop in order and taking clothes to laundry. All time not required for other duties is given in the broom shop by the boys who desire extra employment. There are other duties which I feel our pupils might profitably be required to assume, yet I am compelled to withhold these helpful changes because of circumstances over which I have no control, namely, retaining my present teachers if I increase their duties, or securing additional teachers with the present salary schedule.

When dealing with a limited number of pupils such as we have here for a period of years, it is not a difficult task to discover the peculiar bent of the child's mind for any given kind of work. I am convinced we have some pupils who are not able to secure much permanent good by being compelled to complete the entire high-school course, whereas if they were allowed to follow courses planned with consideration for their abilities and limitations the results would be far more satisfactory.

#### RELIGIOUS SERVICE.

Believing that true education embraces the development of our threefold natures, namely, the physical, the mental and the moral, effort has been made to inculcate these principles of morality without which no life can be called a success. The religious teaching in the School is nonsectarian, but care is taken to teach those things that all churches agree are cardinal and essential. Chapel exercises are held during the week. The Sunday exercises consist of Sunday school in the morning, preaching in the afternoon and a young people's meeting in the evening. The Sunday preaching service has been conducted the past two years by Rev. Wm. Foulkes, pastor of the Grandview Presbyterian church; Rev. Clyde Clay Cissell, pastor of the Washington Avenue Methodist church; Rev. L. G. Morony, pastor of St. Paul Episcopal church; Rev. F. G. Beardsley, pastor of the First Congre-

gational church, and Mr. A. G. Pearson, Y. M. C. A. secretary, Kansas City, Kan. These men have been pleased to bring their best messages to the household of our institution, and their services have been highly satisfactory.

#### THE ADULT BLIND.

In this connection we wish to call attention to pages 23 and 24 in our last biennial report. The case of the person who becomes blind in middle life or later in life is truly pitiable. The first shock is one of nervous, and hence physical, prostration. Later the question arises, What can I do? We have numerous letters from many residents of Kansas along this line. All we can do at present is to write a suggestive letter, send an alphabet sheet and furnish a few other helps. During the biennium our school has been of material assistance to five men who became blind late in life.

Clifford Barnes, of Atchison, an adult, learned the broom trade, and also learned to tie hammocks and flynets. He reports that he is doing well now.

L. W. Vertrees, of Kansas City, learned the same trades.

John McAllister, of Topeka, learned the same trades. He is running a broom shop of his own and can sell more brooms than he can make.

J. E. Kemp, of Cottonwood Falls, learned the same trades. He also had his eyes operated on while at the institution, regaining his sight in one eye. He left us last spring, very happy.

W. C. Hutchinson, of Hutchinson, has taken part of a year in tuning. He has also learned to read and write the point system and handle the typewriter with a fair degree of efficiency.

In our state there are many who because of ignorance of the School, its scope and purpose, do not come to us as early as they ought. And because of this delay they remain with us years after they ought to be out in the seeing world. It seems to me that we will never reach the ones we ought to have here until we have a field agent such as is found so helpful in the Eastern schools. With all their matchless equipment, they never had enough pupils to fill their schools until this policy was adopted. Now they have long waiting lists. At Overbrook, Pa., a blind, one-armed man, who was entirely familiar with the School, its purpose and policy, was sent out over the state to find all eligible blind and report them to the school office. He was also of great assistance to the adult blind of his state who were not eligible to the School. We feel that more should be done for the adult blind.

#### STATISTICS AS TO CAUSE OF BLINDNESS.

The American Association of Instructors of the Blind has had under consideration for the past two years the preparation of a blank showing the cause of blindness of all pupils in our free residential schools. The committee having this work in charge coöperated with the Russell Sage Foundation of New York to draft a blank that would be complete in all its details. This blank has been completed, and it is the hope of the association as well as the Russell Sage Foundation that all schools will complete these statistics. I hope we will be able to carry out this work during the next year. These statistics, compiled from all schools, would be very valuable to all societies waging campaigns for the prevention of blindness.

**PER CAPITA COST.**

In comparing the financial statements of the last two biennial reports with former reports, it would seem that there has been a large increase in the per capita cost of the institution. This seeming increase is due largely to charging the school with the cost of printing done by the state printing plant, and with the price of coal received from the State Penitentiary, which was not done in former reports. In considering the per capita cost for the fiscal year ending June 30, 1912, we call attention to the fact that the sum of \$235 from the maintenance and repairs account was spent for broom material. The broom product, when sold, will be turned into the fees account. Hence this sum of \$2.83 per capita should not be charged against actual cost; but in determining actual per capita cost the sum of \$2.83 should be deducted from the cost as shown in the tables.

**IMPROVEMENTS MADE.**

During the biennium we have excavated and equipped two excellent dressing rooms under the School building, installed shower heads in the adjoining toilet rooms, and provided all pupils with gymnasium suits.

We have lengthened the gymnasium period from one-half hour to one hour daily, and stimulated interest in all physical activity inside the gymnasium and on the outside apparatus, with a marked improvement in the physical condition and general deportment of our pupils.

We have equipped the hospital basement as a domestic science department. Two rooms are used as cooking and serving rooms and one as an ironing room. The work in this department has added a great deal of interest and pleasure as well as profit to the girls of our school.

In each wing of the main building the old, steep, dark stairways leading from the second to the third floors have been displaced by easy, conveniently located and well-lighted stairways. All modern toilet facilities, including shower-bath equipment, have been installed on all dormitory floors of the main building. The entire heating plant has been overhauled during the biennium and a new system installed, thereby bringing the heating of the main building up to modern standards.

A brick wall has been removed from the south wing in both first and second floors, thus enlarging the halls, which were very narrow, and allowing space for a sitting room on the second floor.

The pupils' dining room has been much beautified by the removal of the unsightly boxes necessitated by the discarded system of heating, and the displacement of the old, worn-out window sills and wainscot for fine cement finish, enameled in white.

All the pupils' sitting rooms have been greatly improved during the biennium by the addition of carpets, sash curtains and a liberal use of paint and varnish.

From the basement to the first floor and from the first floor to the second floor on the boys' side of the main building there have been put in fine steel stairways, replacing the old, worn-out ones which have been used since the building was first built. These new ones are fireproof and very fine.

**SPECIAL NEEDS FOR THE FISCAL YEARS 1914 AND 1915.**

Our special appropriation requests are as follows:

Repairs, renewals and equipment.....	\$1,600
Painting.....	1,000
Tunnel and sanitary floor.....	1,800
New floors.....	1,000
Musical instruments.....	500
Circulating library and books.....	1,000
Electric wiring.....	500
Coal bin and remodeling engine-room.....	1,000
Relaying tile in kitchen floor and sanitary equipment.....	500
Steel ceilings.....	500
Grading northeast corner of school ground for field events.....	1,000
Remodeling school building to provide library and apparatus rooms and additional schoolrooms.....	2,500
a. A large boys' cottage. b. A teacher's cottage.	
Screens.....	500
Increase in salary schedule.....	2,500

**ACKNOWLEDGMENTS.**

We desire to acknowledge our indebtedness to the following for courtesies extended to us: To Prof. Carl Busch for complimentary tickets to the School for afternoon program given by the Minneapolis Symphony Orchestra, May, 1911; also to the Fritschy-Campbell concert direction for complimentary tickets to hear the London Symphony Orchestra, May, 1912.

In closing I wish to call attention to the general statistics, the financial tables, the physician's report and general information following this report. To the officers, teachers and employees who have coöperated to make the two school years successful I wish to express my appreciation for loyal and efficient service. To you, honorable Board, I wish to extend grateful thanks for wise counsel, for manifold suggestions, and for cordial sympathy in our relations as Board and superintendent.

Very respectfully,

W. B. HALL, *Superintendent.*

Expended during fiscal year .....	13,099.60	13,499.22
Unexpended balance June 30 .....	\$0.40	\$0.78
<b>Maintenance and repairs:</b>		
Appropriated for fiscal year .....	\$12,000.00	\$12,000.00
Expended during fiscal year .....	11,999.30	11,999.54
Unexpended balance June 30 .....	\$0.70	\$0.46
<b>Painting:</b>		
Appropriated for fiscal year .....	\$0.42	\$500.00
Expended during fiscal year .....		462.88
Unexpended balance June 30 .....	\$0.42	\$37.12
<b>Musical instruments:</b>		
Appropriated for fiscal year .....	\$585.00	
Expended during fiscal year .....	585.00	
<b>Maps, typewriters, etc.:</b>		
Appropriated for fiscal year .....	\$739.00	
Expended during fiscal year .....	739.00	
<b>New plumbing and heating system:</b>		
Appropriated for fiscal year .....		\$3,800.00
Expended during fiscal year .....		1,167.08
Unexpended balance June 30 .....		\$2,632.92
<b>Laundry machinery and supplies:</b>		
Appropriated for fiscal year .....		\$500.00
Expended during fiscal year .....		479.49
Unexpended balance June 30 .....		\$20.51
<b>Library:</b>		
Appropriated for fiscal year .....		\$500.00
Expended during fiscal year .....		167.54
Unexpended balance June 30 .....		\$342.46
<b>Remodeling basement:</b>		
Appropriated for fiscal year .....		\$550.00
Expended during fiscal year .....		529.04
Unexpended balance June 30 .....		\$30.94

TABLE No. 1—CONCLUDED.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
Remodeling east wing:		
Appropriated for fiscal year .....		\$700.00
Expended during fiscal year.....		700.00
Recapitulation:		
Total amount appropriated.....	\$28,374.42	\$32,650.00
Total amount expended.....	26,372.90	28,994.81
Total amount unexpended.....	\$1.52	\$3,655.19

TABLE No. 2. Maintenance contingent fund.

ITEM.	Year ending June 30, 1911.	Year ending June 30, 1912.
Cash in hands of superintendent.....	\$250.00	\$250.00

TABLE No. 3. Salary revolving fund.

ITEM.	Year ending June 30, 1911.	Year ending June 30, 1912.
Cash in hands of superintendent.....	\$100.00	\$100.00

TABLE No. 4. Purchase and issue of stores for biennial period.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
Stores on hand and paid for at beginning of year:		
Commissaries .....	\$142.44	\$189.87
Property .....	448.48	731.79
Purchased and paid for during the year:		
Commissaries .....	5,856.23	6,032.74
Property, not including repairs .....	4,566.56	3,988.93
Ordinary repairs .....	1,576.50	1,709.52
Extraordinary repairs.....	1,065.60	2,057.76
Totals to be accounted for.....	\$13,658.81	\$14,710.61
Issued during the year:		
Commissaries .....	\$5,508.30	\$6,097.36
Property, not including repairs .....	4,281.25	3,999.79
Ordinary repairs .....	1,576.50	1,709.52
Extraordinary repairs.....	1,065.60	2,057.76
Remaining on hand and paid for at end of year:		
Commissaries .....	189.87	125.25
Property .....	731.79	720.93
Totals accounted for .....	\$13,658.81	\$14,710.61

TABLE No. 5. Receipts and disbursements of fees.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
expended balance at beginning of year .....	\$99.06	\$413.74
received and remitted to treasurer of Board, sale of sundries, tuition.....	1,390.28	2,068.83
Totals to be accounted for.....	\$1,479.34	\$2,472.57
expended for extraordinary repairs and improvements .....	\$230.39	\$456.13
expended for industrial supplies and wages.....	835.21	1,333.28
expended balance at end of each year .....	413.74	683.16
Totals accounted for .....	\$1,479.34	\$2,472.57

TABLE No. 6. Coal.

ITEMS.	Year ending June 30, 1911.	Year ending June 30, 1912.
urchased under appropriation to Board of Control .....	\$233.04	.....
urnished by State Penitentiary.....	2,971.50	\$3,202.12
Totals.....	\$3,045.54	\$3,202.12

Fourth biennial report to the State Board of Control, for the two years ending June 30, 1912, the same being the eighteenth biennial report of this institution.

(195)

## SUPERINTENDENT'S REPORT.

*To the State Board of Control:*

GENTLEMEN—I have the honor to submit to you the eighteenth biennial report of the Kansas School for the Deaf, covering the period from July 1, 1910, to July 1, 1912.

During this biennium 286 pupils have been enrolled, being exactly the same enrollment of the preceding biennium. Of these 160 were boys and 126 were girls. Thirty-four were new pupils who were admitted during the past year. Thirty of those enrolled during the first year did not return last year, for the following reasons: Seven moved out of the state; six reached the age of twenty-one and quit to go to work; two deceased; one married; three were kept at home to work; two (were transferred to the Home for Feeble-minded Youth at Winfield; four (two colored) were graduated, in 1911; three were kept out on account of sickness at home; one was sent to the Reformatory, while at home, for forgery; and one from Pottawatomie county did not return (reason unknown). During the past year there was an increase of four in enrollment over the preceding year. Nine were awarded diplomas of graduation on May 24, 1912.

The several counties of the state have been represented in this School during the past two years as follows:

#### HEALTH.

This School is located in the thriving county seat of Johnson county, which is one of the healthiest counties in the state. The president of the board of health of the city of Olathe is our school physician. There is probably not a healthier location in the state for a school of this kind. During the winter of 1910-'11, scarlet fever was brought into the school by some of the pupils who went home, and an epidemic followed, which not only emphasized our need of a hospital building, but also for the second time in two years proved that it was unwise to permit any of the pupils to go home at that time of year, on account of the epidemics which followed. Last winter only six pupils went home for Christmas, and I am pleased to say that five of them were fully justified in going, there being a special reason in each case for granting special permission. Therefore the past year has been the most successful year from every standpoint, since we have had very little sickness and no epidemics of any kind. One death from pneumonia followed the scarlet fever epidemic—that of little Thelma Creitz, of Beloit, on February 5, 1911. Another death from mastoid abscess occurred on April 22, 1912—that of Verl Selby, of Kingman, after being confined only three days in the hospital, although he had been afflicted with mastoid trouble for several years.

#### EDUCATIONAL DEPARTMENT.

The recent legislature recognized our claim that we should be listed and recognized as an educational institution, which we are in fact and always have been, as the School was established for the education of the deaf and has no other excuse for its existence. Any other classification is not only a misnomer but an injustice to the deaf of the state—an injustice undoubtedly due to the ignorance or indifference on the part of many well-meaning persons toward the welfare of the deaf. The deaf do not want sympathy nor charity. All that they need is an education, and an opportunity. Our graduates compare favorably with high-school graduates throughout the state and are useful and respected citizens in their respective communities, as our list of graduates, printed elsewhere in this report, together with their home addresses and present occupations, easily proves.

The educational instruction comprises two distinct departments, known as the manual and the oral. This plan is called the combined system. Each pupil that enters our School is given a chance during his first year to learn speech and lip-reading. If sufficient progress is made to justify it, he is retained in the oral department throughout the entire course. Otherwise he is placed in a manual class. In the manual department the medium of communication is finger-spelling and writing. "Signs" are not taught in any of our classes, nor do we have any "sign classes." The pupils are taught the English language and how to use it. We do not encourage the use of signs, except in chapel services or at public gatherings, where finger-spelling, writing and lip-reading would be too difficult. The educated deaf throughout the country are practically unanimous in supporting the combined system of instruction. This seems to me to be fair and reasonable, as we find some pupils each year who do not seem to be capable of grasping instruction by the oral method, just as some normal children are not capable of learning to play the piano well. Then why should we persist in teaching them something that they have no liking or talent for, when their talents

or natural inclinations extend in other directions? It is impossible to teach a child against his will. If the desire is not there and the teacher is unable to create in him a desire for speech and lip-reading, it is a waste of time and energy to continue such a child in the oral department. It is no reflection upon the pupil's intellect to be in the manual department. The val-dictorian of the class of 1912 was educated wholly by the manual method.

Every deaf person is happier for his knowledge of the sign language, and we have no desire to deprive him of its use, except in the schoolroom. More than half of our pupils are in oral classes.

A class of nine was graduated in 1912, three of them from the so-called regular course and six from the advanced course. Those in the latter course have taken all branches necessary for admission to the preparatory class at Gallaudet College, while the others who were not expecting to take up any advanced work were permitted to substitute for Latin and algebra.

Our course of study comprises all the branches usually taught in the public schools, including the first two years in high school. When the pupils have completed our course of study satisfactorily and have passed the entrance examinations to Gallaudet College at Washington, D. C., they may be admitted to the preparatory class, and after five years of study complete the college course and receive the bachelor's degree.

#### INDUSTRIAL DEPARTMENT.

"There is no struggle in the history of education more heroic than the emancipation of the deaf," says *Collier's Weekly*, and there is no broader highway nor more stable footing for the struggler toward that emancipation than may be found along the avenues of industrial education.

Our school day is so divided that all pupils who are old enough spend one-third of the day in the industrial shops, so that the essentials of a useful trade may be learned and the physical powers developed along with the mental.

Pupils are instructed in carpentry, cabinetmaking, printing, shoemaking, harness making, baking, art and free-hand drawing, laundering and domestic science and art, such as cooking, plain sewing, dressmaking and fancy needlework. Some of the boys assist on the farm and garden and the girls help in the general housework.

There are two other trades that should be introduced as soon as we have funds available for the purpose, viz., painting and agriculture. The latter is especially desirable, inasmuch as the majority of our boys come from the farm and will undoubtedly return to the farm if properly instructed in that line. In this connection, with your kind permission, I should like to add as a part of this report a most excellent address on "Agricultural Education for the Deaf," delivered in our chapel by special invitation of the superintendent, on March 23, 1912, to the advanced classes of the School by one of our own graduates.

#### MANNERS AND MORALS.

As has been stated in former reports, the School discipline is good. Pupils are taught to respect authority and are encouraged by wholesome advice, from teachers and officers alike, in right ways of living and nobility of character.

Generally our pupils respond willingly, so that by kindness and firmness there is seldom need for punishment. We insist that pupils remain in the

institution continuously through the school term, as home-goers disturb the discipline and order of the schoolroom work and endanger the whole school to contagious diseases.

#### SALARIES.

Custom and experience prove that all teachers and employees should be employed under a gradually increasing scale of wages. Experience counts for so much in teaching and caring for the deaf that even the most successful teachers in public-school work are helpless among the deaf. It requires special training and several years of mingling and working with the deaf to make really successful teachers. Therefore, strictly as a business proposition, it does not pay the state to hire cheap, inexperienced teachers nor to obtain new ones every year. Teachers of experience and ability are sought by superintendents of similar schools all over the country. Therefore, in order to secure or retain good teachers, we must pay salaries in proportion to those in similar schools in other states.

#### CHANGES IN OUR FACULTY.

We lose both of our hearing men this year for the reason, as I am advised, that the two are to receive about \$500 per year more salary elsewhere than our maximum paid to men. It seems to me that this is the strongest argument that could be produced in favor of raising the maximum. It should be fixed not lower than \$1200. A man properly equipped who is not worth that much is not worth anything. If he earns it it should be paid to him, and if he does not he should be fired.

#### REPAIRS AND IMPROVEMENTS.

The appropriations made at the last session of the legislature have been and are being judiciously expended for the purposes designated, and are very satisfactory and are thoroughly appreciated. I may be pardoned for calling attention to one point that our ways and means committees seem to have overlooked. The appropriation of \$1500 per year for repairs and improvements may have been adequate for all needs when the buildings were new, but some of them are now twenty, thirty, and even forty years old, and therefore require more repairing in order to keep them in good condition, but the appropriation still remains the same. There has been no increase in this fund for a great many years. This amount should be doubled. We should have at least \$3000 per year, or \$6000 for the biennium, for repairs, etc.

#### MAINTENANCE.

Owing to the increased cost of food products and practically all other materials, one-half of our appropriation for maintenance, which was not increased over the amount granted for the preceding biennium, was all gone in less than ten months. All expenditures were made with the utmost care and economy, and had it not been for our fee account it would have been impossible to have gone through the year. We sold off our hogs, and were thus able to squeeze through. What if all of our hogs had died? We should probably have been compelled to close School a month earlier. I do not believe that the legislature would permit us to live from "hand to mouth" in this way, for if the facts were known our appropriation for maintenance would be sufficiently increased. What if we had a few dollars more

than were actually needed? The state would lose nothing, as all money not used would go back to the state. Therefore I insist that our appropriation for maintenance be increased to \$50,000 for the biennium.

## SUMMARY OF SPECIAL NEEDS.

Hospital.....	\$20,000
Athletic field and equipment.....	1,200
Paint and labor.....	1,500
Roof for main building.....	1,500
Cement floors.....	5,000
Concrete porches.....	1,650
Front porch.....	1,500
Steel ceilings.....	1,000
Cement walks and labor.....	2,000
Ventilating schoolhouse.....	3,500
Water supply.....	1,000
Tunnel and conduit to schoolhouse and hospital.....	4,120
Refrigeration plant.....	1,500
Filter.....	1,500

## ESTIMATED CURRENT EXPENDITURES FOR BIENNIUM.

Salary of superintendent.....	\$3,600
Salary of all teachers and employees.....	65,000
Repairs and improvements.....	6,000
Library.....	400

## JUBILEE CELEBRATION.

On November 25, 1911, the fiftieth anniversary of the establishment of the first School for the Deaf in the state of Kansas was celebrated by an elaborate program in the School chapel. Fully one thousand persons were present on that occasion. The speeches and addresses made on that memorable occasion were published in the *Kansas Star*. The following program was carried out.

*Jubilee Program.*

Invocation, . . . . .	HON. J. W. PARKER.
Song, "America," . . . . .	BY DEAF PUPILS.
Introductory Remarks, . . . . .	BY THE SUPERINTENDENT.
Addresses for the City, . . . . .	{ HON. G. W. GORSUCH, Mayor, Ex-Gov. J. P. ST. JOHN.
Address for the County and District, . . . . .	SENATOR G. H. HODGES.
Song, "When the Sunflowers Bloom," . . . . .	BY LITTLE TOTS
Address for Educational Kansas, . . . . .	PRES. W. N. MASON, Baker University.
Address for the Profession, . . . . .	SUPT. A. A. STEWART, Sulphur, Okla.
Address for the School, . . . . .	MR. A. L. ROBERTS.
Khaki Drill, . . . . .	MR. LUTHER H. TAYLOR, Athletic Director.
Outline History of the School, . . . . .	HON. CHARLES H. HYER.
Address, The Deaf as Citizens, . . . . .	SUPT. S. T. WALKER, Fulton, Mo.
Address for the State, . . . . .	HON. CHAS. D. SHUKERS.
Song, "Kansas," . . . . .	BY MISS KATHARINE R. MELDRUM.
Benediction—The Lord's Prayer, . . . . .	LED BY PROF. H. C. HAMMOND.

**ACKNOWLEDGMENTS.**

The management wishes to thank the publishers of the papers and magazines received during the biennial period. Part of them were received in exchange for our school paper, "*The Kansas Star*," and others merely through the courtesies of the publishers.

I do not wish to close a report of this kind without a grateful acknowledgment to the Divine Father for the measure of success that has attended the united efforts of all officers, teachers and employees in their work, believing that these efforts have been for the best interests of the deaf children of the State.

Respectfully submitted.

CYRUS E. WHITE, *Superintendent.*

## APPORTIONMENT OF STATE APPROPRIATION.

Chapter 46 of the Laws of 1911 appropriates to the private charitable institutions of the state \$15,000 for the year ending June 30, 1912, and \$15,000 for the year ending June 30, 1913, the same to be apportioned by the State Board of Control under conditions prescribed by sections 1 and 2 of the above-named chapter. Following is a list of institutions receiving aid for the years ending June 30, 1912 and June 30, 1913, with the amount apportioned to each:

INSTITUTION.	1912.	1913.
Wichita Children's Home, Wichita.....	\$500	\$500
Lutheran Home for Friendless Children, Winfield.....	300	300
St. Joseph's Orphanage, Wichita.....	300	300
Goodlander Home, Fort Scott.....	400	400
Children's Home, Kansas City.....	500	500
Children's Home Association, Iola.....	500	500
Orphans' Home of the Kansas Conference of the Aug. Synod, Cleburne.....	300	300
Sunflower Home (Colored), Lawrence.....	100	100
Topeka Orphans' Home Association, Topeka.....	500	500
Guardian Angel's Home (Colored), Leavenworth.....	400	400
St. Vincent's Home, Leavenworth.....	400	400
Children's Orphans Home (Colored), Kansas City.....	200	200
Home for the Friendless, Parsons.....	500	500
Florence Crittenton Mission (Colored), Topeka.....	500	500
Hutchinson Refuge Home, Hutchinson.....	300	300
Foster Humane Society, Topeka.....	100	100
Kansas State Protective Home Association (Colored), Leavenworth.....	500	500
Topeka Association for Study and Prevention of Tuberculosis, Topeka.....	100	100
Sedgwick Home, Wichita.....	200	200
Holiness Industrial Children's Home, Fort Scott.....	100	100
Wichita Rescue Home, Wichita.....	300	300
Associated Charities of Wyandotte County, Kansas City.....	200	200
Florence Crittenton Mission, Topeka.....	500	500
Kansas Association for Friendless Women, Leavenworth.....	300	300
Ladies Benevolent Society, Cottonwood Falls.....	200	200
Industrial School and Hygiene Home for Friendless, Hillsboro.....	400	400
Rose-Tillotson Home for the Aged, Fort Scott.....	100	100

INSTITUTION.	1912.	1913.
Douglas Hospital and Training School (Colored), Kansas City.....	\$200	\$200
St. Margaret's Hospital, Kansas City.....	200	200
St. Francis Hospital, Wichita.....	200	200
St. John's Hospital, Leavenworth.....	200	200
Bethel Deaconess Home and Hospital Society, Newton.....	200	200
St. John's Hospital, Iola.....	200	200
Clay Center Hospital Association, Clay Center.....	100	100
Axtel Hospital, Newton.....	100	200
Mennonite Charite (Halstead) Hospital, Halstead.....	100	100
Arkansas City Hospital Association, Arkansas City (Mercy).....	200	200
Mercy Hospital, Fort Scott.....	200	200
Bethesda Hospital, Goessel.....	200	200
Wichita Hospital and Training School.....	200	200
Garden City Hospital, Garden City.....	100	100
St. Anthony's Hospital, Hays.....	200	200
Mt. Carmel Hospital, Pittsburg.....	200	200
Pittsburg City Hospital, Pittsburg.....	200	200
St. Mary's Hospital, Winfield.....	200	200
Christ's Hospital, Topeka.....	200	200
St. Barnabas Hospital, Salina.....	200	200
St. Rose Hospital, Great Bend.....	200	200
St. Joseph's Hospital, Concordia.....	200	200
St. Francis Hospital, Topeka.....	200	200
Sterling Hospital and Training School, Sterling.....	100	100
Larned Hospital, Larned.....	100	100
Cassandra Hospital, Atwood.....	100	100
Parkview Hospital, Manhattan.....	100	100
Bethany Hospital, Kansas City.....	200	200
Dykes Hospital, Stafford.....	100	100
St. Luke's Hospital, Wellington.....	200	200
Arkansas City Hospital and Training School, Arkansas City.....	100	100
Kansas Sanitarium, Wichita.....	200	200
McPherson Hospital, McPherson.....	...	100
Winfield Hospital, Winfield.....	...	200
Jane C. Stormont Hospital, Topeka.....	...	200

A voucher in the sum of \$200 was drawn in favor of St. Anthony's Hospital of Hays, but the officers of that institution never returned the same to the Board's office for approval. Under the law the appropriation lapsed on July 1, 1912, and St. Anthony's will not receive the benefit of the \$200 allowed by the Board.

## VISITS TO PRIVATE INSTITUTIONS.

FOR THE BIENNIAL PERIOD ENDING JUNE 30, 1912.

<i>Institution.</i>	<i>By whom made.</i>

Wichita Hospital, Wichita.....	H. C. Bowman.
St. Rose Hospital, Great Bend.....	H. C. Bowman.
Larned Hospital, Larned.....	H. C. Bowman.

## SOLICITING BY PRIVATE INSTITUTIONS.

Under chapter 132, Session Laws of 1911, an act relating to the soliciting of funds by private benevolent or charitable institutions and the granting of certificates to the same by the Board of Control, the Board issued to the following institutions certificates for the year ending June 30, 1912, which gave to them the right to solicit funds within the state of Kansas:

Wm. Small Memorial Home, Leavenworth.  
Children's Home Society, Topeka.  
Hutchinson Refuge Home, Hutchinson.  
Methodist Episcopal Home for the Aged, Topeka.  
Bethany Hospital, Kansas City.  
Christian Service League, Wichita.  
Kansas Home-finding Society, Lawrence.  
Kansas Association for Friendless Women, Leavenworth.  
St. Joseph's Hospital, Concordia.  
St. Vincent's Home, Leavenworth.  
Florence Crittenton Mission (colored), Topeka.

For the fiscal year ending June 30, 1913, the Board has issued certificates to the following institutions:

Wm. Small Memorial Home, Leavenworth.  
Bethany Hospital, Kansas City.  
Methodist Episcopal Home for the Aged, Topeka.  
Kansas Association for Friendless Women, Leavenworth.  
St. Vincent's Home, Leavenworth.  
Florence Crittenton Mission (colored), Topeka.  
St. Joseph's Hospital, Concordia.  
Hutchinson Refuge Home, Hutchinson.

In passing upon the rights of institutions to solicit funds within the state of Kansas, the Board decided that the following classes of institutions do not come within the provisions of this act:

1. Religious organizations, such as the Y. M. C. A., Salvation Army, American Salvation and others, organized for religious purposes.
2. Fraternal or benevolent organizations maintaining homes for their members or children, who confine their soliciting to their own membership, such as the Kansas Masonic Home and the Rebekah Odd Fellows Home.
3. Homes for old people or children or hospitals owned and controlled by religious organizations which get their source of income from bequests and from collections made from the members of such religious organizations.

The board of control has rules with which all other charitable institutions must comply in order to solicit funds in Kansas. The rules are fashioned after those adopted by the public welfare board of Kansas City which is working out a plan of its own to protect charitably inclined citizens from fraud. The general requirements which all charitable institutions in Kansas, outside of those mentioned above, must meet in order to have the sanction of the board are as follows:

The organization must fill a need which is not already filled by another organization.

The need must be great enough to warrant the equipment and support of a separate institution.

The institution must be efficient. Whether or not it accomplishes "some good" is not the proper test. The result secured must in some degree be commensurate with the amount of money and energy expended.

All charitable organizations must cooperate with other organizations to prevent duplication of effort and promote efficiency and economy in the administration of charities.

Some form of annual report must be made and turned in.

Proper and business-like accounts must be kept showing the income as well as all outlays, and these should be audited at regular intervals.

---

### FOREIGN CHILDREN'S CORPORATIONS.

Section 5090, General Statutes of 1909, the same being section 15, chapter 106 of the Session Laws of 1901, prohibits foreign corporations from placing children in family homes within the boundaries of the state of Kansas, unless they furnish the State Board with such guaranty as they may require that no child will be brought into the state having any contagious or incurable disease, or having any deformity, or being of feeble mind or vicious character, and that they will receive and remove from the state any child which shall become a public charge within a period of five years. The latter part of section 1, chapter 361, Laws of 1903 (section 5065, Gen. Stat. 1909), provides:

"No probate court shall permit the adoption of any minor child sent into this state by or through or under the auspices of any association, society or organization incorporated under the laws or having its headquarters in any other state until, in addition to all the other requirements of this section, all the provisions of section 15, chapter 106, Session Laws of 1901, shall have been fully complied with."

The State Board requires foreign children's associations to execute a bond to the state of Kansas in the sum of \$10,000, and three have furnished the bond, the New York Foundling Hospital, and the Children's Aid Society of New York, and the National Benevolent Association of the Christian Church, incorporated under the laws of Missouri. These are the only foreign children's associations that have the right to do a regular business of placing children in Kansas. Five others have placed one or two children each in the state and given bonds to protect the state for each individual child.

TWELFTH ANNUAL REPORT  
OF THE  
DIRECTOR OF THE  
KANSAS  
FREE EMPLOYMENT  
BUREAU,

FOR THE  
YEAR ENDING NOVEMBER 30,  
1912.

STATE PRINTING OFFICE,  
TOPEKA, 1912.

4 3845

LETTER OF TRANSMITTAL.

---

STATE OF KANSAS,  
OFFICE OF FREE EMPLOYMENT BUREAU,  
TOPEKA, December 3, 1912.

*To Hon. W. R. Stubbs, Governor:*

SIR—In compliance with the law creating this Bureau I have the honor to submit to you my report for the year ending November 30, 1912.

Respectfully,

CHAS. HARRIS, *Director.*

(3)

## *Twelfth Annual Report.*

---

Previous to this it has been the custom to issue the annual report of the State Free Employment Bureau with transactions terminating with the end of the calendar year. This year it has been decided to issue the report a month earlier, terminating the year on November 30, making the year only eleven months. This was done for various causes, chief of which was in order to be enabled to have the report printed and in the hands of the legislature when it meets. Heretofore it has been impossible to get the reports even printed until long after adjournment of the legislature, the printing plant having all it possibly could do in getting out the legislative printing matter.

### SUPPLYING HARVEST HANDS.

In no period since the establishment of the Free Employment Bureau of the state of Kansas has the state generally been in a more prosperous condition than during the past year. And in no previous period has the Bureau been more successful in accomplishing the task allotted to it when it was first organized. As is well known, the great and all important duty of the Bureau is to furnish hands to gather our immense crops—especially wheat. This latter duty, notwithstanding the fact that the wheat crop was one of the largest, if not the largest, ever gathered by the state, was successfully accomplished, harvest hands being obtained from every state in the Union, and even from the British provinces.

That this is no small or easy task is proven by the fact that no other state in the Union has a systematic method of ascertaining the number of hands needed for any emergency call, at what places and what time to be sent. This has been accomplished in Kansas for the past four years, when the great demand for hands to harvest our immense wheat crops has been supplied through the efforts of this Bureau, as many as 40,000 hands in one year being borrowed from all corners of the Union for the purpose.

Better to accomplish this end, immediately after harvest,

last summer, the Director sent a letter similiar to the following to the proper official in each of the great wheat growing states:

"DEAR SIR—I am writing to the different great wheat growing states, and asking the officials having charge of free employment to send me any literature they may have bearing on their methods of handling the harvest-hand question. I am asking them to let me know by what methods they ascertain the number of hands required during harvest in their state, and any other information bearing on the subject. My idea is to compare notes with one another and have each state assist the other. Oklahoma, for instance, starts her harvest, possibly a week or so earlier than Kansas. The men starting in that state often follow up the harvest into Kansas and through to Nebraska and the two Dakotas and Minnesota. An interchange of information as to dates of harvest and where hands may be most needed by the various states, it seems to me, would greatly assist in this work.

Hoping to hear from you in the near future, I am

Yours truly,

CHARLES HARRIS, *Director.*"

Replies were received from every state. But not a single one reported any method as being utilized to ascertain the needs of the farmer.

One state official frankly admitted that his state largely relied on harvest hands coming to the state after Kansas had gathered her crop.

Another state official asserted that he made no effort to gather the information because of lack of funds, he being allowed a fund of only \$10,000 to run the State Free Employment Bureau, with branches in three different cities.

Yet the Kansas Bureau, with a fund of only \$2,200 (including salary and contingent fund), does this work thoroughly and effectively every year.

In Kansas the harvest hands in every state in the Union and in Canada are instructed by mail just when, where and to whom to report to secure work in the harvest. No other state reported such a system.

In connection with this subject it is possible to suggest that the interests of the farmers especially, in the future, would be better conserved were the State Free Employment Bureau made a nonpolitical office, as the compiling of statistics necessary to the ascertaining of the number of harvest hands needed in the state, and the number necessary in each district of each county of the wheat belt is a complicated task, and requires experience in the work in order to obtain best results. Then in addition to ascertaining the number of hands

needed, and obtaining them, the task of distributing them where needed, avoiding a surplus here and a scarcity there, has heretofore been the cause of great anxiety and complaint, and no little criticism of the Bureau.

It is with no little pride that the Director reports that to his knowledge, during the past three years there has been not a single complaint filed in this office. Indeed, the contrary is the case, as may be witnessed by the following letter from Mayor Frizell, of Larned, who, previous to the present director's administration, was one of the Bureau's most severe critics:

*"Mr. Chas. Harris, Topeka, Kan:*

July 16, 1912.

DEAR SIR—Your favor of the 15th at hand and contents carefully noted.

We are directing all our extra help to Dodge, Offerle, and Cimarron. We have sent a great many extra men to Rozel, Burdett and Stafford.

I wish to thank you for the interest you have taken in securing men for us.

Yours respectfully.

E. E. FRIZELL, Mayor."

The above was in reply to a telegram to Mayor Frizell, asking him to send the surplus hands at Larned to the places above named, and is only one of many complimentary letters now on file in this office.

#### THE BUREAU AS AN IMMIGRATION AGENT.

Possibly no state has a better advertising medium than has Kansas in the Free Employment Bureau, which annually brings within her borders thousands of big, brawny and industrious men, to assist in harvesting her wonderful wheat crops. A large majority of this great army of harvesters are of the material of which the very best samples of American citizenship are composed. As a class they are honest, hard working, intelligent, and well educated. They come from all walks of life. They embrace the farmer, the mechanic, the common laborer, the clerk, the lawyer, the doctor, and last, but by no means least, the college student. The latter, so the Kansas farmers say, is the model harvest hand.

These men see Kansas at her best, fall in love with her, and either remain with her, or, after returning east and sounding the praises of the Sunflower state, later return and make a home within her borders.

But the fame of the Bureau is not confined to the United States, nor even to the American continent. During the past

year not only the newspapers and magazines of this country have published the "Call for Harvest Hands," issued by the Kansas Bureau, but newspapers in faraway Australia have commented on "Kansas Wheat Harvests," and *The Colonizer*, one of the largest and most influential magazines published in London, England, published in full the "Harvest Call," and made flattering and favorable comment on same.

#### NEW EMPLOYMENT AGENCY LAW.

The legislature of 1911 passed a law regulating private employment agencies and placing them under control of the Free Employment Bureau, the director of which is empowered to issue them licenses on payment by them of a nominal fee and the filing of a bond that they will not violate the provisions of the law. Up to date this law has had a splendid effect, and has driven a number of so-called employment agents out of business. The law is a protection to the poor laborer seeking employment, and is having a very beneficial effect, but few complaints being filed at this office since its enactment, and those few readily adjusted by the director without resorting to the courts.

#### PRIVATE EMPLOYMENT AGENCY LICENSES.

The following is a statement of cash received for licenses issued to private employment agencies, all of which has been turned into the state treasury, and receipt taken for the same:

##### 1911.

Dec. 25.—Doug. Shaw, Arkansas City.....	\$1.67
Dec. 29.—Renyer & Zeigler, Topeka.....	25.00
Dec. 30.—C. R. Meese, Topeka.....	25.00

##### 1912.

Jan. 2.—J. Kuykendall, Topeka (paid part last year).....	13.60
Jan. 9.—J. R. Kenworthy, Wichita.....	25.00
Jan. 10.—L. A. Brotton, Wichita.....	25.00
Jan. 19.—Frank J. Manning, Pittsburg.....	10.00
Jan. 31.—Cecil Johnson, Hutchinson.....	10.00
Apr. 13.—Bert Shelley, Hutchinson.....	7.50
Apr. 20.—J. W. Hartwick, Anthony.....	7.50
Jun. 7.—Bradshaw Land Co., Wichita.....	14.60
Aug. 7.—L. D. Sparks, Wichita.....	10.40
Sept. 12.—C. J. Cavanaugh, Hutchinson.....	5.00

Total ..... \$180.27

For further information and details of the work of the Bureau for the year, your attention is respectfully directed to the tabulated statements.

CHARLES HARRIS, *Director*.

**REPORT**

**OF THE**

**Kansas State**

**Entomological Commission,**

**FOR**

**1911 AND 1912.**

---

**STATE PRINTING OFFICE,  
TOPEKA, 1913.**

## *Letter of Transmittal.*

*To Hon. W. R. Stubbs, Governor:*

We have the honor of presenting herewith the third report of the Kansas State Entomological Commission.

Very respectfully,

F. D. COBURN, *Chairman.*

WALTER WELLHOUSE, *Secretary.*

TOPEKA, KAN., January 1, 1913.

(3)

## *Introductory.*

---

*To the Legislature of Kansas:*

We have the honor of submitting herewith the third report of the Kansas State Entomological Commission, covering the years 1911 and 1912, as made by the state entomologists in charge of the Commission's field work. While the law creating and defining the duties of the Commission embraces a wide field of useful work in combating insects and diseases inimical to agriculture and horticulture, the appropriations so far have been only sufficient to deal principally with the San José scale. The prevalence of this pest has been materially lessened in some of the districts most infested and entirely eradicated in others, but perhaps the most valuable work of our entomologists has been the education of growers in methods of successfully contending with insects detrimental to the state's farm and orchard interests.

Respectfully submitted.

F. D. COBURN, *Chairman.*

WALTER WELLHOUSE, *Secretary.*

TOPEKA, KAN., January 1, 1913.

## *Report of S. J. Hunter,*

State Entomologist, Lawrence.

---

*Hon. F. D. Coburn,*

*Chairman Entomological Commission, Topeka:*

DEAR SIR—In accordance with legislative act of the state of Kansas in the session of 1907 I have the honor to transmit herewith the third biennial report of the state entomologist in charge of the south half of the state as assigned by the Commission.

The report is treated under the following heads:

1. Nursery inspection.
2. Federal inspection.
3. Guarding against infestation of brown-tail moth.
4. Orchard culture and management.
5. San José scale.
6. Apiary inspection.

In transmitting this report I wish to express appreciation of the hearty coöperation of the chairman and secretary in furthering the interests of the work.

Mr. A. J. Spangler, my chief assistant, merits an expression of commendation for the careful and efficient manner in which he has handled the problems in the field.

### WORK OF 1910-1911.

#### 1. NURSERY INSPECTION.

This year the policy was established of making a detailed survey of a radius of some ten miles around each one of the nursery centers of the state.

These surveys consist of a careful examination of all trees, plants and shrubs likely to harbor injurious insects or plant diseases. A permanent record is kept of each survey by means of blue-print maps of the territory surveyed, showing the names of owners, locations and conditions. These maps are accompanied by a full report, numbered to correspond with the location numbers on the map. This, therefore, becomes a ready working guide from year to year, and can be

used by any one, so that a change of appointees causes no serious delay or loss of information.

We are, furthermore, enabled to speak authoritatively regarding the conditions as they exist in the territory surrounding nurseries.

All nurseries have been inspected, and certificates issued to those whose stock was free from San José scale. Nurseries situated in proximity to a dangerous outbreak of San José scale have not been certificated. One nursery in which but a very few scale were found on one tree was not certificated, and all of its stock was fumigated by an assistant from this department under the rigid requirements of the hydrocyanic-gas process.

## 2. FEDERAL INSPECTION.

During this year, as in previous years, there was no protection afforded against the possible introduction of injurious insects and plant diseases by foreign importations. With the coöperation of the nurserymen and growers, however, the writer assumed responsibility for the examination of all importations coming from foreign centers.

## 3. GUARDING AGAINST INFESTATION OF BROWN-TAIL MOTH.

During the previous biennium some thirty nests of this highly injurious insect were taken and destroyed in foreign importations. The destructive possibilities and the rapidity with which this insect spreads, together with the menace it has been shown to be to the public health, had emphasized the necessity of using utmost precaution against its gaining a foothold in the state. No additional nests were found this year.

## 4. ORCHARD CULTURE AND MANAGEMENT.

The work on the San José scale has come to be a means toward an end. That is, wherever spraying has been done the beneficial results to the fruit crops have been so noticeable that many have come to see that spraying itself is a profitable means of culture. There has, therefore, become a widespread demand for consultation and direction upon problems connected with orchard culture and management.

This is as it should be, for if we are to maintain control over the San José scale and similar injurious insects, it can only be done by the united efforts of all interests concerned.

Accordingly, during this year, in connection with our San José scale work, we coöperated with the orchardists in twelve counties. The growing interest in those vicinities is an evidence of the appreciation of this work.

#### 5. SAN JOSÉ SCALE.

This insect is without doubt an insect of great economic importance in this state. Our method of combating this insect is organized into a regular systematic campaign.

No efficient treatment can be applied during the summer months. This time, therefore, is occupied in making careful inspection of all probably infested areas, meeting the owners of infested properties, and giving them adequate instructions regarding the nature of the insect and the certain losses which are sure to accrue unless prompt remedial measures are taken. In accordance with law, notices are served where treatment is required.

As soon as the dormant buds appear in the fall we return to coöperate with the fruit growers in carrying out the prescribed measures.

We have enjoyed the hearty coöperation of the growers and an increasing interest as fast as the work comes to be understood. The only exception that can be cited is that of one S. W. Balsch, of Sedgwick county, who undertook to thwart the intent of the law by continuing to harbor the San José scale on his premises. He undertook to maintain his position in court, but the law under which we are acting was sustained both in the district court, and in the supreme court, all justices concurring.

The examination work that has been done for the year is best shown by the accompanying tabulated results.

#### INSPECTIONS FOR YEAR ENDING DECEMBER 1, 1911.

**6. APLARY INSPECTION.**

The bee keepers of the state, largely on their own responsibility, undertook to secure protection for their interests, and they asked the Commission, if they would place with us an appropriation of \$500, if we would organize and begin the work of inspection of the apiaries of the state for foul brood. Of this amount \$250 was available for the work of the state entomologist during the last year. It was not possible with so small an amount to use an inspector-at-large, so selections were made in a few of the most prominent apiary districts of a well-informed bee keeper. This plan worked to the satisfaction of the bee keepers and this office.

**WORK OF 1911-1912.****1. NURSERY INSPECTION.**

The same policy has been pursued this year, with the addition that nurserymen are strongly urged to secure locations for planting and business remote from any injurious insects or plant diseases. This is a policy which is not only advantageous to the state at large, but to the nurserymen as well, since the requirements of some of the other states are such as to make it greatly to the advantage of the nurserymen to have the stock grown in a locality free from injurious insects and plant diseases.

**2. FEDERAL INSPECTION.**

The writer was asked by the Western Nurserymen's Association and by the committee on federal legislation west of the Mississippi to join them in securing federal legislation which would adequately and fairly protect the horticultural interests of the United States against importation of injurious insects and plant diseases.

The legislative committee of these two associations was composed of Hon. W. P. Stark and the writer. The plan pro-

posed by the Western Association and adopted by the legislative committee of the National Association of Nurserymen for the territory west of the Mississippi was, briefly, as follows: That the execution of the law with reference to interstate transportation and federal importation should be vested in a federal board, and that the responsibility for the inspection and care of importations, after they enter the state or come into state commerce, should rest with the proper state officials.

These measures were incorporated in a law, and this law became effective on August 20, 1912.

In carrying out the instructions given us this committee was required to appear twice in Washington; first, at a conference of all concerned, and second, at request of members of Congress for consultation.

Under the provisions of this act we are receiving regular notices from this federal board and from the importers regarding all importations, both to private parties, department stores, florists and nurserymen, and these importations are inspected promptly upon arrival at destination.

### 3. GUARDING AGAINST INFESTATION OF BROWN-TAIL MOTH.

The economic importance of this insect has probably never been better illustrated than in a recently published article (see *Literary Digest*, November 30) in which it was stated that during the present season more than 120 bushels of brown-tail moths had been taken from the electric lights of one eastern town (estimated at one and one-half billion individuals). These insects, both in the immature and mature stages, shed spines which have been shown to be a serious menace to public health, causing a grievous rash on the skin, and in some cases entering the lungs with fatal results.

With the protection now afforded through legislation, it is highly essential that means may be available for the administration of these legislative protective measures.

### 4. ORCHARD CULTURE AND MANAGEMENT.

The work this season has had a degree of success which in some instances it would seem difficult to excel. In some orchards less than one per cent of certain varieties of apples were imperfect, while check trees in the same orchard showed from twenty-five to fifty per cent imperfect.

## 5. SAN JOSÉ SCALE.

During this year I regret to announce that we have found two new infestations, one in Wilson county and one in Crawford county. We have found infested apples being shipped into Cowley county, but as yet no infestation has been found there.

The examination work that has been done for the year is best shown in the accompanying tabulated results.

## INSPECTION FOR YEAR ENDING DECEMBER 1, 1912.

*Sedgewick County:*

**6. APIARY INSPECTION.**

The amount of money available for this work this year of 1912 is being used in the same way as last year. It is obvious that for the small amount of \$250 no widespread results are to be expected.

**GENERAL SUMMARY FOR THE BIENNIUM.**

1. All nurseries and nursery plantations in the southern half of the state have been carefully inspected each of the two years.

2. In the survey for San José scale 664,217 trees have been examined, 62,627 have been found infested, 1954 have been destroyed, and 162,586 have been sprayed. In doing this work 307 $\frac{1}{4}$  square miles of territory have been surveyed.

3. Importations destined for the south half of the state have been examined for dangerous insects and plant diseases, and all such found have been removed.

4. As one of a committee of two, representing the horticultural interests west of the Mississippi river, the writer participated in the formulation and passing of a federal legislative bill affording fair and adequate protection to both the agricultural and horticultural interests of the state against the possible introduction of inimical insects or plant diseases.

5. The San José scale exists in Wyandotte, Crawford, Labette, Wilson, Sedgwick, Pawnee and Ford counties. It has

been found in, and is believed to be eradicated from, Douglas, Shawnee, Reno, Rice and Pratt counties.

6. Inspection of apiaries, a new phase of the work, was begun on a small scale at the beginning of this biennium.

7. Possibly one of the greatest results of the work of the Commission is the widespread interest in the possibilities of Kansas soil in the profitable production of choice fruit of high flavor. It has been conclusively demonstrated that Kansas fruits will market at higher prices and to better-satisfied customers than apples grown on land widely advertised in far-off fields. These results are being brought about in Kansas through intelligent spraying and culture, and pertinent information to this end is being freely given.

S. J. HUNTER,

In Charge of Southern Half of State.

*Report of Geo. A. Dean,\**

State Entomologist, Manhattan.

*Hon. F. D. Coburn,**Chairman Entomological Commission, Topeka:*

DEAR SIR—I beg to submit to you the following report for the years 1911 and 1912:

The work of the year ending December 1, 1911, and up to the first of August of the year ending December 1, 1912, was under the direction of Prof. T. J. Headlee, state entomologist of the northern half of Kansas. The field work for the year of 1911 was under the immediate charge of Mr. L. M. Peairs, assistant entomologist of the Kansas Agricultural College and Experiment Station, who, under the direction of the state entomologist, devoted his entire time to the prosecution of the work. On the first of February, 1912, Mr. L. M. Peairs resigned his position at the Kansas State Agricultural College to take up his work as head of the department of entomology in the West Virginia Agricultural College and Experiment Station. Mr. Joseph H. Merrill, a graduate of the Massachusetts Agricultural College, was appointed to fill the place made vacant by the resignation of Mr. Peairs. Mr. W. E. Watkins, a graduate of the Kansas State Agricultural College and of the University of Colorado, was employed December 7, 1911, as a regular assistant to the state entomologist. Almost the entire time of Messrs. Merrill and Watkins has been devoted, under the direction of the entomologist, to the field work against the San José scale.

The work of the two years followed each of the four lines: (1) the regular inspection and certification of all nurseries growing stock in the northern half of Kansas; (2) the careful examination of all nursery stock shipped into Kansas from abroad; (3) location and suppression of the San José scale; (4) the inspection (in 1912) of apiaries, bees and hives for the detection and suppression of contagious and infectious diseases of bees.

Acknowledgments are due to the chairman and secretary of

---

\* State entomologist since October 1, 1912.

the Commission, whose prompt and efficient coöperation has greatly aided in the work, and to the fruit growers, whose interest has made the successful prosecution of the work possible. Acknowledgments are also due to Messrs. J. H. Merrill and W. E. Watkins, who have taken hold and efficiently prosecuted the work.

#### NURSERY INSPECTION.

All nurseries were subjected to a thorough annual inspection, and the entomologist is glad to report that they have been found without exception entirely free from San José scale and other seriously injurious insects and plant diseases.

#### INSPECTION OF IMPORTED NURSERY STOCK.

The United States Bureau of Entomology and the Federal Horticultural Board have furnished the entomologist notice of all shipments into Kansas of foreign nursery stock, and all stock consigned to northern Kansas was given a thorough inspection before it was offered for sale or distribution.

The entomologist feels that with the protection of the federal plant quarantine act, August 20, 1912, the introduction of the brown-tail moth, gipsy moth, and other seriously injurious insects will be reduced to a minimum, and with the careful discharge of the duties pertaining to the office of state entomologist, together with the proper coöperation of our growers and dealers of nursery stock, these pests should find it very difficult to gain a foothold in this state.

#### SAN JOSÉ SCALE.

During that part of the winter and early spring of both years which would permit of work, much of the time was given to personal work among the fruit growers, assisting them in getting spraying apparatus in working order and showing them how to spray. At the same time the public sprayers were kept in operation, and, in so far as possible, a general "follow up" plan was pursued. During the summer of 1911 the entire infested districts were given a general inspection to find the effect of the spraying that had been done by representatives of the Commission, to determine the spread of the scale, to find what infested plantings had been treated or removed, as per directions to the owners, or in a general way to determine the present status of the scale. The result

of these inspections shows that there was no spread of the infestation.

During the summer and fall of 1912 a property to property inspection was made of all the infested districts, with the exception of that part of the Kansas City district lying within the city limits. This inspection covered not only the territory known to be infested, but extended in all directions from the infested district, in order to ascertain for a certainty that there was no scale beyond the limits of the infestation. The condition of all orchards and plantations, whether infested or not, was recorded and all information regarding them placed on file in the office of the state entomologist. During the winter and spring of 1913 it is planned to keep the public sprayers in operation for the purpose of spraying all plantations where the owners do not care to go to the trouble of treating.

While the entomologist is pleased to report that the scale has not spread beyond the limits of the previously infested districts, and has been greatly reduced within the infested areas, he regrets to report the finding of two entirely new infested localities, one in the city of Marquette and a small portion of the surrounding country, and the other in the city of Lindsborg, both of which are situated in the northern part of McPherson county. In both of these districts, almost without exception, the citizens whose properties were found infested showed the very best spirit of coöperation and were very anxious, indeed, to learn about the scale and the best means of controlling it.

#### GENERAL SUMMARY OF INSPECTION WORK IN EACH LOCALITY.

	Doniphan county.....	Jackson county.....	Jewell county.....	McPherson county.		Wyandotte county- country.....	Total.....
				Mar- quette.	Linds- borg.		
Square miles inspected.....	30	39	15	12	19	51	166

**RESULTS.**

The principal results of the last two years' work have been educational, and can best be summarized by quoting from Doctor Headlee's report to the Commission for the years 1909 and 1910. "All, or practically all, of the owners or tenants of the infested plantations, as well as many of their friends and acquaintances, have had an opportunity to see the treatment for scale applied and to observe the results. The necessity of outfitting themselves for destroying the scale and the resultant familiarity with the use of spraying machines and materials have naturally led the fruit growers to summer-treat their fruit trees for other injurious insects and for plant diseases in the hope of improving the quantity and the quality of the yield."

The Doniphan, Jackson, Jewell and Wyandotte counties infested districts have not spread, but on the other hand have experienced a marked reduction in the abundance of the scale.

**THE OUTLOOK.**

Inasmuch as the San José scale has never been eradicated from any country where it has obtained such a foothold as it has in Kansas, we might as well accept the proposition that to eradicate the scale is impracticable, but to control it is perfectly practicable. General results of the treatment with lime-sulphur sprays, even with a single spraying per year during the dormant season, will easily and efficiently control the scale. The inspection of the infested areas shows that its rapid progress can be stayed, its damage reduced from absolute destruction of thousands of fruit trees to where it becomes merely a spur to compel orchardists to practice those measures that are needed for the production of high-grade fruit. Doctor Headlee in one of his reports says: "Indeed, so thoroughly are many of the fruit growers in the infested districts convinced that this is true, that they have ceased to fear the scale, and some of them have expressed themselves as well pleased that at last something has arrived which will put the shiftless fruit grower out of commission." He further says: "The campaign against San José scale becomes one of education. Spread abroad among the people an accurate knowledge of how this creature looks, how it works, what harm it does,

and how it may be completely controlled, and the power of San José scale seriously to injure Kansas fruit production becomes a thing of the past."

#### INSPECTION OF APIARIES.

While the legislature passed a much-needed law which provides for the control and eradication of bee diseases, unfortunately the money appropriated for the purpose was entirely insufficient to make the careful inspection of apiaries that should be made.

In view of the limited funds, the entomologist in the spring of 1912 first sent a letter to the county clerks of all the counties in the north half of the state, requesting them to furnish him with the names and addresses of all persons keeping bees in their county. To this request the county clerks of twenty-four counties reported a total of 4177 individual owners of bees, with a total of 18,944 colonies. Upon receipt of this information from the county clerks there was sent to each bee keeper who had ten or more stands a letter asking him to suggest a reliable man within the limits of his neighborhood, county, or adjacent county who had the proper knowledge of bee diseases and the time necessary to do the work of apiary inspection. To this request 41 persons were recommended, representing 29 localities in 14 counties.

On February 17, 1912, there was received from E. F. Phillips, in charge of bee culture, Bureau of Entomology, Washington, D. C., the following information relative to samples of diseased brood received from the northern half of Kansas:

County.	Town.	Name.	Disease.
Osborne .....	Osborne .....	J. R. Bush.....	American foul brood.
Jewell .....	Jewell .....	O. S. Mullin.....	do.
Osborne .....	Downs .....	F. I. Lewis.....	do.
Osborne .....	Downs .....	R. Maxwell .....	do.
Shawnee .....	North Topeka	A. V. Small.....	do.
Leavenworth ..	Leavenworth.	W. G. Shortley....	do.
Washington ..	Clifton .....	J. B. Avery.....	do.

During the summer of 1912, Mr. Warren Knaus, McPherson, Mr. H. F. Hillebrandt, Osborne, and Mr. C. M. Randall, Topeka, were employed as local inspectors, and, so far as the

limited appropriations would permit, made inspections as per the following summary:

COUNTIES.	Apiaries inspected.	Colonies.	Apiaries diseased.	Colonies diseased.	Colonies for which treatment was recommended.	Colonies treated.
Osborne .....	38	258	11	20	20	1
McPherson .....	123	428	1	1	1	1
Saline .....	3	24	0	0	0	0
Shawnee (north of river) .....	1	2	0	0	0	0
Washington .....	4	18	1	1	.....	.....
<b>Totals .....</b>	<b>169</b>	<b>780</b>	<b>13</b>	<b>22</b>	<b>21</b>	<b>2</b>

During the coming spring and summer the balance of the money appropriated for the bee inspection work will be used for the inspection of apiaries in those districts from which foul brood has been reported.

#### SUMMARY.

1. During the years of 1911 and 1912 all the nurseries in the northern part of Kansas have been carefully inspected, and, inasmuch as no San José scale or other seriously injurious insects and plant diseases have been found, have been duly certificated.

2. All shipments of nursery stock coming into northern Kansas from abroad, in so far as known to the entomologist, have been carefully scrutinized.

3. San José scale has been found in Doniphan, Jackson, Jewell, McPherson and Wyandotte counties. The two infested districts of McPherson county are entirely new infestations.

4. With the exception of that part of the infestation lying within the city limits in the Kansas City district, all the infested plantings in these counties have been inspected and recorded.

5. The inspection has involved the examination of 2097 plantations, scattered over 194 square miles, 673 of which, scattered over 46.5 square miles, have been found infested.

6. This inspection has involved the examination of 266,796 individual plus 640½ acres of fruit plants plus 659 rods of Osage orange hedge, of which 28,464 individuals plus 0 acres of fruit plants plus 25 rods of Osage orange hedge are infested.

7. The property to property inspections of all the old infested districts show that the scale has not spread beyond the limits of the previously infested districts, and has been greatly reduced in numbers in the infested areas.

8. The county clerks of twenty-four counties in the northern part of Kansas report 4177 individual owners of bees with a total of 18,994 colonies.

9. Local inspectors have inspected 169 apiaries, with a total of 13 apiaries diseased.

10. Foul brood has been found or reported from Jewell, Leavenworth, McPherson, Osborne, Saline, Shawnee, Wabunsee and Washington counties.

11. Preparations are now being made for the coming winter treatment.

*To His Excellency, Hon. W. R. Stubbs, Governor of Kansas:*

DEAR SIR—We herewith, at your request and as required by law, submit our first biennial report as fish and game warden of the state of Kansas. While this report, in a way, covers all the period since we received our commission, December 1, 1909, it more especially covers the period since the enactment of the new fish and game law, passed by the legislature of 1910 and 1911. This law was published and became effective March 25, 1911.

In making this report and in the discussion of fish and game matters of interest to Kansas people, we have tried to be fair to all parties concerned. It is our desire that the Department of Fish and Game be so managed that the greatest good may come to the greatest number of Kansas people.

Respectfully submitted.

L. L. DYCHE,  
*State Fish and Game Warden.*

# The Warden's Biennial Report.

## INTRODUCTORY.

### APPOINTMENT OF WARDEN.

At a meeting of the Regents of the University of Kansas held November 9, 1909, the following resolution was passed and transmitted to the governor on November 30, in the form as presented below:

THE UNIVERSITY OF KANSAS,  
LAWRENCE, November 30, 1909.

*Hon. W. R. Stubbs, Governor of Kansas:*

MY DEAR SIR—At a meeting of the Board of Regents last night the following resolution was adopted:

“On account of the lack of appropriations for the fish and game warden-ship, and of its great importance to the state, and further, because of the desire and duty of the University to do everything in its power for the commonwealth whose name it bears, the Regents of the University of Kansas hereby offer the services of Prof. Lewis Lindsay Dyche as fish and game warden for so much of his time as may be necessary to place the fish hatchery and the entire work connected with the position on a thoroughly scientific and economic basis, believing that it may be made of great economic importance to Kansas.

Very respectfully yours,

FRANK STRONG, *Chancellor.*”

The governor immediately accepted the proposition of the University Regents, and we received our commission as fish and game warden December 1, 1909.

Col. Thomas Benton Murdock, our immediate predecessor, held the office from July 1, 1909, until November 4 of the same year, the date of his death.

The last legislature that convened before Colonel Murdock's appointment failed to make any appropriation for the upkeep and maintenance of the Fish and Game Department. This embarrassed Colonel Murdock very much, as he had no funds at his disposal for carrying on and developing the work in accordance with his ideas and plans.

### NO FUNDS FOR FISH AND GAME.

There were no funds for the upkeep and development of the department until the legislature of 1911 made appropriations, which became available March 25, 1911. During this time the absolutely necessary expenses of maintaining the department were paid by the governor out of his contingent fund. The sum thus expended amounted to \$7,258.40. The legislature of 1911 transferred this amount from the fish and game warden fund to the general state treasury fund. It also appropriated and made available for carrying on the work of the Fish and Game Department funds that had been collected from the sale of hunters' licenses.

**WARDEN STUDIES SITUATION.**

As soon as we received our appointment as fish and game warden we gave the subject of fish and game our immediate attention. We began a careful and systematic study of the state, and collected all information available concerning fish and game and their needs and possibilities in the state of Kansas.

We want to say right here, before going any further, that this was an appointment that we never sought or asked for, and one that we should never have taken except for the fact that the governor and the Regents of the University made it a part of our University work. When we finally accepted the appointment we did it with much hesitation and some trepidation, for we realized that we were about to take up a work of great importance and one that would be no easy task to manage for the greatest good of the greatest number of Kansas people.

We have always been interested in fish and game, and the major part of our work at the University for more than thirty years has been with mammals, birds and fishes. We studied them both in the field and in the laboratory and made extensive collections for the natural history museum.

**CONDITIONS AT THE FISH HATCHERY.**

At the fish hatchery we found problems and conditions that demanded our immediate attention; but no library, no set of books, no system of bookkeeping; not even a set of reports of the fish and game wardens of other states; no laboratory and no place to work and carry on investigations. We improvised a temporary laboratory in an old buggy shed. It was the crudest and most unfinished structure for a scientific laboratory that one ever saw. We took a few hundred books and pamphlets from our private library, and a few instruments, including microscopes, from the University, and began work. We soon found out many things that it was very important to know in connection with the management of the fish hatchery. Studies that were made under these adverse conditions laid the foundation for bulletins that are being published.

In a short time our correspondence was greatly increased. So many questions were asked, especially about fish—such as how to get them, how to raise them, and how to care for them—that it was not possible to give intelligent answers to any considerable part of them. We immediately conceived the idea of issuing bulletins for the purpose of imparting information on the subjects that the mass of our correspondents were most interested in.

**BULLETINS PUBLISHED AND TO BE PUBLISHED.**

We have outlined about a dozen bulletins on subjects that we think will be valuable for Kansas people, and have had the honor to transmit to you for your consideration parts I and II of Bulletin No. 1, on the subject of "Ponds, Pond Fish and Pond Fish Culture." Parts I and II have been published and are being distributed to interested parties throughout the state. Part III is being prepared.

**GREAT DEMAND FOR FISH.**

The interest in the fish business grew so rapidly and the applications became so numerous that the department soon became greatly embarrassed, as it was not possible to raise fish enough, with the small hatchery plant at its command, to properly supply the ponds already in existence, to say nothing of the many new ponds that were being and would be built. There were also many applications for fish for Kansas streams. If we promised fish to all applicants it would mean that only a few fish could be delivered to each applicant, and these few at very irregular intervals.

**A NEW HATCHERY WITH GREATER POSSIBILITIES AND FACILITIES.**

It soon became apparent to us that a much larger hatchery, with better facilities for raising and handling fish, was necessary if the hatchery was to meet the demands that were being made upon it.

After a careful survey of the situation, we conceived the idea of building a "new and improved fish hatchery" that would be adequate to meet the increasing demands of the fish interests of the state.

**SKETCHES AND PLANS FOR NEW HATCHERY.**

As soon as a study of the situation and the conditions to be met could be made, sketches and plans were prepared for a new and improved fish hatchery. These sketches and plans were prepared with the aid of Prof. W. C. Hoad, civil engineer at the University of Kansas. They were presented to the Kansas legislature for its consideration during its session of 1911.

**PLANS FAVORED BY LEGISLATURE AND FUNDS APPROPRIATED.**

The plans and the explanations that showed the possibilities of the new hatchery were considered favorably by the members of the legislature. Funds were appropriated that made it possible to build a new and improved fish hatchery. More detailed plans, based upon more accurate surveys, were immediately prepared, and sufficient land, eighty acres in one tract, adjoining the old hatchery on the west (and some other small pieces, aggregating about fifteen acres), was purchased by the state. Also a right of way one and one-third miles in length for a twenty-one inch water pipe line was secured.

**NEW AND IMPROVED FISH HATCHERY TO BE FINISHED IN OCTOBER.**

The building of this hatchery is now under headway, with a time limit of October 15, 1912, for its completion. When finished there will be eighty-three new breeding, nursery and stock ponds, averaging in surface area about one acre each. These will furnish about twelve miles of shore line, affording good breeding and spawning places for the old fish and fine feeding grounds for the young fish.

**THE LARGEST FISH HATCHERY IN THE COUNTRY.**

The above hatchery will be, so far as we are able to learn, when completed, the largest pond fish hatchery in the country. An effort is being made to make it the most complete and the best equipped hatchery of the kind that was ever built. However, its entire output will scarcely meet the future demands of a state that has over 80,000 square miles of terri-

tory, with its many good fish streams and its number of good fish ponds constantly increasing. It will make it possible, however, for some years to come, for the department to place good supplies of brood-stock fish in both the ponds and the streams of the state and to visit all the principal localities, where fish are desired, with the fish car at least once a year.

#### STOCK PONDS FOR HOLDING FISH UNTIL TWO YEARS OLD.

There will be nursery and stock ponds and water enough in the new hatchery to enable the department to hold many fish until they are two years old and of spawning size before distributing them. Thus the department can stock ponds with fish that are old enough to spawn and save much time for the person who desires to raise fish. We also think it desirable and profitable to place two-year-old fish in streams. Two-year-old fish of spawning size are less liable to be destroyed when placed in strange waters, for they do not have to spend one or two years dodging their enemies, especially the larger and older fish, before they can spawn and produce thousands of young fish.

---

### KANSAS AS GAME STATE.

In former years, when the state of Kansas was new, it might have been considered a game state. The prairie lands were covered with herds of buffalos and antelope, and the wooded valleys and hills furnished shelter for many deer and elk. Wild turkeys were quite common in the wooded districts, and prairie chickens were found in great numbers, especially in the eastern part. At present conditions are changed. Large game animals have completely disappeared. Wild turkeys have likewise become extinct, and prairie chickens are confined to a few counties in the western part of the state and are threatened with extinction. About the only game animal that has held its own is the rabbit, and about the only game bird is the quail. Ducks and geese in former years were very common during the period of migration. Of late years, comparatively, but a very few pass through the country. Kansas can not any longer be counted as a game state.

#### KANSAS AN AGRICULTURAL STATE.

Practically all the land in Kansas is used for agriculture, horticulture and stock-raising purposes. There are no longer any wild or naturally protected places for large game.

#### THE PRAIRIE CHICKEN AND THE QUAIL.

While the rabbit seems to thrive under all kinds of conditions, it is quite different with the quail and the prairie chicken. Prairie chickens prefer to nest on the open prairies and in the wild-grass meadows. There are very few, if any, wild-grass meadows now that are not used either for hay meadows or for stock pastures. Cattle, horses and sheep tramping over the ground necessarily interfere very much with the nesting habits of the prairie chickens.

The quail has many of the same conditions to contend with. These birds, as a rule, do not nest in thickets, hedgerows or in wooded districts.

They seek the grassy meadows, and in late years they especially seek the alfalfa fields. Quail that build their nests in alfalfa fields are usually sitting on their first clutch of eggs during the season that the first cutting of hay is made. The cutting of the alfalfa and the raking of the hay invariably destroys the nests, and in some instances the old birds themselves are crippled or killed. On a five-acre alfalfa field at the fish hatchery three quail nests were destroyed during the period of one (the first) hay cutting. All the nests were unknowingly destroyed, as they were not found until after the hay had been raked. Two or more nests were found in the same hayfield when the alfalfa was cut the second time. Many, many instances have been reported to the department of the destruction of quail nests during the cutting of alfalfa and other tame-hay crops.

The above account gives an idea of one of the serious drawbacks in the propagation of quail. Their nesting habits are such that great numbers of eggs are destroyed before the young birds are hatched. In many of the wild meadows where these birds nest, cattle or other domestic animals are constantly feeding, and the birds have little chance to nest and hatch their young without being disturbed.

Still another drawback to the quail is the severe winters that we sometimes have in Kansas. During the past winter in certain localities the quail were almost exterminated. Whole coveys were reported frozen to death. One of the most discouraging features was the fact that some of the frozen birds were reported found dead with their crops full of grain. This went to show that they were frozen, regardless of the fact that they had food. Rainy weather that wet their feathers preceding snowstorms left the birds in poor condition to endure the extremely cold weather. However, such extreme weather conditions are rare in Kansas.

---

## FISH AND GAME.

In chapter 198 of the Session Laws of 1911 the Kansas legislature passed what might be considered a new fish and game law for the state of Kansas. Many old sections were omitted, others were revised, and many new sections with new provisions were added. So far as we have been able to learn, this fish and game law has been generally satisfactory to the mass of Kansas people. However, no state has succeeded in making a fish and game law that is satisfactory to all its people. Topographical conditions and conditions of environment in different parts of the state make it difficult to frame a law that will apply with equal fairness to all its people.

Many laws relating to fish and game have been ill advised, due in part to the fact that they favor special localities and special interests, and due largely to their disregard of biological conditions. Any code of laws that can be agreed upon by the lawmakers of a state as large as Kansas must of necessity be in the nature of a compromise; they are experimental, and must at times be revised and readjusted to meet the requirements of changing conditions.

## PURPOSE OF LAW.

It is the intent and purpose of the law to protect certain kinds of wild life, because this wild life is valuable to mankind. The wanton waste and destruction that follows in the footsteps of the overzealous sportsman, the pothunter, the market hunter and the "game hog" has made deep and unnecessary inroads into the wild-life centers of our state. It is the purpose of the fish and game laws, and the duty of those who enforce them, to restrain the thoughtless and avaricious person who destroys valuable wild life without regard for its present value or future condition. Without such restraint many valuable animals, birds and fishes would soon become rare, and even extinct.

## FISHING AND HUNTING FOR PLEASURE.

Persons of means can go to various parts of the country and to reputed pleasure resorts for their outings, but people in more moderate circumstances and the poor man must seek the joys of fishing and the pleasures of field sports either at home or some near-by place. It seems to us that the interests and pleasures of the latter, who are vastly in the majority in our state, should ever be kept in mind when the fish and game laws are being enacted. Laws should not be made for the well-to-do sportsmen alone. We had this idea in mind when we made plans for the largest and best equipped pond fish hatchery in the country. We hope to be able, by stocking and restocking Kansas waters, to produce a good supply of fish in all the streams and ponds in the state; in other words, to produce fish enough in Kansas waters so that fish will become a common article of food for Kansas people, and the pleasure of fishing may be enjoyed by thousands at or near their homes.

---

GAME LAWS.

Game laws are intended primarily to regulate the killing of game as regards time, amount and manner of killing. The civilized development and settlement of any country destroys to a very considerable extent the natural haunts of wild game. The destruction of breeding and feeding grounds causes a natural diminution of the supply. Therefore it has been necessary for the legislatures of the various states to enact many prohibitive and restrictive measures for the protection of game and fish.

At the last session of the Kansas legislature many measures were considered and some were enacted into law. It was hardly possible to find a half dozen people from as many different localities in the state who could agree on what a game law should be for any species of game. The committees on fish and game of both the house and the senate of the last legislature considered the matter of making a fish and game law in committee meetings a number of times. All petitions and letters that had been submitted to the department for consideration were presented to these committees.

**CHANGES IN THE LAW.**

The legislative committees gave special consideration to petitions asking for changes in the law. A reduction in the bag limit was asked for, and it was granted. It was also asked that the use of live decoys be discontinued, as it gave the pothunter and the market hunter, who hunted every day during the open season, too great an opportunity to destroy game. This request was also granted. Another request was made that the season on some species of game be shortened. This was in part granted. It was also asked that game birds be not shot while sitting on the water or land, except when wounded. This request was granted. The request against shooting birds from motor boats was granted, and also the request against shooting birds during the night. Other requests, such as requiring a license to fish, making pump and automatic guns unlawful, putting a five-year close season on quail and the stopping of spring shooting were considered, but were not finally enacted into law, although many favored these measures.

**REQUESTS OF SPORTSMEN.**

The petitions and requests for the above requirements and changes in the law were for the most part made by sportsmen. Now, there are still other persons claiming to be sportsmen, who are advising, if reports published in some newspapers are true, that some of these sections of the law be repealed. The present warden made no recommendation to the legislature as regards the bag limit or the season on birds. These matters were left to sportsmen themselves, and to the members of the legislature when the matter was presented to them through the proper committees.

**RESTRICTIVE PROTECTION NECESSARY.**

Modern methods of hunting, which include expert shots with the most deadly repeating guns that can be made, and the use of decoys and trained dogs, make it necessary that what little game there is left receive stringent prohibitory and restrictive protection, or it will soon be completely exterminated. We must have birds for the protection of agriculture and horticulture, and some of our game birds are of the greatest value as protectionists along these lines. Hunters unrestrained would soon exterminate all the native game birds in the state. The wild turkey, the wild pigeon and the prairie chicken in the eastern two-thirds of the state afford good examples of what happens to game birds that are not protected.

**FARMERS AND THE GAME LAW.**

Again, the farmers and the landowners have their ideas about what a fish and game law should be. They raise and feed all resident game, and are the natural owners. As a rule, they are all in favor of protecting the game. All of the game birds are considered useful to horticulture and agriculture, and it is very natural that all persons who are engaged in agricultural or horticultural pursuits should wish to protect and keep the birds which are beneficial to them. They have been called "cranky," and sometimes other epithets have been applied to them because they will not allow any hunting on their farms. If it were not for the so-called "cranky" farmer who forbids hunting on his lands we fear there

would be very few game birds left in this state. No law can or ought to be passed that does not consider their interests. Most of the farmers are real protectors of resident game. Very few of them want quail killed, and we are unable to give any very good reason why they should be killed, although we realize that the quail is by far the finest game bird of its size in the world. Many of the farmer organizations have invited us, as state fish and game warden, to meet with them. We have met with them, advised with them and coöperated with them. We hope in the future to continue to coöperate with the farmers and to continue to receive their most valuable counsel and advice.

#### LEGAL HUNTING.

As a matter of fact, all the resident game birds in the state of Kansas could easily be exterminated, and that, too, in a few years, by the methods employed by some hunters who hunt according to law, or what they consider within the bounds of the law.

If each farmer in the state of Kansas should allow legal quail hunting for fifteen days each year on his farm, in the course of three or four years there would be few or no quail in the state. It is an easy matter for two or three good shots, with the best modern guns and well-trained dogs, to kill or cripple every bird in a flock, and this is what usually happens when the hunters follow up the birds.

The farmer who never allows hunting on his place is the greatest game protector the state has. From such protected centers the birds spread each spring to localities where few or no birds have been left.

#### THE LEGISLATURE AND THE GAME LAW.

If we should judge from the contents of a certain class of letters that come to the department, we might have reason to believe that there are people in the state who think that the present fish and game warden wrote a fish and game law and put in it such things as he saw fit, and that the legislature passed this without revision or amendment.

#### REVISION AND CODIFICATION OF THE GAME LAW.

What the warden did was to get together all the fish and game laws enacted by former legislatures, with the idea of having them revised and brought up to date to meet present conditions, and with the idea of having them enacted into one chapter.

By and with the aid of the fish and game committees of the house and senate, these laws were revised and codified and put in as good shape as possible, for the consideration of the legislature. The committees of the house and senate put in sections, took out sections and revised sections. All the petitions that had been sent to the department were presented to the committees and were considered at the proper time and in their proper places.

#### CONSIDERED BY THE LEGISLATURE.

The law, as prepared and revised by the committees, was presented to the house and senate for their consideration. While the law was being considered section by section it provoked many very enthusiastic discussions and interesting debates, both in the house and in the senate. No one was interested in the outcome of the law more than the fish and game

warden. Yet he did not ask a single member of the legislature to vote for, a single one of its sections. However, when asked to do so, he gave such information as he was able to concerning certain features of the law.

The legislature, like the committees, considered this law section by section. It revised and condensed many sections, some of which it was very difficult for members living in different parts of the state, where conditions were different, to agree upon. When agreements could not effected, compromises were brought about.

#### DUTY OF THE GAME WARDEN.

It is the duty of the fish and game warden, so far as lies in his power, to enforce the fish and game laws just as they were passed by the legislature. We have no alternative in the matter; we can not make changes that would suit people in certain localities; we can not grant permits to citizens to do anything that is not provided for in the law. We have tried, with the assistance of over 400 deputy wardens, to do our duty. If the law is not what it ought to be, let us try and make it better. Do not condemn the warden or his deputies for trying to enforce acts that the legislature placed in the statute books.

---

### THE WARDEN SYSTEM.

The law empowers the state fish and game warden to appoint one or more deputy fish and game wardens in each county in which ten taxpayers request him to do so. It is the duty of these county wardens to assist the state warden in carrying out the provisions of the fish and game law.

#### NO PROVISION FOR TRAVELING WARDENS.

The legislature made no provision for traveling wardens, who might be paid for their services and sent over the state to apprehend lawbreakers in places where for one reason or another the local officers had not succeeded in enforcing the law to the satisfaction of all parties concerned.

#### COMPENSATION FOR DEPUTY WARDENS.

The only compensation to be received by the deputy wardens is provided for in section 6 of the Session Laws of 1911, which says: "In each case of conviction there shall be assessed as part of the costs the sum of ten dollars for the person making the arrest, to be collected from the defendant, together with the mileage allowed by the law to constables."

#### WARDEN SYSTEMS IN OTHER STATES.

From a study of the warden systems of other states, we are convinced that no system is altogether satisfactory. Some states pay their wardens regular salaries, with necessary expenses. This has proved to be an expensive system and in many respects unsatisfactory. The officers and citizens of many localities frequently resent the interference of outside wardens. In cases where they coöperate good results are usually obtained. It might be wise to so amend the law that a limited number of traveling deputy wardens could be hired to do special work in localities where needed. They could work by the day or by the month as necessity might demand.

## THE LOCAL OR COUNTY WARDEN SYSTEM.

The system employed by our state, while not altogether satisfactory, has brought fairly good results. As a rule, the local wardens do good service, but the nature of their work is such that they are frequently unjustly criticised and do not receive the moral support that they should receive from good, law-abiding citizens. Many of them as officers are inexperienced men. They are faithful and conscientious, and mean to be fair and do the right thing. However, they are frequently separated from headquarters by long distances and must act upon their own initiative and depend upon their own judgment, not being able to seek counsel before making an arrest. It is not to be wondered at that they sometimes make mistakes when we consider the nature of the cases and the conditions they have to contend with. They spend much time in looking up law violations and in explaining the law and giving advice, for which they receive no compensation, and this work, with isolated exceptions, is done with an unselfish spirit for the public good.

## WARDENS CREATE RESPECT FOR LAW.

It must be remembered that it is no small part of the duty of the deputy warden to create respect for the fish and game laws as well as to apprehend violations. While we have little sympathy for the fellow who knowingly violates the law, yet we feel that there are cases where the deputy wardens can, and do, do much good by simply giving advice. This is especially true in cases of first offense, where boys as well as some older persons ignorantly violate some technicality of the law.

## WARDENS APPOINTED BY LAW-ABIDING CITIZENS.

The most satisfactory work and the best success in law enforcement has been achieved in localities where law-abiding citizens have had deputy wardens appointed on their own recommendations and then stood behind them in their efforts to enforce the law. In almost every locality where a body of law-abiding citizens announced that they would prosecute the person who violated the fish and game laws, through wardens appointed at their own request, the law violators ceased to operate. If they did not, one or two prosecutions usually were sufficient to induce respect for the law.

## FORM OF LETTER SENT TO DEPUTY WARDENS.

Mr. ———, ———, *Kansas*:

DEAR SIR—Inclosed herewith find certificate of your appointment as deputy fish and game warden; also a copy of the fish and game laws of this state.

You have been strongly indorsed by resident taxpayers and good citizens of your county, who want to see the laws fairly and impartially enforced, and I trust you will do your duty as an officer, being zealous at all times, but never officious, in carrying out the work of this department.

Your county attorney will be ready at all times to advise you how to proceed and to explain sections of the fish and game laws that may not be clear to you. It is his duty to prosecute all persons charged with the violation of the fish and game laws. You will be expected to apprehend all violators of the fish and game laws, and take them before the proper court for trial. I advise you to make a careful study of the different sections of this law. I would also advise you, when making arrests, to be careful. By this I mean that you should not subject

innocent parties to arrest. Be sure that the persons who are being arrested have violated the law, and that the evidence you have will probably convict them in court. Without good and clear evidence of violation you will find that it is hard to secure a conviction. To arrest persons and subject them to a trial in court where the evidence is not good not only does an injustice to the persons arrested, but subjects this department to more or less criticism, and reflects upon the dignity and efficiency of the general work that the department is trying to do. Your work should be done in a way that will command the respect and approval of all fair-minded people.

This department and your county attorney will always be ready to advise and help you in your efforts to enforce the fish and game laws. "Be sure you are right, and then go ahead."

You will find a form of oath attached to the bottom of your commission, which it will be necessary for you to swear to before a notary public and return to me.

Please report all prosecutions to the department.

Yours very truly,

L. L. DYCHE, *State Fish and Game Warden.*

## SPORTSMEN.

This department receives many letters from persons where such expressions as "we, the sportsmen," or the "sportsmen of our club," "our city," "our town," or "the true sportsmen of our county" or "locality," are frequently used.

The ideas of the people who call themselves sportsmen are so diverse and varied that we are very much at a loss to know what really constitutes a sportsman. If anyone can send us a definition of what constitutes a sportsman, and give the characteristics of a true sportsman that the sportsmen themselves will subscribe to, such person or persons will confer a great favor upon the department. The terms "sportsmen," "hunters," "pothunters," "market hunters" and "game hogs" are also constantly used in communications to the department. The warden has more or less business to transact with all people who take game and fish, and thus far he has not been able to classify them according to descriptions furnished by one another of each other.

### GENTLEMEN SPORTSMEN.

We know some gentlemen who, looked at from our point of view, we consider true sportsmen. They are in favor of game laws that will protect game and allow it to increase. They like to take a day off from business at the proper time and go into the fields for recreation. They thoroughly enjoy hunting for the sake of hunting, and not for the sake of killing. A few game birds and a good tramp through the woods and meadows, over hills and into hollows, satisfies them and furnishes what they see fit to call a "fine" or even a "glorious" day's outing. One of these gentlemen sportsmen told me not long since that he had rather kill six birds over his dog than to kill several times that many by any other method. Such sportsmen get great pleasure working their dogs in the field, and become fascinated with the fine development of instinct and sense shown in these animals in their hunt of game birds. These

men do not criticise the fish and game department for trying to do its duty along lines especially set forth by the provisions of the law. This class of sportsmen do not swear at the farmer or landowner who does not allow hunting on his place. They are quick to recognize the fact that from such centers of protection come the breeding stock that keeps up the general supply of game. Such sportsmen are not only active themselves in their support of the game laws, but they coöperate with the game wardens and with the farmers in their efforts to protect game. We consider their suggestions and advice most valuable, and we are always delighted to hear from these gentlemen sportsmen, and hope they will continue to coöperate with the department in making suitable fish and game laws for the state.

#### SPORTSMEN IN GENERAL.

However, a great majority of the people who call themselves sportsmen are surely not agreed on what they would like to have in the way of game laws. It will not be possible for them to have laws that will suit them, at least until they have agreed on what they should be. Parties calling themselves sportsmen are now asking for the repeal of certain sections of the law passed by the last legislature at the request of other parties calling themselves sportsmen. The question naturally arises, Who are the sportsmen of Kansas? And what do the true gentlemen sportsmen who are good, law-abiding citizens want in the fish and game laws? The present fish and game warden will be pleased to hear from these people, and he will be further pleased to coöperate with them in the framing of any law that seems fair to and good for all the people of the state.

---

#### RABBIT HUNTERS.

Before the present fish and game law was enacted many complaints were made to the Department of Fish and Game by farmers and owners of ranches against "rabbit hunters."

Under the old law, persons who hunted rabbits were not required by law to carry hunters' licenses. It would seem, judging from the reports that come to the department, that many hunters, and sometimes parties of hunters, would tramp through fields and pastures with dogs and guns shooting rabbits, and in many instances it was reported that these hunters shot things that were not rabbits.

When a game warden interfered with these parties he was told that they were only hunting rabbits and did not have to carry a hunting license. Much complaint was made by farmers and stock raisers concerning the damage done by such hunters. Many times these rabbit-hunting trespassers had packs of dogs with them. The shooting done by the hunters and the chasing of rabbits by the dogs frequently frightened domesticated animals, causing them to run into barbed wire fences, break out of their inclosures, or otherwise do damage to themselves or adjacent property. Numbers of domesticated animals were reported as having been shot, some killed and others crippled by these so-called rabbit hunters.

The law passed by the last legislature requiring rabbit hunters to carry licenses was not intended to protect the rabbits, but the farmers and stock raisers who are continually annoyed by rabbit hunters. But little complaint has come to this department on account of the enactment of this law, except from some parties in the western part of the state, where jack rabbits are a nuisance. In such places the people sometimes have what they call a "round-up" hunt for jack rabbits or for coyote wolves. From twenty-five to a hundred or more people frequently desire to join in these hunts. Many of the hunters do not have hunters' licenses.

A number of applications have been made to this department for permits to carry on these neighborhood hunts. The department has no authority to give such permits. There was no provision made in the law for conducting such hunting parties. Even though the members of such hunting parties carried hunting licenses, the trespass laws forbidding hunting on occupied lands without permission should be considered.

This department has no objection to such hunting parties, made up for the purpose of hunting wolves and rabbits, provided they can be conducted according to law. However, we desire to say that we have received many letters from parties living in districts where these hunts have been carried on, making protests and calling upon this department for advice and help. Complaints have been made in many instances that these hunting parties, in their chase for wolves and rabbits, cut and tore down fences, left gates open that allowed stock to escape, and did other and further damage by running over cultivated fields. Serious objections were made to such "reckless" hunting parties going through farms and over other grounds. We have no particular recommendation to make along these lines, but will favor any measures that may seem advisable for the benefit and protection of all parties concerned.

---

## SPRING SHOOTING.

Many states have passed laws prohibiting the shooting of game birds in the spring. All noted biological students of bird life in the country advise such a law. It does not seem right that even game birds should be killed during the mating and breeding season. I regret to say it, but in years past I have killed ducks and other water birds in the spring that had eggs in them almost ready to be placed in a nest. It is wrong to kill such birds. Why not let them live a little longer and give them a chance to produce a brood of a dozen or more young birds? Then there would be many more birds to kill in the fall of the year, when they are young and tender and very much more desirable for table use.

### DUCKS NESTED IN KANSAS.

Formerly the mallard duck, the wood duck, the blue-winged teal and a few other species nested in our state. Now a duck has a slight chance of staying anywhere in the state twenty-four hours without having a load of shot fired at it. They might nest in the state now in favorable localities if they received proper protection.

## NORTHERN BREEDING GROUNDS.

So much of the northern country, both in the States and the province of Canada, has been opened up to settlement during the past few years that the natural breeding grounds for wild water birds has been much reduced in area. Under such conditions, if the birds are to be continually harrassed by gunners, and their ranks continually decimated during the mating and breeding season, their fate in the future can easily be predicted.

By protecting these birds we will protect our own interests and the interests of those who come after us. If we do not protect the birds during the breeding season and the grounds used for nesting purposes, I do not see how we can expect to have many birds in the future.

While the above expresses our sentiments, we are not deaf to the complaints of Kansas hunters who, when asked to favor laws against spring shooting, refer to our sister states, where open seasons for shooting is allowed as follows for ducks and geese:

Nebraska, September 1 to April 6; Missouri, September 15 to May 1; Oklahoma (ducks), September 1 to April 1 (geese not protected); Colorado, October 1 to March 1; Texas, gives no protection to water birds; Louisiana, October 1 to March 1.

We extend an earnest invitation to Nebraska, Missouri, Oklahoma, Colorado, Texas and Louisiana people to join hands with us and help us, that we may all get right on this migratory-bird proposition before it is too late. Let us give some consideration to wild life, and thus show to future generations that we are at least as good as the wild and savage race of people that formerly occupied the country—a race that we are exterminating, but a race that did not exterminate the wild life indigenous to the mountains, forests and plains in which it lived.

---

SONG AND INSECT-EATING BIRDS.

The legislature of 1911 was the first in the state of Kansas to pass a general law protecting song and insect-eating birds. There are a few birds very valuable for destroying the seeds of noxious weeds that technically may not come under the provisions of the law, as passed. We would recommend that all birds, except those that are specially provided for as game birds and those specially mentioned as outlaws, be protected all the time.

Birds are the natural enemies of insects and the natural friends of agriculture and horticulture. Most young birds are fed upon insects. It has been estimated that each young insect-eating bird eats an amount of insect food equal to its own weight each day from the time it is hatched until it is ready to fly. The insect-eating bird life is worth millions of dollars to the state each year, and should be protected if for no other reason than for its economic importance.

Many cases have been reported to the department where boys with small guns kill birds. We have been loath to submit boys under sixteen years of age to arrest, but have advised with them and their parents. Children should be taught, in every schoolhouse in the state, the value

of bird life. By this means a true respect for bird life can be created. Boys who are now killing birds with slingshots and airguns might be made to see and appreciate the value of bird life to that extent that they would not only protect birds and their nests in the fields, but would be willing to put up bird houses that would afford nesting places for the wild birds near their homes. A boy should be a bird's best friend.

I know of no greater enemy of birds than the domestic cat. Quail, robins, thrushes and most of the common song and insect-eating birds find in the cat their most dangerous enemy. I am puzzled to know just what to recommend about cats. Most cats are of little or no value, and if nine-tenths of them were dead, bird life (which is of great value to the country) would be greatly increased. And there would surely be a great increase in the number of quail, robins and thrushes that would make their permanent living quarters near barnyards and in orchards and vineyards. It may be necessary to have a cat license.

---

### THE NEW FISH LAWS.

The last legislature passed practically a new law to govern the fishing interests in the state of Kansas. This law contains a number of new features. However, the intent and purpose of this law is to so protect and so increase the supply of fish in Kansas ponds, lakes and streams that there will be more fish for more people.

One of the features of the law not well understood is the provision that only one hook can be used on a line. The object of this clause in the law was to prevent catching fish with a bunch of hooks tied on a line and used as a snag- or grabhook. When the water is cold, and especially when it is covered with ice, it frequently happens that the fish bed in deep water beside an old log or other convenient places. This makes it possible for certain persons with a bunch of hooks on the end of a line to drop the hooks into such schools of fish and to snag the fish by giving the hooks a quick jerk. Great numbers of fish are sometimes taken in this way. Many cases have been reported where fish have been taken below a dam or other favored place where fish naturally congregate, by the use of grabhooks or snaghooks.

There could really be no objection to fishing in the old-fashioned way, with two or three hooks on a line. It is hard to frame a law that will prevent using three or four hooks on a line as grabhooks and at the same time allow a person to fish with three or four hooks on a line. Twenty-five hooks may be used on a "trotline," provided they are a reasonable distance apart and used in a stream as a "trotline." Most fishermen use but one hook on a line, and prefer this method of fishing to using three or four. The law does not prevent using several lines each with one hook on it.

Another feature of this new fish law provides that any citizen of the state of Kansas may obtain a permit from the fish and game warden to own and use a seine with meshes three inches square, during certain seasons of the year and under certain prescribed conditions. This law makes it possible for a citizen to own and use a seine. He can take a

number of persons with him to help operate this seine. The idea of a three-inch-mesh seine is that fish weighing from three pounds upwards may be caught. After fish reach this size it is proper that they should be caught and used for food. Many of the larger fish, such as the buffalo and the carp, rarely bite a hook, and when they do they are hard to land. By the use of a seine they can be taken readily and lawfully.

A seine with meshes three inches square makes it possible for the young fish up to three pounds to pass through its meshes, and as most fish spawn at least once by the time they reach the weight of three pounds, this provision of the law guarantees a continual supply of fish in the streams. It seems to us a wise provision of the law that protects the young fish until they can spawn at least once before they can be taken with any kind of a net or seine. After the fish have reached a size larger than three pounds it seems not only legitimate but advisable to allow them to be caught by use of a seine and used for food.

At first people were inclined to make light of this provision of the law. However, letters received from persons who have used these seines indicate that they are pleased, and they pronounce the law a good one, as it works for the benefit of both the fish and the fisherman. One correspondent writes that the farmers in his locality are pleased with the law. He said that "the farmers do not have time to fish with hook and line, and when they do they seldom catch anything." "This law," he continues, "makes it possible for the farmers to get fish without violating the law."

---

## FISH DISTRIBUTION.

Fish for brood-stock purposes are raised at the hatchery and distributed to different parts of the state from the state fish car. Persons who want fish should apply to the Department of Fish and Game and get an application, which they can fill out and return to the department. This enables the department to furnish the necessary information to all applicants. There are fourteen tanks for transporting fish in the car, capable of holding 2000 gallons of water. The new water-supply system that we introduced for keeping the water fresh and aerated makes it possible to carry from 500 to 1200 fish in each tank, the number depending upon weather conditions, temperature of the water and the kind and size of fish to be transported.

We have distributed over 200,000 fish since we have been warden. About two-thirds of these were placed in ponds in different parts of the state, and about one-third were turned loose in the streams. The kinds distributed were for the most part bass, giant crappie, bluegill, sunfish and bullhead catfish.

The demand for fish, which has come from nearly every county in the state, has been several times greater than the supply at the hatchery. We have had good success in raising fish, but have had only seven ponds for breeding and raising them. The new hatchery, which will be completed in October, will add eighty-three breeding, nursery and stock ponds to the plant. These ponds will average about one acre each in size. There will be many stock ponds where fish can be held until they are one

and two years old, and there will be food enough in these ponds so that the young fish will not feed to any great extent upon each other.

During the past season the department handled about 75,000 fish for stock and breeding purposes, making nearly 300 deliveries. We continued the experiment that we started two years ago of distributing two- and even three-year-old fish. The experiments have proved very successful. The advantages of stocking the ponds and streams with fish large and old enough to spawn are many.

The experiments and the results will be set forth later in a bulletin. About 30,000 two- and three-year-old fish were distributed in stock ponds for the state. Selected specimens from this supply will be used to stock the eighty-three ponds of the new hatchery.

---

### NOTES ON THE NEW AND IMPROVED FISH HATCHERY.

The contract for building the new and improved fish hatchery at Pratt, Kan., was let to James A. Green & Co., Ltd., of Chicago, November 21, 1911, for approximately the sum of \$50,667.22. The following include the chief items in the construction of this hatchery, namely:

A concrete dam 500 feet in length, with earth-embankment extension of 146 feet built over piling. A concrete intake chamber, with bronze and iron gates and other appurtenances for controlling the water. A water-supply conduit of 21-inch vitrified clay pipe, 6875 feet in length, with 10 manholes and other structures. Approximately 124,000 cubic yards of levee embankment. Approximately 880 feet of 12-inch, 4000 feet of 10-inch and 17,000 feet of 8-inch vitrified clay pipe, laid in trenches from 3 to 9 feet in depth.

There are 94 concrete structures and water transmitters, with 191 bronze and iron sluice gates, mostly 8-inch, and five cast-iron flood gates. There are 300 wire-mesh screens, 30 x 36 inches. These screens were made by lacing wire-mesh screening, by the use of copper wire, on frames made of  $\frac{3}{4}$ -inch wrought-iron pipes.

The above includes some of the things specified in the building of the new hatchery.

The eighty-three new ponds now being added to the eleven in the old hatchery will give ninety-four for immediate use. Plans are drawn for the addition of seventeen more ponds. All told, the new pond system will cover 160 acres of land, a strip one-quarter mile wide and one mile long. The ponds will average about one acre each in surface area, and will furnish something like fifteen miles of shore line for old fish to breed on and the young fish to feed on.

The contract time for finishing this part of the fish-hatchery work was extended from August 1, 1912, to October 16, on account of much bad weather when the work could not be carried on.

Plans have been prepared and approved for the construction of twenty-two new buildings on the hatchery grounds. Contracts for these buildings were let September 19, 1912, the most important of which will be a fish and game building, to be used for offices, library, laboratories and

other purposes connected with the management of fish-hatchery business. This building will have an aquarium annex, to be used in connection with the laboratories, where investigations and experiments will be conducted. There are plans for residences and cottages for the assistants and caretakers, who should live on the fish farm, and plans for power house, barn, tool houses and such other small structures as are needed on the hatchery grounds.

The contract for the fish and game building and the power house was let to Horner Bros., of Topeka, Kan., for approximately the sum of \$19,246.

The contract for the warden's residence, superintendent's cottage, the three cottages (one for the farm man, one for the water man, one for the fish man), the barn and fifteen small tool houses, was let to Stansbury & Hardman, of Parsons, Kan., for approximately \$9755.94.

Bids for the above contracts were opened and considered by the Regents of the University October 19, 1912, at Lawrence, Kan.

The contract time for finishing the above work was fixed at March 1, 1913. Proposals for heating, plumbing and other related matters will be considered the 22d of October, 1912.

Written October, 1912.

## FINANCIAL STATEMENT.

### FISCAL YEAR ENDING JUNE 30, 1911.

Balance, 1909 .....	\$20,297.07
Collected 1910 .....	30,150.40
Collected 1911 .....	31,078.90
Total .....	\$81,526.37
Transferred .....	7,258.40
	\$74,267.97
Expended March 16 to June 30, 1911.....	4,156.46
Balance .....	\$70,111.51

### FISCAL YEAR ENDING JUNE 30, 1912.

Balance from 1911 .....	\$70,111.51
Collected during year.....	41,123.00
Total .....	\$111,234.51
Expended during year.....	50,653.47
Balance .....	\$60,581.04

Money received and turned over to the state treasurer for hay sold from the fish-hatchery grounds:

June 3, 1910.....	\$48.00
June 15, 1912.....	321.50

The limitations put upon this report does not permit of a detailed statement of accounts. Vouchers for all moneys spent can be found filed in the state auditor's office. Copies of these are also on file in the office of the state fish and game warden, at Pratt, Kan.

## LETTERS AND FORMS.

## LETTER ABOUT FISH AND THE FISH HATCHERY.

This is the form of a letter sent to citizens of Kansas when a blank application for fish for brood-stock purposes is forwarded to them:

DEAR SIR—The state fish hatchery is located at Pratt, Kan. The new hatchery now being built will have about 100 acres of water, divided into about 100 breeding and nursery ponds. In this hatchery, which is spread over a piece of ground one mile long and a quarter of a mile wide, the department will undertake to raise fish to stock the streams and ponds of Kansas. The fish raised will be of the common native varieties, such as bass, crappie, sunfish and catfish. If you have a stream or a pond that you desire to stock, get into communication with the Department of Fish and Game; get one of its blank applications for fish, and carefully fill it out.

It is the chief business of the state hatchery to raise fish for brood-stock purposes. The fish will be delivered at your nearest railroad station without cost. The number distributed each year will depend upon the crop raised at the state hatchery, and it will be proportioned in delivery to the water area to be stocked.

It is expected that those who receive fish will give them proper attention and protection. It will be of little or no use to stock streams and ponds if the fish are destroyed before they have had time to reproduce. Success will depend largely on your ability to care for and handle the breeding stock. It is not advisable to place young fish in a pond or body of water, limited in size, where there are old game fish, such as black bass or channel catfish; the young fish would soon be devoured as food. A good growth of plants afford more or less protection, as well as food, for young fish. Crappie and bullhead catfish are among the very best fish for ponds.

Bulletins on "Ponds" and on "Pond Fish" have been issued by the department. They can be had by sending four cents in stamps for each. A third bulletin on "Pond Fish Culture" is being prepared. Through these bulletins the department hopes to give much needed and valuable information.

Please report your failures and successes to this department, and receive such information as it may be able to furnish you.

The fish car makes trips during the spring and fall. You will be notified from ten to fifteen days before it starts on its trip through your locality, and later of the exact hour of its arrival at your station. Special instructions will also be sent you for the care and transportation of the fish from the station to the water to be stocked.

L. L. DYCHE, *State Fish and Game Warden.*

This is the form of application the department sends to citizens of Kansas who desire fish for their ponds, lakes or streams:

## APPLICATION FOR FISH.

*To the State Fish and Game Warden:*

Name of applicant (write plainly) .....  
 Post-office address: Town of ....., county of .....  
 Date of application ..... R. F. D. No. ....

1. Name of body of water to be stocked .....
2. In what county? ..... 2a. Near what P. O. (town)? .....
3. If a stream, give idea of depth and width .....
4. Where does it empty? .....
5. If a lake or pond, give area in acres .....

6. If a lake or pond, give source of water supply .....
7. Give greatest depth of water ..... 7a. Is it clear or muddy? .....
8. Is bottom sand, mud or gravel ..... 8a. Does it ever go dry? .....
9. What kind of fish does the water now contain? .....
10. Have fish ever been planted in it before? .....
11. When? ..... 11a. What kind? .....
12. Have the planted fish or any others ever been successfully raised in this water? .....
13. Does any substance empty into the water that would pollute it? .....
14. What is the sentiment in the locality in regard to laws for fish protection? .....
15. Are the laws well enforced? .....
16. Who is your fish and game warden? .....
17. Is his work satisfactory? .....
18. What is your nearest railroad station? .....
19. On what road? .....
20. How often do you receive mail? .....
21. Will you meet the fish car at the railroad station to get fish for the above-described water? .....
22. How long does it take to drive from station to water to be stocked? .....

REMARKS: (Make remarks on other side of the sheet.)

#### LETTER TO CITIZENS ABOUT DEPUTY WARDENS.

The following is a form of letter which the Department of Fish and Game sends out to citizens of the state of Kansas who desire the appointment of deputy fish and game wardens in their localities:

#### *To the Law-abiding Citizens of Kansas:*

GENTLEMEN—The Department of Fish and Game of the state of Kansas considers it a matter of first importance that good and able men be secured for deputy wardens.

Enclosed you will find a blank form of application. Forms like the enclosed are being sent to organizations of good citizens in every part of the state. By this means the department hopes to call the attention of the law-abiding citizens to the fact that it needs help in securing good wardens; and it further hopes that those who receive these blanks will show sufficient interest in the matter to recommend one or more first-class men who, in their judgment, would make good officials.

The demand for good, active deputies is emphasized from the fact that complaints are almost daily sent to the department concerning thoughtless and irregular persons who are violating our fish and game laws.

Are you interested in the work of the department and its future development? If so, please show your interest and good will by aiding the department in securing good wardens.

Your local warden should be one of your best citizens, and he should receive not only your moral but your active support. You should not only stand by him in his efforts to bring law violators to justice, but you should make it a part of your business to assist him. If he should arrest you for violating the law, please remember that he is only performing his sworn duty as an officer; for this he should receive your commendation and that of all good, law-abiding citizens of the community.

The demand for good home and county deputy wardens is all the more imperative since there is no provision in the law for traveling wardens who might be hired and sent to different parts of the state.

The department not only desires to cooperate with you in caring for the fish and game already in your neighborhood, but it hopes to be able to increase the supply by furnishing you with fresh stock from time to time.

Will you protect your thickets and fields, your ponds and streams, and give both fish and game a chance to increase and become plentiful once more?

With this idea in view, let us work together for the common good, so that when a law-abiding citizen desires "to go a-hunting" the woods and fields will be full of birds and beasts; and when he wants "to go a-fishing" the ponds and streams will be alive with good fish just waiting to be caught.

Respectfully submitted.

L. L. DYCHE, *Fish and Game Warden.*

The following form of application is sent to those who desire appointments as deputy fish and game wardens:

**APPLICATION FOR POSITION AS DEPUTY FISH AND GAME WARDEN.**

To the Kansas State Fish and Game Warden: Date .....

Name of applicant .....

P. O. address ..... Town ..... County .....

Occupation ..... Age .....

How long a resident of the state? .....

Have you ever acted as deputy before? ..... If so, how long .....

How many arrests did you make? .....

How many convictions secured? .....

We, the undersigned, desire to present the name of Mr. .... above mentioned, as a deputy fish and game warden. We personally know him, and believe him to be a man of good character and a law-abiding citizen, and believe further that if appointed he will do everything in his power to see that the fish and game laws of the state are respected and properly enforced in the localities where he operates.

Signatures of ten or more resident taxpayers who desire to recommend Mr. .... for deputy fish and game warden:

NAME	P. O. Address.	Occupation.	How long a resident of the county.
------	----------------	-------------	--

Special letters of recommendation from county officials and other good citizens will be appreciated by the Department of Fish and Game. They should accompany this application when returned.

I, ....., do hereby promise and agree that, if I am appointed deputy game and fish warden, I will be vigilant and active in enforcing the fish and game laws, and will use my best endeavors to secure the arrest and conviction of all violators of the law, without fear or favor.

The following form of bond serves as a sample for those who desire to put up a bond for a permit to use a seine with meshes three inches square, as provided for by law:

**BOND FOR USE OF SEINE.**

State of Kansas, ..... County, ss.

KNOW ALL MEN BY THESE PRESENTS, That we, ....., as principal, and ..... and ..... as sureties, are justly and firmly bound unto the state of Kansas in the sum of fifty dollars (\$50).

The conditions of the above obligation are that, whereas, the above-named principal has made application to the state fish and game warden of the state of Kansas for a permit to own, possess, and use a three-inch mesh seine:

Now, THEREFORE, If the said principal shall well and faithfully observe and comply with all of the requirements of the law regulating the size of mesh and use of such seine, then this obligation shall be null and void, but otherwise shall remain in full force and effect.

WITNESS our hands, this ..... day of ..... 1911.

.....  
Principal.

.....  
Sureties.

*Affidavit of Sureties.*

State of Kansas, ..... County, ss.

We, the undersigned, sureties upon the above bond, do solemnly swear that we are residents of said county and state, and that we are worth at least one thousand dollars (\$1000) in property within this state, over and above all debts and liabilities and exclusive of all property exempt by law from sale or execution. So help us God.

SUBSCRIBED AND SWORN TO before me, this ..... day of ..... 1911.

Notary Public—County Clerk.

(My commission expires.....)

The following form of permit is issued to those who put up a bond for the lawful use of a seine with meshes three inches square:

*STATE OF KANSAS.**Department of Fish and Game.**PERMIT FOR USE OF SEINE.*

I, the undersigned fish and game warden of the state of Kansas, do hereby grant a permit to ..... of ..... county, Kansas, to own, possess and use, subject to all requirements of law, a three-inch mesh seine from this date until .....; said person having executed a bond as required by the laws of this state and approved by me. This permit shall in no wise be construed as authorizing any other person than the one named herein to have such seine in his possession, but will authorize such person named herein to be accompanied by others assisting him in the management of said seine.

By "three-inch mesh" is meant a mesh three inches square. No seine shall be used between April 15 and June 15 of any year, or between December 15 of any year and March 15 of the following year. No seine shall be used within 300 yards of any dam, or within 200 yards of the mouth of any stream or river. No fish weighing less than three pounds shall be taken from the water by the use of any seine, except minnows for bait, as provided by law.

See provisions and requirements of fish and game laws.

WITNESS my hand and seal of office, at Pratt, Kan., this ..... day of ..... 1911....

State Fish and Game Warden.

The following is the form of application and the form of a hunter's license used by the Department of Fish and Game in Kansas at the present time:

*APPLICATION FOR RESIDENT'S LICENSE TO HUNT IN KANSAS.*

Fee, \$1.

No. ....

Name of applicant.....; town of....., county of.....; age.....; color of eyes.....; color of hair.....; weight.....lbs.; height.....; date of issue.....1911.... (This coupon to be retained by the county clerk.)

## LICENSE TO HUNT.

Resident's fee, \$1.

..... Kan., ..... 191.....  
By virtue of this license, Mr. .... of ..... county  
of ..... is permitted to hunt in the state of Kansas in the open  
season under restriction of the game law.

This license expires June 30, 1912.

..... County Clerk.

*Description and Signature of Licensees.*—Age.....; color of eyes  
.....; color of hair.....; weight.....; height.....

..... Licensee.

This license is not transferable.

The following is a synopsis of the Kansas fish and game law as printed  
on the back of hunters' licenses:

*Brief Abstract from Kansas Fish and Game Laws, 1911.*

The ownership and title to all wild animals, birds and fishes shall be  
and are hereby declared to be in the state. (See section 11.)

It is unlawful to hunt without a license, which must be carried on the  
person of the hunter. (See section 8.)

Fox squirrels may be killed from September 1 to January 1. Fur-  
bearing animals may be taken from November 15 to March 15. (See  
section 12.)

It is unlawful to kill or have in possession any song or insect-eating  
bird. (See section 15.)

It is unlawful to destroy the nests and eggs of birds. (See section 19.)

It is unlawful to kill geese and ducks except from September 1 to  
April 15; plover from August 1 to April 30; snipe from September 1 to  
April 30; prairie chickens from October 1 to November 1; quail from  
November 15 to December 1.

No game bird is to be killed while sitting on the ground or water, un-  
less wounded; or more than one hour before sunrise or one hour after  
sunset.

It is unlawful to shoot at birds from a motor boat. It is unlawful to  
use live ducks as decoys.

It is unlawful in any one calendar day to kill more than six geese or  
brant, or more than twelve game birds of any other kind. (See section 15.)

It is unlawful to catch fish except by use of a line with a single hook  
on it [but more than one line with single hook attached may be used]; or  
with a "trot" line with not more than twenty-five hooks attached to it; or  
with a seine with meshes three inches square, which can be used by per-  
sons who have executed a lawful bond. (See section 20.)

It is unlawful to buy, sell or ship game or protected birds. (See  
section 26.)

Nets, traps and unlawful devices for catching fish or game may be  
seized and confiscated, and, upon the order of the warden, destroyed.  
(See section 30.)

For violations of the fish and game laws, penalties may be assessed  
ranging from \$5 to \$500, with costs attached. (See section 37.)

It is unlawful to hunt, fish or loiter upon any enclosed premises with-  
out a written permit so to do, or to enter upon the public highway or the  
railroad right of way without having a written permit from the owner  
of adjacent lands so to do. (See sections 39 and 40.)

Send four cents for postage to the game warden at Pratt, Kan., for  
complete copy of the fish and game laws.

## TWELVE RULES FOR THE SAFE AND SANE USE OF A GUN.

The following is a list of twelve rules for the safe and sane handling of firearms, published by the Department of Fish and Game:

1. Never point the muzzle of a gun, whether loaded or not, toward any human being.
  2. Never take a loaded gun in the house.
  3. Never get into any kind of a vehicle—buggy, wagon, boat or automobile—with a loaded gun.
  4. Never climb over or through a fence, or jump a small stream, with a loaded gun in hand.
  5. Always think and look before you shoot.
  6. When carrying a gun, keep the muzzle pointed at the air above you or at the ground below you.
  7. Always hunt alone, or with some one who knows how to use a gun.
  8. Always look and see "if the sights are on the gun" before you shoot.
  9. Never stand around with your hand over the muzzle of the gun or lean on the gun with any part of your body.
  10. Keep cartridges out of the gun except when in the field where the shooting is to be done.
  11. Do not borrow your neighbor's gun.
  12. Do not loan your own gun.
- By obeying the above rules you will avoid accidents and save human lives.

---

## CONVICTIONS SECURED FOR VIOLATIONS OF THE FISH AND GAME LAWS.

Below is a list of convictions for the fiscal year ending June 30, 1912, as far as reported. Before the last legislature enacted a law requiring magistrates to report to the fish and game warden prosecutions and convictions, there was no law requiring reports. Even now, with a minimum fine of one dollar, it is with more or less difficulty that reports of arrests and convictions are secured. We do not have space to publish names of parties convicted, and would not care to do it if we had. In most cases it was the first offense, and in many cases the law was violated through ignorance or thoughtlessness. We do not desire to make a record by securing a large number of arrests and convictions. Our deputy wardens are advised not to submit any one to arrest unless the evidence of law violation is such that it becomes absolutely necessary to take such a step. While we understand that it is our duty to arrest people who violate the law, and while we propose to do our duty, yet we desire to use every

effort possible to induce a respect for the law that will reduce the number of arrests to a minimum. The list of convictions is as follows:

Illegal fishing .....	72
Hunting out of season .....	11
Hunting without license .....	80
Hunting without permission .....	37
Hunting on Sunday .....	1
Violating fish and game laws .....	66
Trespassing .....	1
Killing protected birds .....	14
Killing protected game .....	1
Trapping without license .....	4
Trapping out of season .....	1
Total .....	<hr/> 288

## *Sixth Biennial Report.*

---

The State Printing Committee having decided to make all reports covering fiscal years only, the following report covers, therefore, the time between January 1, 1911, and June 30, 1912.

The general health conditions of the state for the period of time included in this report have been fairly satisfactory, viewed from the standpoint that there were no great or general outbreaks of malignant diseases, although viewed from the standpoint of the up-to-date sanitarian, familiar with the cause and dissemination of preventable diseases, the situation is not so encouraging. In other words, there has been a great deal of sickness and a good many deaths in Kansas during this period of time, as well as during other periods of time now passed, that with our present knowledge might have been prevented.

The work of the various divisions of the department has been accomplished, with such means as the legislature provided, in a satisfactory fashion, although each succeeding year finds the work in the various divisions largely increased.

### EPIDEMIC POLIOMYELITIS (INFANTILE PARALYSIS).

Following the rather severe epidemics of 1909 and 1910, there was a gradual diminution of the incidence of the disease during 1911. The work of investigation undertaken by the department to determine, if possible, the cause of the disease and the method of dissemination of the supposed infectious material has been continued, and much valuable information has been secured. The disease has been experimentally produced in monkeys at our laboratories in the School of Medicine at Rosedale, and has also been transmitted from monkey to monkey. Investigation of the incidence of the disease in domestic animals has also been undertaken, but without positive results up to the present time. This work has been under the direct supervision of Dr. A. L. Skoog of the School of Medicine of the University of Kansas.

### PELLAGRA.

In 1911 eleven cases of pellagra were reported to this department, all but one of the cases occurring in the southeastern part of the state. Careful investigation of these cases revealed the fact that they were all residents of the state, there being but two instances where there was a possibility that the infection occurred outside the state. This leads to the belief that

the infectious agent, whatever it may be, is present within the borders of the state, and we have therefore undertaken investigation to determine, if possible, the nature and the source of this infectious agent.

Prof. S. J. Hunter, state entomologist of the University, has kindly consented to join with this department in such investigation, and an attempt is being made to determine whether or not the so-called Sanbon theory is true; that is to say, whether or not the disease is transmitted through the bite of what is called a "sand fly." Accordingly, a careful survey has been made of the section of country in which these patients are found, to determine the presence of the sand fly, and in every instance thus far examined the sand fly was found in near-by streams. The question then resolves itself as to whether or not the sand fly is the active agent in the transmission of the disease. Experimental work was carried on last year and is being continued this year with monkeys, in an effort to determine the truth or falsity of the Sanbon theory, and the department expresses the hope that sufficient funds may be given us by the legislature to carry on these experiments to completion.

#### EPIDEMIC CEREBROSPINAL MENINGITIS.

During the winter of 1911-'12 an unusually large number of cases of epidemic cerebrospinal meningitis occurred in this state, most of them in Kansas City, Kan., though the disease could be said to be epidemic in the two Kansas Citys. About 300 cases occurred within the state during the winter, with a mortality of about 65 per cent. The policy of the department of furnishing antimeningitis serum for the treatment of indigent cases proved to be exceedingly valuable and fortunate, inasmuch as at one time we were the only source of the serum west of Chicago, and thus we were enabled beyond any manner of doubt to save the lives of a number of people by having this serum for distribution. More will be said concerning the distribution of serums, antitoxins and vaccines under the heading of "Antitoxins," etc.

#### RABIES.

The prevalence of rabies among dogs and other domestic animals in this state has been increasing to an alarming degree during the past few years. I believe it can be said without exaggeration that there is scarcely a county in the eastern half of the state that has escaped infection in some parts of the county. Large numbers of live stock have been lost due to being bitten by rabid dogs, the loss totaling a sum which, while it is impossible to accurately state because of lack of definite statistics, yet, according to Commissioner Mercer's estimate, is at least \$25,000. In a number of instances my personal attention was called to the fact that entire herds of

hogs were thus destroyed. But the loss of stock is perhaps the least important feature of the situation, as the danger to human life can hardly be exaggerated. It is estimated from such sources of information as are at hand that some 200 persons have been bitten in Kansas during 1911 and 1912 by what subsequently proved to be rabid animals, mostly dogs. During that time there have been three deaths from rabies or hydrophobia, results of such bites reported to the department. The Bell Memorial Hospital at Rosedale, through this department, since October 1 has given thirty-nine Pasteur treatments to the citizens of Kansas who have thus been bitten. A great many persons have gone to the Pasteur Institutes at Chicago and at St. Louis, and others have been treated in Topeka and elsewhere.

It is urgently recommended that some definite, specific legislation be enacted to suppress and control the increasing prevalence of rabies.

#### ANTITOXINS, SERUMS, VACCINES, ETC.

For the past two years the department has been distributing to the indigent poor of the state free diphtheritic antitoxins, stations for such distribution being established in every town in the state having a population of 500 or over. This distribution is based on the proposition of being a necessary measure for the prevention and suppression of diphtheria. The scientific world is a unit in its indorsement of this method of treatment of the sick, and of immunizing those who have been exposed to prevent them from taking the disease. Indeed, it is now unanimously recognized that there is no other scientific or effective treatment for diphtheria. The antitoxins being somewhat expensive, many times the poor people were unable to purchase it, and thus the only means of saving a life was denied them. Therefore, on the order of the Board and with the consent of the governor, the emergency fund of the department has been used for this purpose, and it is confidently asserted that such distribution has saved the lives of some 230-odd Kansas people. These figures are based upon well-known tables of mortality which obtain throughout the world on the difference in the death rate in the disease where antitoxin is used and where it is not used. These tables are so uniformly accurate, not only in this country but abroad, as to leave no basis of doubt about the chance of recovery with and without antitoxins. Using these tables as a basis of computation, we arrive at the above result, which is indeed a matter for much congratulation. Moreover, the staying of epidemics by this means undoubtedly saves hundreds of other cases of sickness, with the usual proportion of deaths, which number, of course, can not be estimated.

As indicated under the heading "Cerebrospinal Meningitis," the department is distributing other serums and antitoxins

that are now the only means of combating certain maglignant diseases. Tetanus antitoxin has also been added to the stocks, and typhoid, scarlet fever, cerebrospinal meningitis and scarlatina bacterins have likewise been added, and are used in the suppression of epidemics of these malignant diseases.

It is therefore recommended that the legislature provide the department with a special fund of \$2000 per annum for the purchase and distribution of antitoxins, serums and bacterins to be used in the way and manner above indicated.

#### CANCER.

A study of the return of deaths and their causes reveals the startling fact that cancer is alarmingly on the increase, not only in this state but throughout the entire country. Several months ago our lecturer on tuberculosis discovered, in a certain community in central Kansas, in an area of something like a mile and a half square, populated by twelve families, that among those twelve families there were eleven cases of cancer. If the department had the ways and means at its command, there is offered in this situation a rare opportunity for the study of the disease.

The Kansas State Board of Health ought to be so equipped that it would be able to utilize such unusual opportunities as present themselves to study and, if possible, to add to the sum total of knowledge concerning a disease that carried off, in the first six months of 1912, 517 cancer victims in Kansas.

#### TUBERCULOSIS.

Under the appropriation the last legislature made for carrying on an educational campaign for the study and suppression of tuberculosis, the department undertook a sociological and industrial study of the disease in the ten cities of the first class in this state. This work was carried on by Dr. J. J. Sippy, under the direct supervision and direction of this department, and his report, which will be found on another page, is worthy of the most careful study and thought of every citizen of the state, and especially every member of the legislature. The conditions found in a number of the cities were scarcely short of appalling, and indicated very clearly the reason for the endless chain of cases that are annually recurring and contributing to the sum total of deaths in the United States from tuberculosis—the enormous number of 150,000 annually. The state registrar's report on the number of deaths from tuberculosis in Kansas for twelve months, based on accurate reports for the first six months of this year, indicates that there occur in Kansas annually 1244 deaths from tuberculosis. Experts who make an estimate of the number of living cases, based upon the number of deaths occurring annually, use figures from 4 to 10, but using the smallest figures given by any authority, namely, the figure 4, we have four times 1244, which

is 4976, the number of cases in the state at the time this report is submitted.

During the seven weeks our investigator was in Kansas City, Kan., twenty-four people died of the disease, and I submit that if a like number of deaths had occurred from any other infectious disease in a city of 83,000 in that same period of time we all would have been alarmed and would have said that an epidemic of that disease was prevalent. It is but fair to indicate that the conditions in Kansas City are unusual, due to unusual labor and social conditions. Many of the laborers and poorer families work in Missouri and have their residences in the meaner sections of Kansas, City, Kan., and thus these conditions are accentuated; but nevertheless they are real, and a menace to the community in which they exist.

A similar study was undertaken of the crowded condition of Mexican laborers in shacks and box cars on railroad rights of way, and an equally shocking condition was found there. In many instances large numbers of people were found living in windowless box cars, and in several cases persons in the advanced stage of consumption were living in those crowded conditions with other people, without any precautions whatever being taken to prevent infection.

The attention of the railroad companies was called to these intolerable conditions and their promise secured to see that they were rectified, but the main point I wish to present to the legislature is that infectious diseases are very closely related to certain social and industrial conditions, and that real prevention and suppression can not be successfully instituted unless the department has the ways and means for making these studies in the manner above indicated, including the study of the causes of diseases and the methods of dissemination which are not known, as in the case of infantile paralysis and pellagra.

#### AN APPEAL.

I therefore appeal to the legislature and to the people of Kansas that the department be provided with a sum, not less than \$10,000 annually, to be devoted to the study and prevention of communicable diseases, this sum to be in lieu of the \$10,000 hitherto appropriated for the study of tuberculosis only. This study comprehends the usual educational propaganda that always goes with research work.

I repeat in the most emphatic manner of which I am capable that the suppression and prevention of communicable diseases can not be successfully accomplished unless these means are provided for the department.

#### EMERGENCY FUND.

The legislature has been in the habit each legislative year of providing a \$5000 emergency fund for the biennium to the State Board of Health. As indicated above, this has been used

in the study of pellagra and infantile paralysis and for the distribution of free antitoxins. The department should have an emergency fund for the purpose of meeting great emergencies, such as in case of cholera or plague, in a sum of not less than \$10,000 annually. Since it is now definitely known that the plague is disseminated through the medium of the rat and the flea, and as infected rats and squirrels have been found at various points along the Pacific coast, and the disease exists at the time of this writing in Porto Rico and Cuba, with infected rats found at New Orleans, it is not at all improbable that, through the shipment of merchandise, plague-infected rats might be transported to almost any part of the United States.

In the case of cholera it has likewise been demonstrated time and time again that cholera carriers exist the same as typhoid carriers, and that immigrants from infected ports carrying the cholera vibrio may come to this country and go to its remotest parts. It is through this means that cholera gained a foothold in the United States last year.

These facts are mentioned to show the necessity of every state being prepared to meet emergencies of this kind, and I therefore earnestly request that the legislature provide the department with an emergency fund of \$5000 annually for the purpose of preventing the entrance into or the spread within the state of epidemic diseases.

#### QUARANTINE LAW.

The present quarantine law was written many years ago. The advancement in medical science in the knowledge of the cause and dissemination of disease is such as to make our present quarantine law out of date, and it is recommended that the quarantine law be rewritten so as to bring it up to our present knowledge of the control of communicable diseases, and thus make it efficient and serviceable in guarding the health of the citizens of the state.

#### VITAL STATISTICS.

The legislature of 1911 enacted our present vital-statistics law. The appropriation made for its enforcement was, however, inadequate, and thus the large amount of work following the enactment of a law such as this has been carried on under considerable difficulties. The statistical data of births and deaths that have occurred under the law will entitle Kansas to be classed in the registration area of the Bureau of the Census at Washington before long, provided proper ways and means are furnished for its complete enforcement.

The vital-statistics law is "the big family Bible" of the state. Hitherto we have been content to register only our thoroughbred stock, the babies being permitted to shift for themselves, as it were, or to take chances in proving citizen-

ship, if that question should arise in after years, or to make proof of claims in settling estates, pensions, etc., as best they could. It goes without saying that the provisions of the child-labor law can never be fully enforced unless there are some legal and effective means for registering the birth of the child. Hitherto the statements of the parents were the only methods for determining the age of the child, and too often it has occurred that these statements were prejudiced or untrue, in that parents desired their children to work. Moreover, many legal questions concerning the age of consent have arisen, in which the liberty of the individual was in jeopardy because of designing or blackmailing schemes. Then, again, the work for the control of communicable diseases can not be effectively accomplished unless there is a means for tabulating the deaths from these diseases, by which we may locate accurately and certainly the foci of infection, through which means we are able to apply preventive measures. Last but not least, it is the desire of the department to use the data thus gained for the purpose of social betterment throughout the communities of the state. Vital statistics have not often been treated in this way, but it seems there is a wide field of opportunity to study the causes and conditions, social and industrial, of certain morbidity and mortality rates, of deaths due to industrial accidents, violence and crime; also, the relations leading to the large number of illegitimate births, with due regard for the rights of the innocent babe brought into the world, whose rights are ordinarily disregarded, having no champion to see that their legal status in the community is preserved by proper records. It is manifestly the duty of the state to see that such rights are guarded, and thus we hope through the division of vital statistics to undertake such sociological investigations as will lead up to betterments in social and industrial conditions. In order that this may be accomplished it is necessary that we have an appropriation of not less than \$6000 for such purposes. All fees for the issuing of certified birth and death certificates are turned back into the state treasury as required by law.

#### DIVISION OF FOODS AND DRUGS.

The detailed report of the division of foods and drugs, under the supervision of the assistant chief food and drug inspector, Mr. Floyd Tilford, appears on another page, to which your attention is invited. This is a division of the department's work which economically brings great returns to the consumers of this state through the enforcement of the food and drugs law and the weights and measures law, both of which laws are under the direct supervision of our traveling food and drug inspectors. It is believed that a very conservative estimate of the savings to the consumers of this state in the matter of adulterated foods and drugs and short weights and measures

would be a million dollars annually, comparing the conditions that existed five years ago, previous to the passage of these laws, with the conditions as they exist to-day. This is such a staggering sum as to be almost beyond the belief of one who has not made the matter a subject of thorough investigation, and yet there are documentary evidences in the department that will substantiate the above claim. We have on other occasions used as an illustration the item of oysters as they were formerly shipped, in tubs, being refrigerated by ice placed in the tubs with the oysters. This ice naturally melted, and the melted ice was sold as a part of the oysters at the current rate of 50 cents per quart. An estimate has been based on the amount of oysters consumed in this state annually, with samples analyzed that were secured before the passage of the law compared with oysters as marketed in this state at the present time, which reveals a saving to the consuming public close to \$100,000 annually.

Take a single illustration of short weight on flour. When we began the inspection of weights on flour several years ago it was an exceedingly rare thing to find a sack of flour that was full weight; the sacked flour was short in weight all the way from one-quarter of a pound to three pounds. It is true that there is a certain shrinkage during certain seasons of the year by evaporation of moisture, and yet, from experiments conducted by Professor Willard on the loss of weight of stored flour, a quarter of a pound would be a reasonable amount for an average sack of flour stored under ordinary conditions. Moreover, freshly packed flour was found to be short in weight, in which there could be no claim made for shortage due to loss through evaporation. In a certain shipment of a car of flour from a mill having a capacity of 1500 barrels daily, we found that the shortage on that car of freshly packed flour was an amount, computed on the full capacity of the mill, that would make a net profit on short weight of \$65 per day. At this time the mill was running to its full capacity, and although I doubt if it does so run the year around, yet the point is that it was only one mill out of many; and whereas we find that most of the flour was formerly short in weight in the sack, it is my candid opinion that half a million dollars annually would not cover the item of short-weight flour, comparing conditions at that time with present ones.

Take the matter of marketing new potatoes: For years it has been the custom in the Southern states to harvest new potatoes during the wet season, or periods of time, for the express purpose of having mud stick to them in order that the weight might be increased, for new potatoes are always sacked and sold by weight. Two years ago one car of potatoes was carefully sorted out from the dirt, in which car we found something over 3400 pounds of dirt. Last year another car that was similarly treated revealed a ton and a half of dirt. With

the enormous amount of potatoes sold in this state, the dirt content, if approaching even in a small degree that of the two cars mentioned and two or three others which our inspectors found, would run into a sum almost beyond belief.

Before the passage of the law it was the rarest thing in the world to find a pure ground spice or genuine ground coffee. Absolutely pure maple syrup was unknown. Thus might be mentioned a multitude of articles of a similar nature which now are of high-grade quality, and while in some instances these purer articles of food and drugs are higher in price than the former adulterated products, yet in many instances, as in the case of oysters, they are not any higher in price, indicating that the adulterated content in them was pure graft.

The experience of our laboratories in the analyses of drugs reveals the fact that formerly drug adulteration was quite as prevalent as the adulteration of foods. This means not only a great economic loss to the consumer, but, what is vastly more important, a great danger, in that reliance for therapeutic effect is put in drugs that are not of standard strength and quality. I am glad to say that these conditions are now happily fast becoming past history.

Important as this economic feature for the enforcement of the food and drugs law is, yet perhaps what is of even greater importance is the changed sanitary condition brought about in places where foods and drugs are prepared, stored and sold. Particularly is this true in the case of slaughterhouses, meat markets, bakeries, restaurants and hotels, and in many of the poorly equipped grocery stores. Unquestionably much of the loss and waste in spoiled food products, as well as considerable sickness to the consumers thereof, was the direct result of filth contamination. It may be remarked in passing that most of the prosecutions brought by the department during the past biennium have been because of unwholesome and unsanitary conditions found in these places.

#### *Weights and Measures.*

With our small force of traveling inspectors and the large amount of work to be done, the department has been unable to inspect all scales for weights and measures, our work being confined almost entirely to the inspection of scales for weights and measures found in drug and grocery stores. We have on several occasions made special inspections of large wagon scales at different points in the state for the purpose of ascertaining the condition of such scales, and have arrived at the conclusion that from 25 to 35 per cent of all large wagon scales are not within the limit of tolerance—ten pounds to the ton. That is to say, they do not come within the ten-pound limit of weighing an actual ton, in some instances short-weighing and in other instances overweighing. When it is remembered what an enormous volume of commerce is transacted

over the wagon scales in this state daily, probably running into the millions of dollars each day in weighing farmers' produce, such as wheat, corn, oats and other grains, hay, cattle, hogs, and such merchandise as coal, ice, building material of all kinds, and other heavy commodities, it is apparent at once that if 25 per cent of these scales are without the limit of tolerance that business is not upon a sound basis, either from the standpoint of competition between merchants and dealers or from the standpoint of values received for money paid. It is therefore recommended that the legislature provide two special weights and measures inspectors, who will also be given the authority of sealing weights and measures, for which under the law they are entitled to certain fees, and it is believed that these fees will approximately cover the expense of such inspection. It is not infrequent that we receive urgent letters from farmers all over the state requesting the inspection of scales here and there, as they believe them to be inaccurate, which requests we are at present unable to grant.

One of the great economic questions in food supplies is that of cold storage of food products. The Association of State and National Food and Drug Control Officials have recommended a model cold-storage law for uniform adoption throughout all the states, which will be presented to the legislature with the recommendation that it be passed.

#### DIVISION OF WATER AND SEWAGE.

The report of the engineer of the State Board of Health will be found on another page, to which your attention is invited. Since the enactment of the so-called water and sewage law, in 1907, a vast amount of good has been done in the division of the Board's work looking toward the purification of city water supplies and in the securing of new supplies to cities that would not only be sufficient in quantity but wholesome in quality; also undertaking to prevent the pollution of the natural watercourses of the state by domestic sewage and industrial wastes, and to restore those that were overburdened with such sewage and waste to something like their former state of purity. This work has entailed a large amount of investigation and research, with results that are more than commensurate with the time and money expended. Most of our populous cities in the southeastern part of the state are wholly dependent for their source of water supply from the near-by streams; thus the question of the purity of such waters is of health and life importance. Gradually the cities located on streams that are used as a source of public water supply have put in sewage-purification plants, and cities using such streams as a source of supply have added to their water plant modern filtration apparatus, so that the number of cities in the state that are not using a pure and wholesome water is growing increasingly smaller each year.

At the request of this department, the federal government has completed the survey of the Missouri river, an interstate stream, the report of which is submitted in another place in this report. It is confidently hoped that those cities in other states now discharging their untreated sewage into the Missouri river may join with Kansas in constructing such sewage-purification plants as will insure the comparative purity of the Missouri river, which is being used as a source of water supply by more than a million and a half of people.

The improved condition of the water supplies in the state has been revealed in a lower morbidity and mortality rate from typhoid fever, and it is believed that the theorem propounded by a prominent sanitarium, that three times as many other diseases are prevented by the use of a pure water supply, will apply with equal certainty to the improved conditions of Kansas water supplies as above intimated.

Our chief handicap in the work has been lack of funds, the work having grown to such an extent that it has become necessary to have an assistant engineer, and our sanitary fund of \$2500 annually is therefore inadequate to carry on the work of this division. Moreover, it is greatly desired that additional funds be procured for the purpose of carrying on research work in the matter of treating industrial wastes, which has been undertaken in a small way this past year, and it is therefore recommended that our sanitary fund be increased to \$5000 annually.

#### HOTEL INSPECTION.

The work of inspection of hotels under the hotel law has been carried out to the best of our ability, chiefly through the county health officers and local fire marshals. The work has been well done in some counties, fairly well done in others, and indifferently done in still others, depending largely on the personnel and interest of the local health officers. Our experience in the enforcement of this law during the past four years has been such as to lead me to believe that it can not be uniformly and effectively enforced all over the state unless the inspection is under state inspectors, by which means local interference will be removed and compliance with the law obtained. It is respectfully recommended that the enforcement of the hotel law be given to the state labor commissioner, who has the inspection of all other public buildings excepting hotels, or that an independent commission be established which will be charged with the enforcement of the hotel-inspection law.

#### HEALTH OFFICERS.

The time has already come when the county health officer and the health officers of the cities of the first class are really the most important officials in their communities, when considered from the standpoint of the public-health service that

is now required of them under the present laws; and yet almost uniformly we find these same officials are the most poorly paid of any of the county or city officials.

Two years ago the State Board of Health, in coöperation with the School of Medicine of the University, established a summer school for physicians and health officers, the second annual school being held in June, 1912. The object of this school is to instruct health officers in the latest and most modern phases of sanitary work, including the nature and suppression of communicable diseases, the equipment and conduct of modern laboratories, the fundamentals of public hygiene and sanitation, including all of those essentials of hygiene related to the health officer's duties. In other words, the health officers of the state have thus been preparing themselves for competent service to the people, and this service should be promoted and recognized by such legislation as will attract the most capable, scientific physicians to the positions of health officers and will insure their respective communities a full measure of protection from conditions that menace the public health. I therefore recommend that health officers be put upon such a basis of salary, in accordance with population, as will be commensurate with their services, and also that attendance at the summer school by health officers be made compulsory, except in case of sickness.

#### SANITARY CONDITION OF STATE INSTITUTIONS.

All the state institutions have been visited by committees from the State Board of Health, and in a general way the sanitary conditions of these institutions have been found highly satisfactory. Special reports of these inspections can be found in the offices of the State Board of Health.

#### APPROPRIATIONS.

The following appropriations are recommended to conduct the department during the coming biennium:

	1914	1915
Secretary .....	\$2,500	\$2,500
Three clerks and stenographers at \$900 each.....	2,700	2,700
Sanitary fund for carrying out the provisions of chapter 382, Laws of 1907, and for investigations into stream pollution and industrial wastes.....	5,000	5,000
Miscellaneous and incidental expenses, including the expenses of the chief food and drug inspector to the annual conference of the Association of State and National Food and Drug Control Officials, as authorized in section 12 of chapter 266, Laws of 1907, and the expenses of a representative of the State Board of Health to the annual meeting of the State and Territorial Boards of Health and the conference of the surgeon general of the public-health service with the state health officers, as authorized by an act of Congress, July 1, 1902, and for other trips outside the state upon the order of the governor.....	3,000	3,000

For the purpose of the free distribution of anti-toxins, serums and vaccines to the indigent poor of the state.....	\$2,000	\$2,000
For original research and investigation into and for the suppression of communicable diseases and industrial and occupational diseases.....	10,000	10,000
Emergency fund to be used only upon the approval of the governor, for the purpose of preventing or suppressing epidemic diseases, the unexpended balance of the 1914 appropriation to be reappropriated for 1915.....	5,000	5,000
DIVISION OF VITAL STATISTICS.		
For the purpose of carrying out the provisions of chapter 296, Laws of 1911, known as the vital-statistics law .....	6,000	6,000
DIVISION OF FOODS AND DRUGS.		
Assistant chief food and drug inspector.....	1,800	1,800
Six food and drug inspectors, but in no wise shall the amount paid to any inspector exceed the scale provided in section 4, chapter 184, Laws of 1909,	9,000	9,000
Traveling expenses of inspectors.....	7,200	7,200
Samples of foods and drugs and incidentals.....	500	500
Salary of bacteriologist.....	1,200	1,200
For equipment and maintenance of state laboratory of hygiene .....	500	500
Expenses of members of Board, postage and incidentals .....	1,200	1,200

## ARGUMENT.

An increase in the sanitary fund is asked for the reason that the work in the division of water and sewage has grown until two engineers are required to properly take care of it. Moreover, in solving the problems of industrial wastes that are polluting many of our streams that are being used as a source of water supply, considerable research work must be done before it is possible to find a solution for the purification of such wastes. This work can not be done without an increase in appropriation for the sanitary fund.

Instead of using our emergency fund for the purchase and distribution of free antitoxins and for research work in the cause and dissemination of certain infectious diseases, such as infantile paralysis and pellagra, we are asking a special appropriation to be made for that purpose, in order that the emergency fund may be utilized only in case of great emergency—these funds in lieu of appropriations made hitherto for tuberculosis, for which we are not asking this biennium.

The appropriation of \$2500 a year for the division of vital statistics is insufficient to carry on that division's work, as indicated in another place in this report. The sum asked is the lowest possible sum for which this work can be efficiently performed.

We are asking an increase of the inspectors' traveling fund over what it was two years ago, as \$85 a month for traveling

expenses is entirely too small, and \$100 a month, the amount asked, is barely enough to keep the men on the road all the time.

The appropriation for samples is included in a separate item.

The amount for the Board's expenses is too small to have the full number of meetings annually as required by law; therefore an increase is asked.

It will be noted that with the elimination of the \$10,000 hitherto voted for a state-wide educational campaign against tuberculosis, which is not included in this budget, that the above amounts will not exceed in their total sum what has hitherto been appropriated by the legislature, and yet by this arrangement it will permit the department to carry on its work more efficiently.

Kansas opens wide her doors to all peoples. It is in the health of a state and the citizens thereof that it grows; it is not in disease that it erects—it is in pestilence that effort ceases and hope dies. In the not very long ago you created a department of health. You bade it guard the health interests of the citizens of the state; you gave it a trust that may not be broken; you charged it with a vigil that is sacred. Thus you assumed a duty; in fact, you tendered fealty to this one of your greatest departments—for did you not bid it watch over the lives and health of men, women and little children? Is there any right more important than the right to live? Do you prefer a higher death rate than a trifling increase in the tax rate.

*The wages of filth is disease, which neither creed, nor faith, nor party may forget!*

Respectfully submitted.

S. J. CRUMBINE, *Secretary.*

## SECRETARY'S REPORT.

THE SECOND AND THIRD QUARTERLY MEETING OF THE  
STATE BOARD OF HEALTH.

MARCH 1, 1911.

MR. PRESIDENT AND GENTLEMEN OF THE BOARD—The regular second quarterly meeting of the State Board of Health was omitted for the reason that there were not enough funds to hold the four regular quarterly meetings of the Board as provided by law, and it seemed expedient that the December meeting be omitted.

## EPIDEMIC ANTERIOR POLIOMYELITIS.

The epidemic of anterior poliomyelitis, prevalent in the state during the past summer and autumn, continued until cold weather came, since which time there have been no cases, excepting one case reported from Lyon county on February 15. The number of cases and deaths occurring during last year's epidemic, by counties, is as follows:

County.	Cases.	Deaths.	County.	Cases.	Deaths.
Atchison .....	1	0	Montgomery .....	1	1
Brown .....	15	4	Nemaha .....	2	0
Chautauqua .....	2	1	Norton .....	3	0
Cherokee .....	1	0	Osborne .....	1	0
Cheyenne .....	2	1	Ottawa .....	2	0
Clark .....	1	0	Pawnee .....	1	0
Cloud .....	8	1	Phillips .....	5	2
Crawford .....	11	2	Pottawatomie .....	1	0
Decatur .....	4	1	Pratt .....	2	1
Dickinson .....	1	0	Reno .....	4	0
Douglas .....	6	3	Republic .....	7	1
Ellis .....	4	2	Riley .....	6	3
Gove .....	1	1	Rush .....	2	1
Greeley .....	1	0	Saline .....	2	0
Greenwood .....	1	0	Scott .....	1	1
Hodgeman .....	1	1	Sedgwick .....	3	1
Jefferson .....	4	1	Shawnee .....	16	4
Jewell .....	4	1	Sheridan .....	3	1
Johnson .....	3	0	Smith .....	1	0
Kingman .....	2	2	Sumner .....	1	0
Kiowa .....	1	0	Wabaunsee .....	5	2
Leavenworth .....	2	1	Washington .....	2	1
Linn .....	1	0	Wyandotte .....	33	3
Lyon .....	1	0			
McPherson .....	14	4	Totals .....	196	48

Experimental work with monkeys has been carried on by Dr. A. L. Skoog at the University Hospital at Rosedale, and he has succeeded in transmitting the disease from one monkey to another, after the method of Flexner and Lewis of the Rockefeller Institute of New York.

The appearance of a case in Lyon county this early in the year does not auger well for the coming season. The suggestions of the State Board of Health made in the special meeting in July have been effectively carried out, and we have reason to believe that the epidemic has been held in check by these strict quarantine measures.

## WATER AND SEWAGE.

The existence of an unusual amount of typhoid fever in the cities of Leavenworth and the two Kansas Citys during the past season, with an extensive epidemic at Omaha, Neb., St. Joseph and Parkville, Mo., and the fact that all these cities secure their water supply from the Missouri river, naturally suggests that the cause of these epidemics is due to a polluted condition of the waters of the Missouri river, and also brings up for solution the old problem of the sanitary control of interstate streams. It is interesting to note that this is one of the problems which neither the federal government nor any single state has authority or power to solve and correct, due to our peculiar form of dual government.

The problem of the sanitary control of interstate streams has been brought to the attention of the federal government time and time again, and they have definitely decided that they have no such control of these streams. So it would seem that the only way in which a matter of such tremendous importance to the more than a million and a half of people who live upon the banks of this great interstate waterway, and who are dependent for their source of water supply on the same, is by a concerted and united action of the various sovereign states which touch its borders. I was therefore constrained to submit the matter to Governor Stubbs, requesting that he address the governors of the states of Missouri, Iowa, Nebraska and South Dakota, setting forth the facts before stated, and requesting that they appoint representatives of the health departments of those states to meet with representatives from Kansas, to the end that some common ground of action might be agreed upon whereby the purity of the waters of the Missouri river might be preserved.

Accordingly, a conference was called of representatives from the aforesaid states, to be held at Kansas City, at the Baltimore Hotel, on December 29, 1910. The representatives from Kansas included Doctor Allaman, mayor of Atchison; Dr. C. C. Goddard and Dr. J. L. Everhardy, of Leavenworth; Dr. Clay E. Coburn and Dr. Farquhard Campbell, of Kansas City, Kan.; and your secretary, representing the state at large. But owing to illness I was unable to attend, and therefore asked the engineer for the Board, Prof. Wm. C. Hoad, to represent this department, which he did with great ability.

After a discussion among the conferees present, and an organization, of which Dr. Allaman, of Atchison, was elected chairman, and Professor Hoad secretary, resolutions were passed and adopted, and the secretary instructed to prepare a memorandum of the meeting, including copies of the resolutions, which were to be submitted to the governors and the boards of health of the five states that were invited to the conference. Professor Hoad has accordingly submitted the following memorandum to this department, which is herewith attached and forms a part of this report:

*Memorandum of the Missouri River Sanitary Conference called by Governor Stubbs and held at Kansas City on December 29, 1910.*

After an initial statement in regard to the object of the meeting, the conference entered into a general informal discussion, in the course of which the following propositions were prominently set forth, namely:

*First.* That the Missouri river is an important water-supply stream, being used for this purpose by cities, aggregating a population of about 800,000, from Sioux City to Kansas City. St. Louis, 400 miles farther down, supplies its 700,000 people with water which is largely from the Missouri river. The water from the Missouri is essentially good water for municipal purposes and is readily purified.

*Second.* The river is receiving a considerable burden of city sewage and manufacturing wastes, and owing to the rapid growth of population and industries upon its drainage area, this burden of wastes is increasing

with each year. The sewered population upon the drainage area is estimated at from 1,500,000 to 2,000,000, of which over one-half discharges sewage directly into the main stream. No estimate of the amount of industrial wastes was given, but attention was called to the large packing industries at Omaha, St. Joseph and Kansas City. These wastes, while not in themselves disease-producing, help to form in the river a favorable environment for the multiplication of disease germs introduced from city sewers.

*Third.* The typhoid fever situation in several of the Missouri river cities was discussed in some detail by the conferees from these cities—notably, one very serious epidemic in Omaha, caused by the failure of the local water company to effectively purify the Missouri river water before pumping it into the city mains, was described by Doctor Connell of that city.

*Fourth.* A map of the drainage area of the river was presented, showing the principal centers of population, and showing particularly that the density of population from Sioux City to Kansas City is very great and is rapidly increasing. Also, the average and the low-water discharges of the river were given, together with other physical data relating to the regimen of the stream. A table was presented showing the distance by river between the principal cities along its bank from Sioux City to St. Louis, and the estimated number of hours occupied by water in the center of the stream in flowing from Sioux City to Omaha, from Omaha to St. Joseph, from St. Joseph to Atchison, from Atchison to Leavenworth, from Leavenworth to Kansas City, and from Kansas City to St. Louis, at time of average and of minimum discharge. A few fragmentary data on the bacterial content of the river at certain points were also given.

*Fifth.* It was the unanimous opinion of the conferees that any definite legislative action looking toward the limitation of the discharge of sewage and industrial wastes into the river should be made common to all the states contiguous to the stream. Much was made of the possible unfairness should one or more states fail to unite in such preventive or remedial action.

*Sixth.* There was considerable talk of trying to secure an investigation of the stream by the federal government. This idea was finally abandoned, both because little hope was entertained that a request for such an investigation would be acceded to, and especially because it was felt that to be effective with the legislatures of the several states the investigation should proceed from the states themselves. It was thought, however, that it might be possible for a joint state commission to secure the cooperation of the hydrographic branch of the United States Geological Survey or of the Marine Hospital Service.

The definite action taken by the conference consisted of the adoption of a resolution, and the appointment of a committee to endeavor to carry the spirit of the resolution into effect. The resolution declared that the sanitary condition of the Missouri river from Sioux City to the mouth was such that it was the judgment of the conference that a thorough investigation of the river should be made by a joint Missouri river sanitary commission, which should include representatives from at least Nebraska, Iowa, Missouri and Kansas. The committee appointed consisted of a representative from Nebraska and one from Kansas, who were instructed to draught a plan for the organization of such a sanitary commission, and to present this plan to the governors and health departments of the several states and ask for such legislative and executive action as might be necessary to perfect the organization. The general idea discussed and assented to in the conference was that this commission should consist of two or three commissioners from each state,

and that these should carry the investigation through to completion and report back to the several states in the fall of 1912.

The conference adjourned, subject to the call of the chairman.

The following is a copy of the joint resolution that will probably be recommended to the governors and heads of the health departments of the several states:

*"Joint Resolution, providing for a commission to investigate the sanitary condition of the Missouri river and to recommend measures to conserve the waters of the streams as a source of public water supply, and requesting the legislatures of the states of South Dakota, Iowa, Nebraska and Missouri to coöperate by appointing similar commissions.*

"WHEREAS, The Missouri river is at present used as a source of public water supply by a number of cities, both large and small, situated upon its banks; and

"WHEREAS, To all these cities the said river is the most available and practicable source of public water supply, and will continue to be so in increasing degree with the future growth in their population; and

"WHEREAS, The said river is known to be polluted by the discharge into it of unpurified city sewage and industrial wastes from the cities and manufacturing establishments upon its drainage area; and

"WHEREAS, The said pollution has already in certain portions of the river reached a point at which it constitutes a serious menace to the health of the inhabitants of the cities and towns along the said river, and

"WHEREAS, The said pollution must inevitably greatly increase with the growth in population and the development in industrial activity assured for the future, unless proper measures to prevent it are promptly taken; and

"WHEREAS, The protection of the Missouri river against injurious pollution and the conservation of its waters for purposes of public water supply are possible only by the joint action of the legislatures of the several states affected thereby: therefore, be it

*"Resolved by the Legislature of the State of Kansas, That the governor of the state of Kansas appoint a commission of three persons to coöperate with similar commissions appointed from other states in an investigation of the sanitary condition of the Missouri river with reference to the future use of the said river as a source of public water supply; that the commissioners so appointed shall serve without compensation, except that their actual and necessary expenses shall be paid; and that the said commissioners shall report their findings to the governor with recommendations for such legislative action as they may deem wise and necessary.*

*"That the governor of the state of Kansas transmit a copy of this resolution to the governors of the states of South Dakota, Iowa, Nebraska and Missouri, with the request that the legislatures of these states coöperate by appointing similar commissions."*

At a subsequent conference with the governor, in company with Professor Hoad, the governor appointed the following commission to represent Kansas, in conformity with the resolutions adopted, namely: Prof. Wm. C. Hoad, engineer State Board of Health; Prof. F. H. Billings of the department of bacteriology of the University of Kansas, and Dr. S. J. Crumrine, secretary of the State Board of Health, chairman. It is sincerely to be hoped that the other four states will act in like manner and appoint commissioners to unite with Kansas, by which during the coming two year a most exhaustive study and sanitary survey of the Missouri river may be accomplished for presentation to the legislatures two years from now.

The routine matters of the division of water and sewage that has occurred since the last meeting of the Board will be reported in detail by the engineer for your approval.

## HOTEL INSPECTION.

The 1911 inspection of hotels has not yet been called for, pending the result of the legislation in which it is proposed to turn this work over to the state labor commissioner.

There has occurred no reason to modify my observation made at the last meeting, in which it was set forth that the present system of hotel inspection by county health officers is more or less of a failure, being good in some counties, fair in others and indifferent or bad in still others. I have, however, the following recommendation to make, which recommendation was submitted to the grand grievance committee of the U. C. T. of Kansas and Oklahoma, who agreed to the proposition and expressed their belief that the order should be made—and that is that the public drinking cup should be abolished from all the hotels in Kansas.

Several months ago I was in a certain city in the northwestern part of the state, and a physician of that city, of high repute and of state-wide reputation, told me that he was then treating a case of syphilis, the inoculation of which took place through the so-called common drinking glass in a hotel in a neighboring city. He declared that there was scarcely a possibility of doubt that such was the case, and even thought he knew the probable source of infection, as he was at the time treating a traveling man for the disease, who then had a large number of mucous patches in his mouth. This physician was very emphatic in his request that the Board immediately take one more step in the right direction and abolish the common drinking cup in the hotels of Kansas, over which this department has sanitary jurisdiction under the law.

It might be well enough to take another step right here—although I am hardly prepared to make that recommendation at this time, as we have made no scientific investigation, as we have done in the cup—and that is the abolishment of the roller towel in the hotels of the state. I would, however, ask that the Board give the matter its serious consideration.

## FOODS AND DRUGS.

It was my privilege to attend the eleventh annual meeting of the state and national food and dairy commissioners at New Orleans, from November 28 to December 2. The meeting was a most instructive as well as a very agreeable one, as the entertainment was most lavish and the climatic conditions were exceedingly pleasant and favorable for midwinter to a northerner.

The real work of the convention, in a general way, is summarized in the following resolutions which were unanimously adopted:

*Resolutions Adopted by the Association of State and National Food and Dairy Departments.*

"At a meeting of the Association of State and National Food and Dairy Departments, held in New Orleans from November 28 to December 2, the following resolutions were unanimously adopted:

"*Resolved*, That we are gratified at the progress already made to secure uniformity in food and drug legislation, and urge that this association use its best efforts to bring about complete uniformity in all food and drug laws.

"**WHEREAS**, It is the belief of this association that the enforcement of the national food and drugs act of June 30, 1906, and the enforcement of the pure food laws of the various states, which laws are patterned thereafter, are seriously hampered by the absence of legal standards for foods: therefore, be it

"*Resolved*, That this association urges upon Congress the enactment of a law providing for the appointment by the President of the United States of a food standards commission, to be composed of food-law officials and chemists, state and national, connected with the enforcement of food laws, and representative manufacturers, producers and dealers in foods, which

commission snail fix food standards to be used in the enforcement of the food and drugs act.

*"Resolved,* That it is the judgment of this association that each state should enact suitable legislation to secure sanitary inspection of all places where food or drugs are prepared or sold or manufactured.

*"Resolved,* That this association favors the enactment by Congress and the various states of a weight and measure branding law, and that any such law be so framed as to make fair and reasonable allowance for the inevitable variations of weight and measure due to shrinkage, evaporation or other natural causes, and the unavoidable slight variations attendant upon the weighing or measuring of individual packages; and that the interests of consumers, manufacturers and dealers alike demand that weight and measure laws, like all food laws, should be uniform.

*"Resolved,* That experience has shown that efficiency in food-control officials increases with experience, and the people are entitled to have continuously, in connection with the enforcement of food-control laws, the services of trained, experienced, administrative and technical men; therefore, this association urges that the enforcement of food-control laws be divorced from politics.

*"WHEREAS,* There appears in many of the papers, journals and magazines of this country false and misleading statements concerning the therapeutic value of so-called patent or proprietary preparations, which are intended to and do deceive the public; therefore, be it

*"Resolved,* That this association deprecates such advertisements as being a menace to the public welfare and contrary to the spirit of the national food and drugs act."

#### ANTITOXIN DEPARTMENT.

Since the installation of the antitoxin division, which was established about a year ago, there has been distributed free to indigent persons in this state 146 packages of 1000 units, 162 packages of 3000 units, and 1999 packages of 5000 units.

It is gratifying to note that during the past two months there has been little use for the antitoxin, owing to the almost entire absence of the disease throughout the state.

Using as a basis for computation the generally accepted rates of mortality in diphtheria where diphtheria antitoxin has been used, as compared with the same number of cases where it has not been used, we arrive at the most gratifying conclusion that the free distribution of this serum by the State Board of Health has been instrumental in saving 102 lives during the past year. I am very sure that the members of the Board will join with me in the sentiment that this has been indeed worth while.

I believe that our experience in the distribution of diphtheritic antitoxin has been so successful, and has been so highly appreciated by both physicians and laymen, that the Board might, for the same reason for which they are distributing the free diphtheritic antitoxin, also arrange for the distribution of antitoxins, vaccines or serums of a number of the other malignant infectious diseases. I have been in correspondence with the H. K. Mulford company concerning terms for the antimeningitic serum, antirabic serum and for several of the bacterin, particularly typhoid bacterin. I would recommend to the Board that they authorize the secretary to make such arrangements and enter into such a contract as will permit this Department to furnish these various serums, vaccines or bacterins to the indigent poor of the state.

#### CONTAGIOUS AND INFECTIOUS DISEASES.

Early in December Doctor Alexander was requested to go to investigate an epidemic of smallpox, existing on the borders of Brown and Doniphan counties, that had been giving the local community considerable trouble. Early in the same month Doctor Carver was requested to

go to Toronto, in Wilson county, on a similar mission; in February Doctor Milligan kindly consented to go to Stafford county to investigate a widespread epidemic of scarlet fever, and Doctor Thompson, through his partner, Doctor Pine, made a similar investigation in Meade county. It is suggested that these doctors make their personal reports to the Board.

The educational campaign against tuberculosis continues, through our traveling exhibits and our lecturer, Dr. S. C. Emley, and I am pleased to report that the exhibit is everywhere received with great interest; many, and in fact most places, the evening lectures are given to crowds with standing room only. Up to the present time there have been in the neighborhood of 225,000 people, according to actual count, that have seen the exhibit and heard the lectures.

The federal government seems to be more or less concerned as to the possibility of Asiatic cholera regaining a foothold in this country. A large number of immigrants are coming from certain infected ports in Italy and from infected districts in Russia. With all the precautions exercised at these stations and at the ports of entry in this country, nevertheless some five or six cases have reached the port of New York. Inasmuch as this disease may be disseminated by carriers, similar to that of typhoid fever, the Public Health and Marine Hospital Service has taken the precaution to send out a warning to state boards of health, and are sending destination slips to the state health officers of all immigrants coming from infected ports; these slips, in turn, are sent to the county or city health officers at the point of destination, and an effort made to keep them under surveillance for a short time after their arrival in this country. Our laboratory has been furnished with agglutinating serum, in order to make a quick test of any suspected cases that may develop. The following circular letter was issued to the health officers under date of December 16:

*"To County and Municipal Health Officers:*

DEAR DOCTOR—I am inclosing herewith a pamphlet issued by the United States Public Health and Marine Hospital Service on "Cholera, Its Nature, Detection, and Prevention," which I trust may be of interest to you, as well as an aid in detecting any possible infection of cholera in your district.

"Reports are being received from the immigration officials of all immigrants from cholera-infected ports, destined to points in Kansas, and these are being sent out to the local health officers as soon as received.

"Very truly yours, S. J. CRUMBINE, M. D., *Secretary.*"

In October a communication from Dr. C. R. Carpenter, city physician of Leavenworth, was received, calling attention to the increasing prevalence of rabies in and about Leavenworth and asking the aid and assistance of the State Board of Health in issuing an order for the muzzling of dogs. I replied that there was no law upon the statute book giving this department such authority, but that I would write to the county boards of health of Leavenworth, Jefferson and Atchison counties, reciting the danger to persons and live stock in those respective counties, and to the fact that quite a number of persons have been bitten and a considerable number of live stock destroyed owing to the large number of rabid dogs and cats in those counties. Accordingly, the following letter was sent to the county board of health, as hereby indicated:

"OCTOBER 27, 1910.

*"Hon. Board of County Commissioners, Oskaloosa, Kan.:*

"GENTLEMEN—Evidence has come to this office that there have been a number of people in your county bitten by rabid dogs, and that a considerable amount of stock have been thus bitten, become infected and have perished owing to what seems to be a wide infection among the dogs of your county and adjacent counties.

"I most strongly urge that you immediately assemble yourselves in

extra session and pass a resolution reciting the above conditions, and then make an order providing that every dog in the county shall be muzzled for a period of ninety days from date, and order the sheriff and his deputies to shoot upon sight every dog not thus muzzled.

"This notice should be displayed in your official county paper in order that it may be made effective at the earliest possible date. Human life is too precious to hesitate or put off a matter of such great importance.

"While there is no specific statute concerning the muzzling of dogs, yet the local boards of health are charged by the laws of the state with the supervision of the health of the citizens of their respective counties, and it is my judgment that any reasonable order that your honorable board may make or method you may take to preserve the lives of your citizens and prevent the destruction of the domestic animals of your county will be upheld by any court in the land. There is absolutely only one way by which this epidemic may be controlled, and that is by the above method.

"I trust that I may have your assurance that this will be done.

"Very truly yours, S. J. CRUMBINE, M. D., *Secretary*."

A similar letter was written to the Johnson county board of health a little later.

#### DELINQUENT HEALTH OFFICERS.

The difficulty with the two delinquent health officers reported at the last meeting has been satisfactorily adjusted, one by the removal from office by the county board of health, and the other by compliance with the general health law and the regulations of this Board; hence the necessity for citing these officers before the Board for trial no longer exists.

Upon complaint of the president of the State Federation of Labor, an inspection was ordered of certain railroad camps, as to their sanitary condition and the food supply. The inspector, Mr. Floyd Tilford, submitted a report.

Respectfully submitted. S. J. CRUMBINE, M. D., *Secretary*.

## SECRETARY'S ANNUAL REPORT.

June 12, 1911.

MR. PRESIDENT AND GENTLEMEN—Another fiscal year is drawing to a close and, as is our custom, I take pleasure in submitting a condensed inventory of the year's work.

In a general way I think it can be said that the Board's policy of progress has been maintained, not only in the work of the divisions already inaugurated, but in the solution of new problems.

### EGGS.

Before summarizing the work for the year I desire to advise you of certain important matters that have occurred since the last quarterly meeting.

On April 19 a meeting of the egg shippers of the state was held at the Throop Hotel, together with representatives of this department, of the State Agricultural College and of the Bureau of Animal Industry of the United States Department of Agriculture. The meeting was held for the purpose of devising ways and means to improve the quality of the Kansas egg. After a thorough discussion it was agreed by all shippers present that on or before June 1, eggs should be sold only on the "loss-off" basis; that is, subject to candling.

Accordingly, notices, in the shape of a large poster were sent to every dealer in the state whose address we had, warning them against the sale of eggs that are unfit for food, and advising the dealer that on or before June 1 all eggs should be bought and sold subject to candling. The effort put forth in this direction a year ago was instrumental in greatly improving the value of the Kansas egg on the Eastern market, and I have no doubt but what the grade and quality of the Kansas egg during the coming year will be even better.

Too much praise can not be given to the Kansas Car-lot Shipper's Association for their hearty coöperation in the enforcement of the food and drugs law as it applies to the sale of eggs unfit for use.

Coincident with this campaign, it has been arranged that a representative of the Bureau of Animal Industry be allowed to speak to the audience assembled at our tuberculosis exhibit on the afternoon of one day in each town which we make. It is believed that much good can be accomplished along these lines of education in the proper care and marketing of eggs. This arrangement will probably be continued during the hot weather season.

### ANTIFLY CAMPAIGN.

In April of this year we published our usual annual fly BULLETIN, and put into effect the methods we have been using in past years in carrying on our antily campaign. Every letter that leaves our office contains a copy of the "Swat-the-Fly" leaflet. The fly poster, which has been revised, has been sent to every post office in the state, with the request that it be conspicuously displayed. Many encouraging reports from postmasters have been received, indicating the value of these posters in directing public attention to the dangers of the house fly. Our inspectors are requiring all places where foods and drugs are prepared or offered for sale to be effectively screened, and our traveling tuberculosis exhibit is showing to full houses our moving picture on the "Fly Pest."

In addition to these methods, we have succeeded in arousing an interest among the Boy Scouts in a great many cities of the state in the matter of city cleanliness, particularly as related to the breeding places of flies.

Weir City has the distinction of first starting the Boy Scout antily movement. These boys not only made a clean-up of all the trash and

garbage of the city, but made a sufficient number of fly-swatters to place two in every house in the city, and succeeded in having the Commercial Club finance the project of making a large number of flytraps, which were placed about the streets. They then appeared before the mayor and council with a view to securing the passage of the antily ordinance, which the department published in the *BULLETIN* a year ago. It certainly must have been a sight worth seeing, if one had been there to hear these juvenile patriots reading the essays, which they had with much care and labor prepared, in argument for the necessity of the passage of the ordinance. You may be assured that their enthusiasm was rewarded, and the boys have pledged themselves to see that the ordinance is literally enforced. The ordinance provides for the removal of manure heaps within certain specified times, and also provides that all outside toilets shall be made fly proof.

This movement has extended to a great many cities, and in order that it might be properly directed your secretary secured the assistance of the Rev. Walter Burr, of Olathe, who has had a large experience in the Scout movement. Reverend Burr has been untiring in his labor and enthusiasm, and has secured the clean-up of quite a number of Kansas towns through the Boy Scout organization, and has been the means of distributing thousands of our leaflets and other fly literature.

I succeeded in getting the fly-fighting committee of the American Civic Association interested in the Kansas campaign, and to that end prizes were offered in the three largest cities of the state for the best essays, written by pupils in the grammar grades, on the subject, "The House Fly as a Carrier of Disease," and was the means for distributing a considerable quantity of fly literature. It might be of interest to add that Edward Hatch, jr., chairman of the executive committee of the association, is beginning to have the Kansas idea of the Boy Scout movement taken up all over the country.

#### COMMITTEE ON COÖPERATION.

The last meeting of the Association of State and National Food and Dairy Departments, held at New Orleans, passed a resolution for the creation of a committee on coöperation with the federal government in the enforcement of the national and state food and drugs law. Your secretary was honored by being named chairman for this committee, and upon the invitation of Secretary Wilson of the Department of Agriculture the committee met in Washington on Tuesday, May 23, continuing in session the remainder of the week. The deliberations of the committee resulted in the adoption of the following resolutions:

1. "WHEREAS, Experience has demonstrated that close and cordial coöperation between the federal food and drug inspection branch laboratories, and the collaborating officials in the states where such laboratories are located, has resulted in inestimable benefit to both the laboratories and the collaborating state officials:

"We therefore recommend that those cordial relations be continued to the fullest extent in all such cases, and that the closest and most cordial collaboration be maintained, not only in the analytical departments, but among the inspection force as well.

2. "We recommend that the Secretary of Agriculture be requested to cause instructions to be issued to all food and drug inspectors operating under the national food and drugs act to the effect that whenever violations of the state food and drugs acts come under their observation they shall report the same to the commissioner or collaborating state official in that state.

"It is further recommended that all collaborating state officials in the several states be requested to transmit immediately to the Secretary of Agriculture information as to violations of the national law or information which may lead to the discovery of such violations, where such of-

ficial may for any reason be unable to handle such case satisfactorily or expeditiously.

3. "WHEREAS, Regulation 4 of circular No. 21 prescribes that: 'Unless otherwise directed by the Secretary of Agriculture, the methods of analysis employed shall be those prescribed by the association of official agricultural chemists and the United State Pharmacopœia,' your committee on cooperation requests that all collaborating chemists be supplied by the Secretary of Agriculture with the methods of analysis employed in the Bureau of Chemistry in the examination of foods and drugs, where methods have received the approval of the Secretary of Agriculture and are not those methods prescribed by the A. O. A. C. and the United States Pharmacopœia.

"We recommend that the Secretary of Agriculture be requested to send out to all collaborating officials such confidential information concerning matters of general interest affecting the enforcement of the national food and drugs act as may be of assistance to the collaborating officials in the performance of their duties.

"It is further recommended that the collaborating officials be requested to send to the Secretary of Agriculture, and to other collaborators in the several states, all new information of value and general interest pertaining to their official work and investigations.

4. "We recommend that the Secretary of Agriculture invite the various collaborating state officials to correspond with his department in all matters requiring information or advice, and urge upon them the desirability of interchanging ideas and information upon all matters pertaining to the enforcement of the national food and drugs act.

5. "We recommend that, where perishable food or drug products have entered into interstate commerce and are found or believed to be unfit for food or drug purposes, and there is a reasonable doubt as to the conditions of such product at the time of shipment or manufacture, full information concerning the case be referred to the state official in whose state the shipment originated as soon as the first steps looking to the condemnation of such product have been taken. This state official should immediately investigate the source of such product and the sanitary conditions under which it is manufactured or produced and immediately submit all information obtained in said investigation to the state or federal official referring the case.

6. "It is suggested by this committee that if any collaborating state official can place his inspection force at the service of the Secretary of Agriculture to aid in the enforcement of the national food and drugs act, this service be proffered for such use as the occasion may demand.

7. "WHEREAS, Many of the states which have efficient food laws and food control do not have laws preventing adulteration of drugs or controlling the great evil of drug substitution:

"Therefore, we recommend that this association pledge to the food commissioners in states which do not have efficient drug laws its support and assistance in their efforts to secure proper drug legislation;

"AND WHEREAS, We believe that concerted action will advance drug control throughout the country and render the sale of fraudulent and fake medicinal preparations increasingly difficult, if not impossible; we

"Recommend further that commissioners be urged to prepare circulars of confidential information concerning illegal drugs and medicinal preparations and send them to other state drug-control officials and to the federal authorities.

8. "WHEREAS, The collaboration of federal and state chemists has resulted to the mutual advantage of all concerned by bringing about greater efficiency, together with uniformity of methods; and

"WHEREAS, Since the bacteriological and microscopical examination

of food and drugs is coming to be of increasingly great importance in the detection of certain forms of adulteration and decomposition:

*"We therefore recommend collaboration between state and federal bacteriologists and microscopists as being desirable for the same reasons that have made such collaboration of chemists both desirable and necessary."*

9. "WHEREAS, In consideration of the vital importance and necessity for coöperation between the national and state food and drug control officials as herein set forth:

*"We unanimously recommend to this association that a permanent standing committee on coöperation be appointed by the president of the association, such committee to consist of five members, and its duties to be to endeavor to secure coöperation in the enforcement of the national food and drugs act and the food and drugs acts of the several states, to aid in advancing coöperation between the federal and state food and drug control officials, and to promote coöperation among the state officials of the several states."*

*"It is further recommended that the terms of office of the members of said committee be respectively one, two, three, four and five years; that subsequently the term of office of each shall be for five years, and that the president of this association shall fill any vacancy in said committee, caused by death, resignation or otherwise, for the unexpired term."*

*"It is further recommended that the Secretary of Agriculture be requested to appoint one or more persons connected with the United States Department of Agriculture to meet and act with said committee on coöperation at all its meetings, and to represent the said department in the deliberations of said committee."*

*"It is further recommended that said committee be required to report at the annual meeting of this association the results of its efforts to accomplish such coöperation, and that said committee be empowered to take such steps as seem desirable in promoting such coöperation."*

10. "WHEREAS, The meeting on coöperation held in May, 1911, in Washington, D. C., would have been impossible except for the courtesies and aid extended to the committee by the Secretary of Agriculture, in placing at its disposal all facilities necessary for carrying on its work;

*"We recommend that the secretary of this association be authorized to express to him and to his able representative, Dr. F. L. Dunlap, the thanks of this association for the many courtesies extended to your committee on this occasion."*

*"Complete and full instructions have been sent to the collaborating officials in connection with their duties in the administration of the national food law. It has appeared, however, that certain of the directions as sent have not been sufficiently explanatory, and in order to make these points clearer to the collaborating officials it has seemed to the committee desirable to discuss more fully some of these steps. The committee wishes to express its thanks to Mr. W. P. Jones, of the Solicitor's Office of the U. S. Department of Agriculture, for the aid he has furnished them in working out the details of the explanations which follow in connection with this phase of the coöperative work."*

*"The collaborators are referred to the Manual of Instruction issued by the Department of Agriculture, wherein general information on this subject is given."*

*"Three things are necessary to successful prosecution of a case under section 2 of the federal law:*

*"First. The sample must have been shipped in interstate commerce."*

*"Second. The sample must be received by the analyst in the identical condition in which it was shipped from another state. (Sample must be an 'unbroken package.')*

"*Third.* The sample must have been adulterated or misbranded at the time it was shipped from another state.

"The gist of the offense is the shipment; that is, in general, the delivery within a state of an article of food or drug to a carrier for transportation into another state. The contents of the sample must be in the exact condition in which they were shipped, in order that the analyst or examiner may be able to testify to the composition of the article at the time it was shipped.

"The regulations adopted by the three secretaries wisely provide that only those state officials holding commissions from the Secretary of Agriculture, and their agents, shall collect samples on which to base prosecutions under the law. The commissions issued by the Secretary must be carefully preserved, so that they may be produced, if necessary, to show that samples were regularly collected. The commissioned state officials should issue similar commissions to their agents, which must likewise be preserved. What products shall be samples rests in the discretion of the commissioned state officials, subject to such requests as the Secretary of Agriculture may make from time to time. The commissioned state official shall instruct his agents what samples to collect, and only those samples can be used which are collected by agents within the authority conferred on them by the commissioned state official.

"A commissioned state official, or his agent, when collecting a sample within his state which has been received from another state, territory or the District of Columbia, should keep in mind and use the forms provided by the Secretary of Agriculture. For example, if Mr. Woods or his agent finds in the state of Maine adulterated foods shipped into the state from Illinois, he should procure a sample and take a receipt therefor on the Department of Agriculture form (Dealer's Receipt). At least three packages should be procured, when practicable, and in bulk goods enough to subdivide into three parts. He should obtain from the dealer records (invoices, etc.), showing the sale of the shipment of which the sample is a part, and transportation records (way bills, freight receipts, etc.), covering the transportation of the shipment from Illinois to Maine. The dealer's receipt should be signed by a person who can identify the sample with the records of sale and transportation, and who can testify that the sample delivered to the inspector was in the same condition as when received by the dealer. The records of sale and transportation may be originals or copies. Originals are preferable, but all records obtained should be initialed by the dealer, so that he may identify them later. The samples should be sealed and marked by the collector, using D. of A. seals and marks. He should also prepare a report of collection, using Department of Agriculture Inspector's Description of Sample Book, and Inspector's Report of Collection.

"The reports should be delivered to Mr. Woods with all the samples except one, which should be turned over to Mr. Bartlett, the chemist in Maine appointed by the Secretary of Agriculture as collaborating chemist in the Bureau of Chemistry. Mr. Bartlett should examine the sample promptly and report the results to Mr. Woods, using the Department of Agriculture Analytical Sheet and Chemist's Report. Mr. Woods should keep a record of the sample on Department of Agriculture Sample Index Card. If, in his opinion, Bartlett's report shows the sample to be adulterated or misbranded, Woods should send to Jones in Illinois reports of the inspector and analyst, one of the samples, and ask him to cite shipper for hearing. Woods should notify the Secretary of Agriculture of his action. Jones should cite the shipper for hearing at once, fixing a reasonable time, and, if requested, should turn the sample over to the shipper. Under Regulation 6, hearings are private and confined to questions of fact. The Department of Agriculture form, Appointment for Hearing, should be used and sent by registered mail. The return receipt card should be filed in the records of the case, to show delivery of the notice. Everything which transpires at the hearing should be taken down by a stenographer and a transcript made. If it is impracticable to furnish

a verbatim report of the hearing the commissioned state official should dictate a summary of the hearing and have it transcribed immediately after the close of the hearing. The hearing should be conducted in accordance with Regulation 5. For further information with respect to hearings the commissioned state official should consult Department of Agriculture Manual of Instructions, page 46. After the hearing Jones should send all the records received from Woods to the Secretary of Agriculture, together with the reports of the hearing. If it develops, however, that the shipper holds a guarantee under section 9 of the law, and the guarantor resides in Illinois, Jones should cite the guarantor for hearing also before him, and report both hearings to the Secretary of Agriculture. Jones should notify Woods when the hearings have been held, and also when he has referred the case to the Secretary of Agriculture.

"On receipt of the records by the Secretary of Agriculture they will be summarized by the Bureau of Chemistry and sent to the solicitor for recommendation whether prosecution shall be had. Woods and Jones will be notified of the Secretary's decision. If the case is sent to the Attorney-general for prosecution, Woods will be called on for a sample to be examined by the collaborating chemist in Illinois, to check Bartlett's results, and also to make available to the United States attorney in Illinois, where the case must be tried, an analyst with whom he may confer in the preparation of the case. The results of the check analysis will be reported by Jones to Woods and the Secretary of Agriculture. Both Woods and Jones should notify the Secretary of Agriculture of any pertinent facts in the case which may come to their notice at any time prior to its termination in court.

"Suppose, on the other hand, that Mr. Jones finds the manufacturers or jobbers in Illinois are shipping adulterated or misbranded foods and drugs into the state of Maine in violation of the federal laws. He should instruct his inspectors to obtain information, through the transportation companies, of the date of shipment and the names of consignees, and make a report to Mr. Woods, giving him the details with regard to the shipment, together with his reasons for believing that the articles shipped are adulterated or misbranded. With this report before him, Mr. Woods will be enabled to make a prompt collection of a sample, have it examined, and proceed to prepare a case for prosecution against the shippers, as above outlined.

"Or if in his opinion the circumstances warrant such action, Mr. Woods may ask the United States attorney for the district of Maine to make a seizure of the shipment. Prompt action is necessary to effect seizures of foods and drugs. Adulterated and misbranded foods are liable to seizure under the law as long as they remain in the original unbroken packages; that is to say, generally speaking, packages in which they are shipped in interstate commerce. Under a recent decision of the supreme court, it is immaterial whether adulterated or misbranded goods have been transferred out of the possession of the original consignee within the state. Proof is necessary, however, to show that the goods either are in the course of transportation from one state to another or have been transported from one state to another. In presenting proposed seizures to the United States attorney, Mr. Woods, therefore, should furnish him with evidence in the form of freight bills, waybills, express receipts, invoice, etc., when they are available, showing that the particular lot of goods have been transported in interstate commerce. If inspectors themselves witness the interstate transportation of goods, a statement to the effect to the United States attorney will take the place of records of interstate transportation. If Mr. Jones has furnished Mr. Woods with an analysis of a sample taken from the shipment, or from other shipments of the same goods made on or about the same time, and this analysis shows that the goods are adulterated and misbranded, the United States attorney may be asked to seize the goods on the strength

of this analysis. It is preferable, however, if there is time, that a sample should be obtained from the shipment after its arrival in the state of Maine, and there analyzed. The reason for this is, that to obtain a decree of condemnation or forfeiture it is necessary to show that goods are adulterated or misbranded at the time seizure is made. In the case of perishable goods, it is necessary that an examination should be made of samples on their arrival within the state, and it may very well happen that goods which were not adulterated at the time they left the state of Illinois may be adulterated when they arrive within the state of Maine. It is possible, also, that goods shipped from Illinois may be relabeled or branded after their arrival in the state of Maine, so that, although misbranded at the time of shipment, they may not be misbranded in the hands of the consignee. Mr. Woods should advise the Secretary of Agriculture and Mr. Jones promptly of any action he may take with respect to asking United States attorneys to make seizures of adulterated foods shipped from Illinois. The report should be in detail, showing the facts of interstate transportation, the analytical results, particulars in which the goods are alleged to be adulterated and misbranded, and the action taken by the United States attorney. If the United States attorney accepts his recommendation, Mr. Woods should obtain and send to the Secretary of Agriculture a copy of the libel filed, and should keep him advised of the progress of the suit. Mr. Woods should ask the United States attorney for permission to take samples from the seized goods for analysis; a sufficient number of samples should be procured to be representative of the shipment. These samples should be sealed, marked, and analyzed as soon as possible after they are obtained. Mr. Woods should advise the Secretary of Agriculture of the number of samples obtained and whether he desires to have any of the samples examined by chemists outside the state of Maine. In contested cases it is frequently important to have examinations of samples made by different analysts, and it will generally be found expedient to have the analysis made by the collaborating chemist in Maine, supplemented by analysis made either by the Bureau of Chemistry or by collaborating chemists in other states."

If the plans and work herein outlined shall be adopted by the National Association at their next meeting and formally approved by the government, which we have the assurance they will be, it would be, in my judgment, the most important movement in food and drug control that has ever been inaugurated. Hitherto there has been a lack of harmony and coöperation between the states and the government, and between the several states themselves. This plan would harmonize and strengthen the hands of every food commissioner as well as that of the federal government in the enforcement of both the state and national laws.

#### INSPECTION OF PRIVATE SCHOOLS.

Agreeable to the sentiment expressed in the former meeting, that there was just as good and perhaps greater need for the inspection of the private as for the state educational institutions, the president, at the suggestion of the secretary, appointed certain members of the Board, living closest to the schools designated, as a committee to visit and inspect such institution. The assignments as made were as follows:

#### COMMITTEES.

##### *Sanitary Inspection of Private and Denominational Schools.*

*Atchison:* St. Benedict's College, Midland College—Doctor Alexander and Professor Bailey.

*Baldwin:* Baker University—Doctors Coburn and Jarret.

*Concordia:* College of the Sisters of Bethany—Doctor Eddy.

*Emporia:* College of Emporia—Doctor Magee and Professor Hoad.

**Eureka Lake:** Odd Fellow's Home—Doctor Crumbine and Professor Hoad.

**Hiawatha:** Baptist College—Doctor Alexander.

**Highland:** Highland University—Doctor Alexander.

**Holton:** Campbell College—Doctor Reynolds.

**Leavenworth:** Sacred Heart—Doctor Coburn.

**Lindsborg:** Bethany College—Doctors Walker and Eddy.

**Newton:** Bethel College—Doctor Thompson.

**Oswego:** Missouri Valley College—Doctor Aldrich.

**Ottawa:** Ottawa University—Doctors Jarret and Coburn.

**Sterling:** Cooper College—Doctor Thompson.

**St. Marys:** St. Marys College—Doctor Alexander and Professor Bailey.

**Topeka:** Washburn—Doctor Crumbine and Professor Hoad. College of the Sisters of Bethany, Assumption School, St. Joseph's School, Boys' Industrial School—Doctors Lerrigo and Magee.

**Wichita:** Mt. Carmel Academy, Fairmount College, Friends College, Masonic Home—Doctor Crumbine and Professor Hoad.

**Winfield:** Southwestern College, St. John's College—Doctor Aldrich.

It is suggested that copies of these reports should be sent to the head of the institutions inspected, and in case of grave insanitary conditions existing that would seem to be a menace to the health of the students, that the Board should issue an order requiring such changes to be made as would seem to be necessary to remove such a menace.

#### HOTELS.

As indicated in a former report, the work in the inspection of hotels by county health officers has in many instances proven entirely ineffective in the enforcement of the law. It was thought best, therefore, to temporarily withdraw our food and drug inspectors from their usual work, in order that they might visit the counties in which the inspection of hotels had not been made or in which the law had been ineffectively enforced; accordingly, the following circular letter was issued to inspectors:

*Circular Letter No. 42.*

MAY 17, 1911.

*"To Food and Drug Inspectors:*

"Beginning the week of Monday, May 22, inspectors will devote their time, until further notice, to hotel and restaurant inspection. Beginning in the town in each county where is located the county health officer, get him and the local fire marshal to accompany you if possible, and then clean up the hotels and restaurants in that county. Where you find flagrant violations of the law, complaint should be filed with the county attorney. Orders left for clean-ups, changes or repairs should be certified back, upon compliance, to you by one of these officials or the town marshal.

"Where you are delayed in a town longer than it takes for hotel inspection, you should, of course, take up your regular inspection work, preference being given to meat markets, bakeries and flour mills, in the order named.

"Accompanying this letter is a list of counties assigned to you for this special work. Move fast, as we can not spend too much time on this work. Very truly yours. S. J. CRUMBINE, M. D., *Secretary.*

"P. S.—Certificates will not be issued on this special inspection by inspectors, unless accompanied by the order of the County Health Officer, who will make out report in the usual manner on the blanks furnished by this department."

This inspection has revealed the wisdom of detailing inspectors on this work, and has strengthened my former belief that the department should

have at least two high-class men whose entire time should be devoted to hotel inspection, and that work be taken out of the hands of the county health officers.

#### GENERAL.

##### *Food and Drugs Law.*

The work under the division of food and drugs for the past year has been carried on in the same vigorous fashion that has characterized that division of the work since its inception, having always in mind fairness and a square deal to all parties concerned.

Inspectors are endeavoring to enforce in a special manner the sanitary provisions of the law. There is no reason why cleanliness should not prevail in every Kansas establishment. It is to be expected, therefore, that a goodly number of the prosecutions which have been brought during the past year have been for violating the sanitary provisions of the law.

Of the prosecutions that have been brought since the publication of the last biennial report, which now covers a period of two years, there have been 85 for the adulteration of drugs; 139 for the adulteration of foods, and 71 for insanitary conditions where foods were produced or offered for sale. Two cases have been successfully brought for obstructing inspection.

Speaking generally, it is my belief that the conditions of the food and drug establishments are in most instances highly satisfactory. Of course, there are constantly recurring problems and much work to be accomplished yet in food and drug control, particularly the latter.

In this connection I desire to speak of one remaining evil that is so often practiced by druggists—that of substitution. In order that some educational work should be done along that line, I asked Professor Sayre, the drug analyst for the department, to lay the matter before the annual meeting of the State Pharmaceutical Association, which he kindly consented to do by submitting the following message, which I trust will meet with your approval:

"The druggists of the state are to be congratulated in that the standard for drugs and medicinal preparations is receiving more attention. Improvement in official preparations is more or less marked, and it is the hope of the department that every druggist in the state of Kansas will have on his dispensing shelves preparations which will uniformly respond to the official test. Perhaps many of you will recall that in a recent BULLETIN the following statement was made: 'We will match the drug and grocery stores of this state with any other state in the Union, in the same size town, as to sanitary conditions and quality of stock.' (November, 1910.)

"The State Board of Health is not only heartily in sympathy with every effort of the pharmacists to improve the standard and quality of drugs and pharmaceuticals, but from the above quotation in the BULLETIN it would seem that it is jealous of the standing of the Kansas pharmacists, and is proud of the progress that has been made in recent years in dissipating the odium which to a greater or less degree was associated with the name of the Kansas druggists.

"With this feeling, then, as a basis, it is the department's desire to bring before the attention of the pharmacists of the state one of the remaining evils—that of substitution. This is no new evil, or one that is practiced by the disreputable pharmacist alone, but, strangely enough, many of our best, most cultured and intelligent pharmacists have been taken up into the mount of "Just as Good," have been shown the kingdoms of profit in the valleys below, and have been swept away from the sane moorings of reputable pharmacy in the vicious practice of substitution.

"It is in a spirit of frankness and fairness, entirely devoid of animosity or ill will, that I want to announce that on and after this date evidence against any pharmacists that has been substituting in any particular,

especially in that of prescriptions, will be the grounds for a criminal prosecution in the courts. The day of the 'substituter' is past in Kansas.

"The responsibility rests upon the department to see to the enforcement of the law, and one of the specific things forbidden by the Kansas food and drugs law is that of substitution. We submit, therefore, in all fairness, whether or not the pharmacists of Kansas expect the Board of Health to waive or set aside the plain provision of the law which they are charged to enforce.

"The members of the pharmaceutical profession, as loyal citizens of the state, it is presumed will do all they can to support the state laws and hold up the hands of those into whose hands the responsibility of the administration of the law is placed, and the State Board of Health asks for your hearty coöperation in this matter."

I am advised that the association took active and advanced ground in the question of substitution, and I am glad to know that they have unequivocally denounced the practice and have indicated their willingness to assist the department in the enforcement of the law.

#### *Standardization of Disinfectants.*

There are a great many so-called disinfectants upon the market that make extravagant claims as to their potency. It is my belief that the division of foods and drugs should require the standardization of all disinfectants sold in the state, and that the labels on such preparations as claim to be disinfectants should make a definite statement as to the carbolic acid efficiency. The necessity for this must appeal to the members of the Board without argument, and I therefore recommend that the Committee on Food and Drug Standards be directed to investigate the matter fully and recommend to the Board some action, together with suggested standards, to report at the next quarterly meeting.

#### *Weights and Measures Law.*

Since the passage of the weights and measures law sixty-eight prosecutions have been successfully brought for the violation of the same. Thousands of weights and scales have been inspected and a great many condemnations made. One of the surprises of the work has been the large percentage of both weights and scales, including both avoirdupois and apothecaries', that were found to be beyond the limit of tolerance permitted under the law and the rules and regulations promulgated by the state sealer of weights and measures. For illustration, it has been found that about 35 per cent of the apothecaries' weights that have thus far been inspected have been condemned, and about 80 per cent of the old-fashioned iron avoirdupois weights have been found inaccurate, usually short of weight by reason of rust and in having the edges chipped. As indicated in a previous report, about 35 per cent of the large wagon scales were beyond the limit of tolerance.

In all fairness, it should be said that in most instances the error in the weights and scales were unknown by the dealer, as hitherto he has had no way of knowing as to whether or not they were correct. In a small number of instances there was clear evidence of intention to defraud, and in all such cases prosecutions were filed against the offenders.

#### *Division of Water and Sewage.*

The work under the division of water and sewage has grown to such an extent, as requested in a former meeting that an assistant engineer had to be secured. The engineer of the Board, Professor Hoad, will submit his annual report covering in detail his work in that division. The Secretary will be content, therefore, in simply saying that two of the most important tasks the State Board of Health has ever undertaken will come up for solution during the coming year, which have direct bearing upon the physical welfare of a large number of our citizens. I refer to the towns lying in the drainage areas of the Cottonwood and Neosho and Virdigris rivers, and the cities situated on the

Missouri river, all of which are being used as a source of domestic water supply for the cities situated thereon.

The domestic supply of almost every city in the state has been analyzed as to its wholesomeness and purity by the chemist of the State Water Survey, and suggestions for the betterment of the same have been made, and in many instances put into operation.

The value of the water and sewage work in relation to the life and health of the people of Kansas can not be overestimated.

#### *Hotel Inspection.*

Some 1200 of the approximately 1700 hotels have been inspected twice. About 1000 have been granted certificates, 80 have been closed because of insanitary, filthy conditions, or failure to comply with the law, and the balance are pending while undergoing repairs or arranging for compliance for the second inspection.

#### *Vital Statistics Law.*

For some time after the legislature adjourned it was thought impossible to put into operation the vital-statistics law, because of lack of funds appropriated for that purpose. The whole question was laid before the governor and the state auditor, and their permission finally secured to permit us to use the emergency fund for one of the clerks and the tuberculosis fund for another. After the salary of the state registrar is taken out of the amount specifically appropriated by the Legislature, it would leave \$700 for miscellaneous expenses, not enough to provide another clerk. It has therefore been arranged with the city clerks of the cities of the first class to provide a third clerk in the department, by turning back so much of the fees as are necessary for that purpose. This arrangement is done with the knowledge and consent of the governor and state auditor and with the consent of all the city clerks thus far interviewed. I trust that this arrangement for the use of the funds above mentioned and the arrangement with the city clerks will meet with your approval.

It is believed that the importance of the law as a sanitary measure and the value of the records from a legal and scientific standpoint are so great that the extraordinary methods herein adopted to make the law immediately effective are warranted.

The election of the state registrar and the adoption of the rules and regulations under the law will come before you under the head of new business.

#### *Tuberculosis Exhibit.*

Two years' work of our traveling tuberculosis exhibit is almost ended, and it is a source of great pleasure and gratification that the work has been most successful, and I believe the means of accomplishing great good in the dissemination of accurate and scientific information concerning the cause and prevention of this great scourge of humanity—tuberculosis.

Since the addition of the two moving-picture films, "The Fly Pest" and the dirty-milk story, "The Man Who Learned," Doctor Emley, the lecturer in charge, reports that there has been difficulty in securing halls large enough to take care of the crowds.

There have been, up to the present year, approximately one-quarter million of people who have seen the exhibit and heard the lectures. The exhibit has visited every county in the state at one or more places. Special effort has been made to secure the attendance of the students and teachers of the public schools, which effort has been generally successful, for the final solution of the control of most of our infectious diseases, particularly that of tuberculosis, must depend largely, if not chiefly, upon the dissemination of accurate information among the people, particularly the on-coming generations.

That board of health whose chief function is to attempt the control of epidemic diseases through quarantine and disinfection, whose office force

is chiefly engaged in the tabulation of vital statistics, and whose publications are cluttered with wearisome tables of the same, has yet to learn its true mission—that of education of the people in personal and public hygiene, which is the fundamental basis of successful preventive medicine as it relates to public health work.

Strangely enough, the dissemination of knowledge among the people in matters of personal and public hygiene has not kept pace with the general increase in and dissemination of knowledge along other lines; so that it is not at all uncommon to find highly educated people holding the most absurd and grotesque views on subjects concerning their own bodies, of the cause and prevention of disease, or the common principles underlying private and public sanitation.

Modern public health work must, therefore, concern itself with methods and plans whereby the people as a whole may be instructed, to the end that the work of boards of health in the suppression of preventable diseases may receive intelligent and systematic coöperation, and that cities and communities may not hesitate or delay to carry out such plans or public works as may prevent disease and which may be for the promotion of the general comfort and public welfare.

I regret to announce that Doctor Emley believes that he can not, in justice to himself and family, continue the work another year, as the legislature has provided for its continuance. I would, therefore, ask for an order from the Board to secure another lecturer, upon such terms as can be made to get a first-class man. It is my belief that the work of the exhibit was chiefly instrumental in securing from the legislature an appropriation for a State Tuberculosis Sanatorium.

#### *Tuberculosis Notification Law.*

It is a matter of regret and considerable concern that the provisions of the tuberculosis notification law have not yet been fully observed by the physicians of the state. It is thought that after the vital statistics law becomes fully operative we will be in a better position to discover what physicians are failing to comply with the law, through the death reports on tuberculosis that are filed through the department monthly. At all events, I believe that after two years time we should insist, through the courts if necessary, that this most beneficial law be literally enforced.

#### INFECTIOUS DISEASES.

##### *Anterior Poliomyelitis.*

The past year has been exceptionally free from grave epidemics of the infectious diseases, with the single exception of an epidemic of anterior poliomyelitis, which is the second year that this malignant infection has visited our state. Altogether there were 189 cases, affecting 47 counties, between the 1st of July and the 1st of December, 1910.

There have been two cases reported this year—one from Saline county and one from Riley county. It is certainly to be hoped that we will not have a repetition of the epidemic this year.

A study of the cases occurring in last year's epidemic is being made, and the results of the same will be published in a future issue of the BULLETIN.

Experiments with monkeys at the Rosedale Hospital will be continued this year if the opportunity is presented. It is also desired that a number of cases in the acute stage be taken to the hospital for study; and it is desired that the fullest facilities in the matter of study be given to those in charge, with the hope that our limited knowledge concerning the dissemination of the disease and its treatment may be greatly extended.

##### *Rabies.*

It is a serious fact that rabies in Kansas is rapidly on the increase. There has been scarcely a week for the past year but what from one to a half-dozen cases of bite of some person or persons by a supposedly mad-dog has been reported to the department. In addition to this, thousands

of dollars' worth of valuable live stock have been thus infected and destroyed. It is my belief that the time has come for the inauguration of a state-wide muzzling order for dogs, lasting for a period of at least sixty days. And it is, therefore, recommended that the Board petition the state sanitary live-stock commissioner to issue such an order. Under the law, it seems that the commissioner has the authority for such action, if in his judgment the disease becomes or threatens to become prevalent.

In accordance with instructions of the Board at its last quarterly meeting, arrangements have been made to provide the Pasteur treatment, as secured from the Public Health and Marine Hospital Service, for such of the state's indigent as can be properly treated at the State University Medical School.

In this connection I would also add that we have laid in a stock of antimenigitis serum, tetanus antitoxin, and typhoid and scarlet fever bacterins, information of which was published in the May BULLETIN. The physicians of the state have shown their appreciation of this work by already placing their orders for a number of doses of the various serums, antitoxins and bacterins mentioned.

It is of special interest to note that the antimenigitis serum seemed to have been instrumental in the recovery of a case of epidemic cerebrospinal meningitis, as the first case that came down in the family was fatal, the second case being in the condition in which it seemed to the attending physician to be almost hopeless; yet two injections of the Flexner serum resulted in prompt recovery of the case.

#### *Railroad Camps.*

Occasional complaints come to this department from various sources concerning the sanitary conditions of railroad and construction camps. Some time ago a painstaking investigation was made of a large camp at Erie, Kan., and a report made to the Board. In this case they were serving meals to the railroad employees as a part of their compensation, and therefore the quality and method of serving such food supplies clearly came within the provisions of the food and drug law. In the matter of railroad camps that are not thus being supplied with food as a part of the compensation, I am somewhat in doubt as to the Board's authority in the matter. It is recommended that the matter be discussed by the Board, and the secretary instructed as to what, if any, procedure in the way of investigation and bringing about better conditions in these camps can be done within the limits of our authority.

#### *Summer School for Physicians and Health Officers.*

This evening the chancellor opens in a formal way the first summer school for physicians and health officers ever held in Kansas. It seems to me that this marks an epoch, not only in the University Medical School, but in the sanitary organization of the state, in an effort to bring about a coordination and cooperation between the University Medical School and public health work of the state, and, incidentally, bring this great institution in vital and practical touch and usefulness with the physicians of the commonwealth.

On May 13 the following letter was sent to health officers:

*"To County and Municipal Health Officers:*

"MAY 13, 1911.

"The first annual summer school for health officers and physicians will be held at the University at Lawrence, under the joint auspices of the State Board of Health and Medical Department of the University, for one week beginning Monday, June 12. For detailed announcement and program see the May BULLETIN.

"Every health officer of the state is urged to be present, and the hope is entertained that nothing short of sickness in your immediate family will prevent your coming.

"It is suggested that the matter be laid before your board of health and that your expenses be allowed for this trip, yet your failure in this

particular should not permit you to deny yourself this brief time which will be spent with such pleasure and profit.

"In addition to the school work, the business of the State Association of Health Officers will be taken up, in which matters of mutual interest and importance will be discussed.

"Doctor, you owe it to yourself to take this little vacation, and you owe it to this department to assist us in making our first annual school for health officers an unqualified success.

"I would be glad if you would advise me between this time and the first of June if you expect to attend.

Fraternally yours,

S. J. CRUMBINE, *Secretary.*"

To-day marks the advent of three new members of the Board and three new conferees of the advisory board, and I am sure I am expressing the sentiments of the Board when I extend to these new members a most cordial welcome to join with us in carrying forward the work of the State Department of Health. I am sure that our relations will continue to be in the future, as they have in the past, both harmonious and interesting and mutually helpful, always keeping to the fore those altruistic principles which have been the guiding star of the true members of our profession, namely, the greatest good to and our best efforts in the promotion of the public welfare.

At the last annual meeting of the National Food and Dairy Departments, a resolution was adopted favoring the creation of a standards committee under the national law, which would be composed of state and federal food officials, state and federal chemists, and representatives of the great commercial interests. While this resolution has not yet become effective under the federal government, and indeed can not until Congress passes the necessary legislation to make it effective, yet Kansas, with her usual spirit of progressiveness, has put into practical effect the provisions of this resolution, and has the distinction of being the first state to appoint representatives of the commercial interests as conferees upon her advisory board; is it any wonder that at the recent conference held at Washington, every new question coming up for discussion was prefaced by the question, What is Kansas doing in that respect? I am sure that the counsel and advice of these gentlemen will be very helpful in the enforcement of the food and drugs act.

MINUTES OF THE ANNUAL MEETING OF THE  
STATE BOARD OF HEALTH.

HELD IN TOPEKA ON JUNE 12, 1911.

The State Board of Health met in annual session in the office of the secretary at Topeka, on Monday, June 12, at one o'clock P. M.

Upon roll call all members of the Board were present except Dr. J. W. Jarrett; of the advisory board Dr. Greenfield and Mr. Deacon were present, and of the conferees, Mr. Kimball.

The first order of business was the election of officers for the ensuing year, which resulted as follows: President, Dr. B. J. Alexander, of Hiawatha, Kan.; Vice President, Mr. C. B. Welch, attorney of Coffeyville, Kan.

Upon motion the advisory board and the conferees were unanimously reelected, as follows: Dean F. O. Marvin of Lawrence, Prof. William C. Hoad of Lawrence, Prof. E. H. S. Bailey of Lawrence, Prof. J. T. Willard of Manhattan, Prof. L. E. Sayre of Lawrence, Dr. R. S. Magee of Topeka, Dr. Sarah E. Greenfield of Topeka, Mr. W. J. V. Deacon of Topeka; and the conferees of the Board, who are, Mr. J. A. Kimball of Salina, Mr. F. E. Evans of Wichita, and Mr. Fred Morns of Topeka.

The position of state registrar under Senate bill No. 90, Laws of 1911, was then passed upon, and upon the recommendation of the secretary Mr. W. J. V. Deacon was unanimously chosen as state registrar, vacating his present position as assistant chief food and drug inspector, whereupon the secretary recommended the election of Mr. Floyd Tilford, one of our present drug inspectors, to fill the position of assistant chief food and drug inspector, and he was accordingly unanimously elected.

Rules and regulations for the enforcement of Senate bill No. 90, Laws of 1911, were then presented, and after reading them and a discussion thereon they were unanimously adopted. These rules and regulations have been printed in pamphlet form and will be furnished to any one upon request.

## MINUTES OF EXTRAORDINARY SESSION OF STATE BOARD OF HEALTH.

HELD IN LAWRENCE, JUNE 12, 1911.

In accordance with the call of the president the State Board of Health met in extraordinary session at Snow Hall, at the University of Kansas, Lawrence, at 4.30 P. M., on June 12, 1911.

Upon roll call all of the members of the Board were present and all of the members of the advisory board except Professor Sayre and Professor Willard, and Mr. Evans and Mr. Morns of the conferees.

The minutes of the last quarterly meeting were then read, and upon motion were approved and ordered placed on file.

Following this the annual report of the secretary was read, whereupon a discussion of the same was entered into by the members of the Board, and the recommendations of the secretary taken up with the following results:

That the recommendation of the standardization of disinfectants be referred to the committee on food and drug standards, to make a report at the next quarterly meeting, in September.

The recommendation of the secretary that we be authorized to secure a lecturer for the tuberculosis exhibit in the place of Doctor Emley, who resigned, was approved.

That the recommendation to request the sanitary live-stock commissioner to declare a muzzling upon all dogs in the state of Kansas for a period of ninety days was unanimously approved.

After a discussion as to what authority the State Board of Health had in the matter of railroad camps that are not supplying food as a portion of their compensation, the attorney for the board advised that the matter be referred to the local boards of health to operate under the general nuisance law.

The matter of the operation of the vital statistics law and a consideration of the insufficient appropriations made by the legislature was then taken up, and the plan presented by the secretary was approved. The plan was as follows: That one clerk be secured from the emergency fund, that one be secured from the tuberculosis fund, and that the third be provided for by the city clerks of the cities of the first class, under such arrangements as will prove satisfactory to said clerks.

The special committee appointed at the last quarterly meeting to formulate and present a regulation providing for a minimum time limit on quarantine then made their report, and upon the request of the committee the committee was

continued, to make a final report at the next quarterly meeting. It was moved and unanimously carried that the minimum time limit for the quarantine of epidemic anterior poliomyelitis be four weeks and that the quarantine be absolute; and also that the house or place where such disease occurred should be thoroughly and effectively screened against flies.

The Board then adjourned for supper, to reconvene at nine o'clock P. M.

At eight o'clock Chancellor Strong of the University formally opened the first summer school for physicians and health officers ever conducted in Kansas. There were twenty-eight physicians present at this formal opening. Doctor Sudler followed with an address on "The relation of the school of medicine to public health work." After this, at nine P. M., the State Board of Health reconvened in extra session, whereupon the secretary presented the report of the special investigation on the so-called common or roller towel, which report was as follows:

#### INVESTIGATION OF THE PUBLIC TOWEL.

"On May 9 and 10 the hotels and other public places of Topeka, Burlingame and Emporia were visited for the purpose of making an investigation on the public towel.

"The results of this investigation are given in tabulated form below:

#### QUALITATIVE TEST FOR BACTERIA.

Towel.	Culture.	Time.	Stain.	Observations.*
1. Used .....	Blood serum ....	48 hrs....	Grams....	Gram-bacillus.
2. Used .....	Blood serum ....	48 hrs....	Grams....	Gram-bacillus. Gram-staphylococcus. Gram-staphylococcus. Staphylococcus aureus. Small gram-staphylococcus. Small gram-bacillus. Staphylococcus albus.
3. Used .....	Blood serum ....	48 hrs....	Grams....	Gram-diplococcus. Small gram-staphylococcus. Gram-bacillus.
4. Used .....	Pl. ag. plate ....	48 hrs....	Grams....	Gram-staphylococcus. Gram-staphylococcus. Gram-bacillus. Small gram-bacillus.
5. Used .....	Pl. ag. plate ....	48 hrs....	Grams....	Gram-diplococcus. Small gram-staphylococcus. Small gram-bacillus.
6. Used .....	Pl. ag. plate ....	48 hrs....	Grams....	Small gram-staphylococcus. Small gram-bacillus.
7. Used .....	Pl. ag. plate ....	48 hrs....	Grams....	Small gram-staphylococcus. Gram-bacillus, spore-forming.
8. Fresh laundered..	Pl. ag. plate ....	48 hrs....	Grams....	Gram-staphylococcus.

\* Gram-, a gram negative stain; Gram+, a gram positive stain.

The blood serum cultures were obtained by rubbing a sterile platinum loop over the surface of the towel and then smearing the bacteria on the platinum loop over the surface of the blood serum culture.

In making the plate cultures, an emulsion was made of a small piece of towel in sterile water, and then the usual technique of making plate cultures was followed.

## EXAMINATION OF THE CENTRIFUGED MATTER FROM THE TOWEL.

A piece of towel 5 cm. square was stirred around in water free from bacteria, and the water then centrifuged and the centrifuged matter examined under a microscope.

Towel.	Observations.
1. Used .....	Epithelial cells. Bacteria, motile.
2. Used .....	Epithelial cells, very numerous. Bacteria, motile.
3. Used .....	Epithelial cells, quite numerous. Bacteria. Starch grains.
4. Used .....	Epithelial cells. Bacteria, a small bacilli being very numerous.
5. Used .....	A few epithelial cells. Bacteria, motile and nonmotile.
6. Fresh laundered..	A very few epithelial cells.

## EXPERIMENT ON GUINEA PIGS.

At the suggestion of Doctor Barber, an experiment was made on guinea pigs, which consisted of making an emulsion of a piece of towel in sterile-normal salt solution, and injecting this into the peritoneum of a guinea pig.

Towel.	Pig.	Wt.	Doss.	Time.	Results.
1. Used .....	1. Black face.....	425 gms.	2 cc.	5-12-9-10 A. M.	5/22, negative.
2. Used .....	2. White nose.....	425 gms.	1 cc.	5-12-9-10 A. M.	5/22, negative.
	3. White spots.....	184 gms.	1 cc.	5-12-9-10 A. M.	5/22, negative.
	4. Brown .....	182 gms.	1 cc.	5-12-9-10 A. M.	5/22, negative.
3. Used .....	5. Black face.....	255 gms.	1 cc.	5-12-9-10 A. M.	5/22, negative.
	6. Black, white.....	170 gms.	1 cc.	5-12-9-10 A. M.	5/22, negative.
	7. Small brown....	171 gms.	1 cc.	5-12-9-10 A. M.	5/22, negative.
4. Used .....	8. Small brown....	172 gms.	1 cc.	5-12-9-10 A. M.	5/22, negative.
5. Used .....	9. Light brown....	396 gms.	2 cc.	5-12-9-10 A. M.	5/22, negative.
6. Fresh laundered..	10. White .....	537 gms.	2 cc.	5-12-9-10 A. M.	5/22, negative.
	11. Brown .....	170 gms.	1 cc.	5-12-9-10 A. M.	5/22, negative.
	12. Brown .....	169 gms.	1 cc.	5-12-9-10 A. M.	5/22, negative.

During the time of this experiment up to May 22, not one of the pigs showed any illness.

Guinea pig No. 9 was inoculated with 2 cc. of an emulsion made from a towel which was estimated to have 1,331,200 bacteria to the square centimeter.

On May 18 and 19 the hotels and other public places of Ottawa, Olathe and Kansas City, Kan., were visited for the purpose of making a further investigation of the public towel.

The results of this investigation are given in tabulated form below:

Towel.	Culture.	Time.	Stain.	Observations.*
1. Used .....	Blood serum....	48 hrs....	Grams....	Staphylococcus aureus. Gram-staphylococcus.
2. Used .....	Blood serum....	48 hrs....	Grams....	Staphylococcus aureus. Gram-bacillus. Large gram-staphylococcus.
3. Used .....	Blood serum....	48 hrs....	Grams....	Gram-staphylococcus. Gram-staphylococcus. Gram-bacillus.
4. Used .....	Blood serum....	48 hrs....	Grams....	Staphylococcus aureus. Staphylococcus albus. Gram-staphylococcus.
5. Used .....	Blood serum....	48 hrs....	Grams....	Gram-staphylococcus. Gram-diplococcus. Small gram-bacillus.
6. Used .....	Blood serum....	48 hrs....	Grams....	Gram-staphylococcus. Yeasts cells.
7. Fresh laundered..	Blood serum....	48 hrs....	Grams....	Gram-staphylococcus.

\* Gram-, a gram negative stain; a gram- positive stain.

## QUANTITATIVE ESTIMATION OF BACTERIA TO THE SQUARE CENTIMETER.

Towel.	Cultures.	Time.	Results.
1. Very dirty.....	Pl. ag. plate....	48 hrs....	1,331,200 bacteria to the square centimeter.
2. Used once or twice....	Pl. ag. plate....	48 hrs....	5200 bacteria to the square centimeter.
3. Fresh laundered.....	Pl. ag. plate....	48 hrs....	No bacteria.

"In making this test, a piece of towel one square centimeter was transferred with sterile precautions to 100 cc. of sterile water. This was thoroughly shaken up, then two drops transferred to a plate culture, using a sterile 1 cc. pipette equivalent to 33 drops of water.

"The culture was kept at a temperature of 38 degrees Centigrade for 48 hrs., after which the colonies were counted, and from this the number of bacteria to the square centimeter was estimated.

## PRESUMPTIVE TEST FOR BACILLUS COLI COMMUNIS.

Towel.	Time.	Lactose bile.
1. Used.....	48 hrs.....	No change.
2. Used.....	48 hrs.....	No change.
3. Used.....	48 hrs.....	No change.
4. Used.....	48 hrs.....	No change.
5. Used, dirty.....	48 hrs.....	Gas formation, about 25 per cent.
6. Used.....	48 hrs.....	Gas formation, about 25 per cent.
7. Fresh laundered.....	48 hrs.....	No change.
8. Fresh laundered.....	48 hrs.....	No change.

"This test was made by transferring a small piece of the towel, with sterile precautions, to the tube containing the lactose bile. The formation of gas in two of the tubes is a presumptive test for colon bacillus.

## SUMMARY OF RESULTS.

"The experiment on guinea pigs shows that there were no bacteria on the towels used capable of setting up an acute infection to the guinea pigs. However, this test does not prove much, for it is well known that most bacteria pathogenic to man are destroyed by exposure to light and drying. The greater danger therefore to man would be in his using the towel immediately after some one else had used it. The above experiment on guinea pigs does not exclude the possibility of them becoming infected with tuberculosis later on.

"The finding of numerous epithelial cells in the contrifuged matter from the towel shows that the possibilities of catching contagious diseases, especially those of the skin, by use of the public towel are very great.

"The positive indication of *Bacillus coli* being present on two of the towels shows that the towels must have been contaminated with fecal matter, and hence is a danger signal and an indication that it may have been accompanied by the typhoid bacillus.

"The work of this investigation was carried on in the bacteriological laboratory of the Medical School at the University of Kansas, Lawrence, Kan.

PAUL H. CARL, *Bacteriologist.*

Upon motion the following resolution was unanimously adopted and ordered published in the official state paper:

## ABOLITION OF THE COMMON TOWEL.

*Ruling by State Board of Health.*

That the use of the common roller towel in hotels, railway trains, public and private schools is prohibited from and after September 1, 1911.

No person or corporation shall place, furnish or keep in place, in any hotel, railway train, railway station, public or private school, any

towel for the common public use, and no person or corporation in charge or control of any such place shall permit in such place the use of the common towel.

The term "common towel" as used herein shall be construed to mean roller towels and towels intended or available for common use by more than one person without being laundered after such use.

#### REPORT OF DOCTOR GREENFIELD, STATE BACTERIOLOGIST.

"The following are the examinations which have been made by me since July 1, 1910, until the present time, June 12, 1911:

Total number of specimens examined, 2374.

Specimens examined for tuberculosis, 1531.

Specimens examined for diphtheria, 443.

Specimens of blood tested for the Widal reaction, 219.

Samples of water tested for the *Coli communis*, 137.

Specimens examined for the gonococcus, 18.

The brains of 13 dogs, 5 squirrels, 2 hogs, 1 calf and 1 rabbit were examined for the Negri bodies, the organisms which are supposed to be the etiological factor in rabies.

One specimen was examined for cerebrospinal meningitis.

Two rabbits were inoculated with the brains of dogs.

Of the 1531 specimens of sputum examined, 372 showed tubercle bacilli.

Of the 443 specimens of suspected diphtheria examined, 140 showed the Klebs-Loeffler bacillus.

Of the 219 specimens of blood tested for the Widal reaction, 92 were positive.

Of the 137 samples of water tested for the bacillus *Coli communis*, 62 were positive.

Of the 18 specimens from suspected cases of gonorrhea, 7 were positive.

"The negri bodies were found in six cases; three or four cases were suspicious, but diagnosis not fully established. One of the rabbits inoculated died with typical symptoms of rabies on the 23d day after inoculation. The other rabbit, which was inoculated with the brain of a dog that had but few symptoms of rabies, is still alive and well, 18 days after inoculation.

Respectfully submitted.

SARA E. GREENFIELD."

#### REPORT OF J. T. WILLARD, FOOD ANALYST,

##### *On Ketchups and Similar Preparations.*

"A considerable number of ketchups and similar preparations were sent us for examination. The criteria for judgment upon such articles are not at all well established. Of course benzoate of soda under the rulings of the federal authorities may be used to the extent of one-tenth of one per cent. The fact that otherwise waste material is used in making these products is well known. It is alleged that the use of benzoate of soda for the preservation of stock until it can be worked up facilitates the use of material that is more or less moldy or otherwise decomposed.

"In forming a judgment upon these articles, therefore, the federal authorities have made use of the microscope, and counts of organisms, or evidences of organisms, present. The Bureau of Chemistry has issued Circular No. 68, by B. J. Howard, chief of the Microchemical Laboratory, the subject being "Tomato Ketchup Under the Microscope." In the course of the discussion the author expresses the view that it is feasible to keep the number of yeasts and spores in one-sixtieth of a cubic millimeter below twenty-five. Home-made ketchup contains practically none. Laboratory experiments are alleged to show that when the number of yeasts in raw pulp reaches thirty to thirty-five in one-sixtieth cubic millimeter the spoilage may frequently be detected by an expert by odor or taste.

"In respect to bacteria the opinion is expressed that the bacterial content of the final product should be within twenty-five million per cubic

centimeter. Pulp previous to concentration should not exceed about half this number.

"In the examination of the samples sent us we are under the highest obligation to Mr. L. D. Bushnell, of the Department of Bacteriology, Kansas State Agricultural College, without whose assistance and instruction it would not have been possible to do the work, and indeed much of the work was done by him.

"Thirty-seven samples have been reported upon, and without going into detail at this time in respect to them it may be stated that because of excess of bacteria or excess of yeasts and spores only four of the number would conform to the requirements suggested in the circular referred to above.

"Whether or not the Board should characterize as illegal the sale of articles of this quality is a debatable question. It is probably true that the best way of dealing with problems of this kind is by the maintenance of a close system of inspection of manufacturing establishments. This should be done under such an organization that inspection by one authority, either state or federal, should suffice to meet the needs of all other states in respect to a given establishment."

#### REPORT OF PROFESSOR E. H. S. BAILEY.

##### *Report of Work Finished and in Progress in the Food Laboratory to June 1, 1911.*

"About thirty vanilla extracts practically completed but not yet reported on.

"Ten samples of pickles being examined for alum and preservatives and nearing completion.

"Twenty-four samples of canned tomatoes being studied to see if water has been added to the tomatoes in the process of canning. These nearly finished.

"An investigation being made of the manufacture of terpeneless extract of lemon. This subject came up on account of the report in the March and April BULLETIN, showing about thirty commercial extracts below standard, and many of them very far below. The work is not finished, but enough has been found out to indicate that many producers of this product have not at all understood its production. Work will be continued, with the object of finding the proper method of preparation of this article.

"An investigation of the addition of starch to compressed yeast in order to determine if it is an adulterant under the Kansas law. The work has been done by a student in food analysis as a thesis for the master's degree. The result is inconclusive, and points to further work on problems of exact analytical methods. There is a good deal to indicate, however, that water is or may be a greater adulterant than starch, and that until a good deal more is known about the subject no action in regard to standards should be taken.

"An investigation involving in part the analysis of about thirty vinegars, made in the food laboratory from Kansas apples, for the gathering of data on known pure products. Vinegar is one of the most largely manipulated food products, and is often very difficult to judge. The work is being done by a student in food analysis as a thesis for the master's degree, and is not completed.

"A study of twenty honeys has been made by a student from Washburn, chiefly in the food laboratory at the University of Kansas, but also some at Washburn. The results were offered as a thesis for the A. B. degree in Washburn. The honeys were taken upon the Kansas markets by food inspectors, and represented chiefly honeys shipped in from outside the state, but also some native production. The results showed that all but two are above suspicion, and these two will be further examined.

"There are about thirty-five miscellaneous samples in process of examination or waiting to be examined, several of which need special study.

as they are new, understandardized products for which methods have not been worked out.

"A year ago a study of the deterioration of baking powder with age was started by analyzing about forty brands and putting away samples for reanalysis when they should be, respectively, one, two and three years old. The second analysis should have been done by March, 1911, but could not be undertaken on account of the number of routine samples sent in by inspectors. It is possible that the work can be continued this fall.

"In February, 1910, twenty-two samples of first, second and third molasses were kindly secured by Sprague, Warner & Co., of Chicago, and presented to the food laboratory for study for data on such products. Due to pressure of routine work, these have not been analyzed to date, and the information they would have afforded has not been available in judging other products.

"In many ways it is constantly seen that investigations of greater or less length are needed in addition to the routine examination of foods sent in by the inspectors. This work is absolutely essential if the routine work is to be done in an intelligent and just manner, as new problems are constantly arising and new products appearing on the market. Unless this phase of the work is duly recognized and provided for, the routine state work can not reach its highest possible efficiency.

"It should be pointed out in this connection that unless a stenographer-clerk can be provided for the food laboratory for at least half time for the coming year, that the writer's time must be increasingly taken up with clerical work of many kinds, and less and less of his time left available for chemical work. Present conditions constitute an uneconomical division of labor.

"For the rest, the work completed during the last quarter is to be found in the State Board of Health BULLETIN.

Respectfully,

H. LOUIS JACKSON,

*In charge of Food Laboratory."*

#### REPORT.

"Since March 1 the water analysis laboratory has examined 100 samples of water, 56 of which are present city supplies; the remainder are principally proposed city supplies; however, some 8 or 10 are private supplies, sent in at the request of county health officials.

"The water analysis laboratory is endeavoring to make a complete survey of all of the city supplies in the state, preparatory to making a request to the State Board of Health for a special order of the Board to be that each city supply have an analysis made once a year for the next four years. These four analyses will be made at different times of the year, so that some of the characteristic variations of the supplies may be recorded, both for the mineral and organic materials in the water. This data should be in the hands of the state sanitary engineer, and we believe it would be exceptionally valuable when locating new supplies or improving old ones.

May 31, 1911.		C. C. YOUNG, <i>Chemist State Water Survey.</i>

Following the analysts' report was the annual report of the state engineer, which is as follows:

#### ANNUAL REPORT OF THE ENGINEER OF THE STATE BOARD OF HEALTH.

The work of the engineering office for the past year has been approximately the same as that of the year preceding, though the volume of work attended to has been somewhat greater. The addition of Mr. Veatch to the office on the first of September has made it possible to meet the added demands made upon us.

#### WATER AND SEWAGE PURIFICATION PLANTS.

We have tried this year to put into effect a plan that has long been in mind looking toward a certain degree of control by the State Board of Health over the operation and maintenance of water and sewage purifica-

tion plants. There are forty-four water supplies in the state using water from surface sources. Of these, twenty-five supplies are purified in some degree before being delivered into the mains. Many of these purification plants are capable of furnishing better water than is secured from them, provided they are better operated. We have met almost uniformly a desire on the part of the city officials for some plan of coöperation by which the city could be furnished systematically with expert advice with relation to the operation of its purification plant. It is evident that it would be very desirable indeed, from the standpoint of the Board, if this relationship were such that systematic and regular reports concerning the operation of all these plants could be provided for in connection with a system of inspection by the Board.

The same condition, in general, exists with respect to sewage purification plants, of which the number in the state is at present between forty and fifty. About a dozen more are now under contract or will be built within the next year. Our experience with sewage disposal plants indicates that there is great need for a readjustment of our ideas concerning them. Practically all our Kansas plants are equipped with automatic devices, whereby the proper distribution of the sewage is maintained and the regularly intermittent dosing of the filters is secured. The tendency of the city officials charged with the care of the sewage system is to neglect entirely to look after the disposal plant until something goes wrong. Even when it is thus called to their attention, its needs oftentimes receive only scant courtesy. A sewage disposal plant, unlike a water purification or an electric lighting plant, brings in no revenue, and consequently whatever attention it receives is oftentimes grudgingly given, and then only from the pressure of dire necessity.

It has been our wish to make systematic inspections of all water and sewage purification plants in the state as frequently as there should be need for it, and to advise with the city officials regarding their operation and maintenance. The waterworks and sewage superintendents would be instructed in the manipulation of rapid methods of making certain easy and approximate tests of the character of the work being done by their respective plants, and more complete analyses and investigations would be made when necessary by the water survey and bacteriological laboratory of the University. A system of monthly reports to be made to the Board would give us many extremely useful data and would help to insure for the plants the continuous care and attention they need. A plan for all this has been pretty well worked out, but we have so far found it impossible to put it into effect on account of lack of time. We are expecting to begin this work, however, during the coming summer.

#### DROUTH CONDITIONS.

The drouth of the past twenty-four or twenty-five months has been one of the most severe and widespread in the history of the state. It has affected the sanitary situation in two important respects. In the first place the long-continued dry weather has resulted in the drying up of many of the smaller streams and in greatly decreasing the flow of all streams of the state. This extreme low-water condition has in many places accentuated the nuisance resulting from the discharge of sewage and industrial wastes into the streams, in a number of instances resulting in a very serious public nuisance. This condition has called attention sharply to the need for a careful investigation of the various streams of the state that receive industrial wastes, with a view to limiting these waters to an amount that the stream can properly assimilate. In the second place, the long-continued drouth has resulted in such a lowering of the general ground-water level as to seriously affect many city water supplies, particularly those from shallow wells. There are probably fifty cities in the state that have felt this condition severely, while perhaps a third of that number have faced a serious shortage in their supply. A few supplies have failed entirely, leaving the cities depending upon

them without water. This is a condition serious in the extreme, and should call attention to the importance of having a very large margin of safety in a municipal water supply.

#### SANITARY SURVEY OF NEOSHO AND VERDIGRIS RIVERS.

Perhaps the most important piece of work during the year was the sanitary survey of the drainage areas of the Neosho and Verdigris rivers. A preliminary report of this investigation was made to the Board at its March meeting, at which time a special committee was appointed by the Board to endeavor to carry into effect the recommendations made by this report. This preliminary report was published in the May BULLETIN of the department. The engineering department is continuing to gather information concerning this problem, however, as it is realized that this is not a matter that can be settled all at once, but that the proposed plan of adjustment will require perhaps years for its complete realization.

#### SEWERAGE AND WATERWORKS CONSTRUCTION IN THE STATE.

During the early spring the activity of the cities of the state looking toward the construction of sewerage and waterworks systems was somewhat lessened, in view of the approaching city election. After the elections the activity in this direction increased greatly, as not only was the deferred work taken up again, but in a large number of the smaller cities the question of waterworks or sewers was an election issue and was voted on favorably. This is particularly true with respect to the cities in the northwestern part of the state.

#### SEWERAGE DATA AND REPORTS.

During the past few months the information and data relating to sewerage and sewage disposal plants in the state has been worked over and put into more systematic form. Many of the records of city sewage disposal systems on file in the office of the Board were very incomplete, and these have been amended and brought up to date.

#### DETAILED STATEMENTS OF WATER-SUPPLY AND SEWERAGE WORK.

Following are brief statements of the routine work of the engineering department, with reference to municipal water supply and sewerage, and the investigation of cases of stream pollution during the past year:

##### *Kansas City.*

**WATER PURIFICATION PLANT.**—The new water purification plant for Kansas City is now nearing completion. This plant consists of elaborate settling basins, wherein the sediment of the Missouri river water is largely removed with the aid of a chemical coagulant, followed by a system of rapid sand filters. The whole plant has been very carefully designed and is thoroughly modern in character.

##### *Topeka.*

**SEWER EXTENSION AND CHANGES.**—The construction of several sewer extensions and new districts has been authorized during the year. Also, during November and December consideration was given to a change in the outlet of the main sewer of district 29, from the Kaw river to the revised channel of Ward's creek, this change being asked for by drainage district making improvements at this point. This change was approved on condition that the drainage district keep the channel of the creek clear of brush and other obstructions between the new sewer outlet and the river, and that the district assume responsibility for any local nuisance that might be created in this part of the channel by reason of the discharge of sewage into it.

##### *Coffeyville.*

**WATER SUPPLY.**—During the summer of last year the city of Coffeyville continued its search for a ground-water supply in the Verdigris river bottoms, and came to the conclusion that it would be impossible

to economically develop a sufficient supply of water from wells or filter galleries to meet the future needs of the city. The question of an improved water supply was then dropped for the time being, but lately has been revived. The present plan is to build a thoroughly modern and efficient filtration plant for the purification of the Verdigris river water, and otherwise to improve and strengthen the water-supply system. This plan is now under consideration and will likely be realized in the near future.

**POLLUTION OF VERDIGRIS RIVER.**—Early in November, at the request of Dr. E. C. Wickersham, the county health officer of Montgomery county, an investigation of the Verdigris river at Coffeyville was made. As a result of this investigation, a report was made to Doctor Wickersham, reciting that the existing offensive condition of the pool in the river at the southern edge of the city was an unusual condition occasioned by the great decrease in the flow of the stream; that to cure the evil at once by arbitrary means was manifestly impossible, and that even to prevent its recurrence in the future, under similar conditions of drouth on the drainage area of the river, might scarcely be worth the cost; that the present condition, while offensive to the senses and doubtless in some degree also prejudicial to health, was a transient condition only, and would pass with the first flushing out of the river pool; and, finally, that it would be better to put up with the nuisance during the present trying period rather than to force several important industries to suspend operations.

*Hutchinson.*

**SEWAGE DISPOSAL.**—The matter of the pollution of Cow creek by sewage from Hutchinson was investigated last summer, and was reported to the Board at its September meeting. At that time, also, several members of the Board personally inspected the creek for a short distance. As a result, the city of Hutchinson was placed under order by the Board to provide suitable means for the disposal of its sewage by January 1, 1912, the means to be approved by your engineer. During May, your secretary and engineer spent a day in the city in conference with Mayor Vincent, Commissioner Graybill, and City Engineer McLane, on the sewage disposal situation. So far no definite plans have been submitted, but the city is at present engaged in working them out.

*Parsons.*

**SEWAGE DISPOSAL.**—I am glad to be able to report that the plans for the purification of the sewage of the city of Parsons have been finally worked out and agreed upon, and that the city is now actively pushing the construction work. The movement to purify the sewage of the city and thus eliminate the nuisance in Big and Little Labette creeks near town was begun about two years ago, as a result of an investigation of the condition of these creeks by your engineer. At first tentative plans were worked out for a purification plant for the east side district alone. It was recommended to the city, however, that before accepting this method, and thus committing the city for all time to three or more separate disposal plants, a careful investigation should be made to see if all the sewage could not be carried to a point near the junction of the two creeks, about a mile and a half southeast of the city limits, and there purified in a single large disposal plant. A careful survey by the city engineer showed this scheme to be possible, and new plans were accordingly drawn for a large sewer to bring all the sewage to this point and for a disposal plant. This plant is to have a capacity of 2,000,000 gallons of sewage per day, and is to consist of septic tanks and contact filters, with an auxiliary pumping equipment to permit the plant to be operated during high-water periods in the creek. This plan involves the abandonment of the present south side septic tank, which was originally poorly designed and is now badly overworked.

Upon representations made by the city relative to the very large cost

of the proposed improvement, and showing that the creek below the location of the proposed plant traverses a wooded and farming country for many miles, with no residences and few roads near it, it was agreed that the city should at present build the outfall sewer, the four septic tank units, and the pumping plant, and for a time should discharge the septic tank effluent into the creek; but that at any time after two years, whenever the Board of Health should determine that the discharge of the partially purified sewage into the creek had become prejudicial to the public health, the city should complete the plant by the construction of the contact filters. Also, that the sludge bed for the septic tank need not be built until it should become necessary to clean out the tank. The realization of this plan will result in the elimination of one of the worst nuisances in the state.

#### *Lawrence.*

**TYPHOID FEVER.**—Early in October your secretary and engineer, in company with the local health officer, investigated what has been reported in the newspapers as a typhoid fever epidemic in the western part of Lawrence. We found the situation was being adequately handled by the local authorities, and nothing beyond a preliminary investigation was attempted. This proved to be not an epidemic, but three or four cases that had been imported by laborers, together with two or possibly three cases of secondary infection. Two students and one member of the faculty of the University also had the disease at the same time, having brought it with them from outside of the city. The local health officials took active charge of the situation, with the result that no new cases developed.

#### *Independence.*

**POLLUTION OF ROCK CREEK.**—Many bitter complaints regarding the foul condition of Rock creek, in Montgomery county, during August, and that the sewage from a part of the city of Independence and wastes from an oil refinery and a mineral-rubber plant were being discharged into the creek in such a manner and under such conditions as to be prejudicial to the public health, were reported to the Board at its December meeting, and an order to the city and each of the manufacturing companies was issued, looking toward the future protection of the creek from gross pollution.

**WEST SIDE DISPOSAL PLANT.**—On a number of occasions during the summer and fall of 1910 visits of inspection were made to the disposal plant of the west side sewer system. This plant consists of three septic tank units and eight contact filter beds. The effluent of the plant flows into Rock creek, at the southwest corner of the city, and complaint had been made to the Board alleging the existence of bad odors from both the creek and the plant. At that time the plant had been in operation only a few months. Upon investigation it was found that, owing to several openings into the sewer that had been made by plumbers and a manufacturing company, a very large amount of rain water from the surface run-off had found its way into the sewer during rain-storms. This strong flow of muddy water had tended not only to fill the septic tank with silt, but had flushed the lighter sludge already deposited in the tank out over the surface of the contact filters. Thus both the tanks and the filters had become badly sludged up. In an effort to clean the sludge beds the septic tank effluent had been turned directly into the creek for a number of days, resulting in the gross pollution of the stream.

It was recommended to the city engineer, Mr. A. D. Stivers, who had charge of the plant, that he first clean out the septic tanks, taking one compartment at a time; then that he cut out of service one group of four filter beds, allow them to drain and aerate thoroughly, and clean the stone by screening; then that this group be put back into service and the second group be cleaned in like manner. City Engineer Stivers suggested a flushing out of the channel of the stream by a strong flow of water from

the city mains, and this was sanctioned, with the additional recommendation that a narrow and deep channel be dug to connect the various pools, and thus facilitate the work.

The location of this purification plant is unfortunate, owing to the proximity of a number of residences, and there is the greatest need of keeping the premises in a thoroughly sanitary and attractive condition.

#### *Fort Scott.*

**DISPOSAL OF WASTES FROM SYRUP FACTORY.**—In October, in response to complaints of a serious nuisance resulting from the discharge of wastes from the plant of the Fort Scott Syrup and Manufacturing Company into a dry watercourse at the edge of town, a preliminary examination of the locality was made by your secretary and engineer. This was followed by a careful investigation of the whole situation by Mr. Veatch, with the result that a recommendation was made to the Board looking toward the laying of a sewer to the Marmaton river in which to carry the manufacturing wastes.

#### *Arkansas City.*

**PROPOSED NEW WATER SUPPLY.**—During the summer and fall of 1910 Arkansas City was again short of water. The long-continued dry weather had not only decreased the yield of the present sources of supply, but it had also tended to increase the consumption. Unfortunately, also, the city has been operating its water plant largely under a flat rate system of selling water, with the result that the per capita water consumption for house purposes has been considerably above the average of other cities of the same size. As a result of all these factors, it had seemed necessary on a number of occasions to supplement the normal supply of ground-water by the addition of Arkansas river water from the power canal that flows past the pumping plant. This river water, when so used, was partially purified in an emergency filter, but not to an extent sufficient to insure its wholesomeness. This method of reinforcing the regular supply was looked upon with disfavor by the citizens themselves, and in August it was discontinued.

At this time the supply of ground-water was so short that even with strict enforcement of an order against lawn sprinkling it was impossible to deliver water above the first stories of business buildings on some of the main streets.

During the fall the city officials had investigations made and plans prepared for the development of a new supply of water by means of a filter gallery built in a shallow deposit of sand and gravel along the Arkansas river, and for extensive additions to the pumping equipment and distribution system. Your engineer on a number of occasions met with the city officials and with representatives of the commercial organizations, as well as with the designing engineers employed by the city, and kept closely in touch with what was seen to be an important but extremely difficult situation. The final outcome was that at an election in November the proposition to vote bonds for the improvement was defeated.

#### *Newton.*

**SEWERAGE AND SEWAGE DISPOSAL.**—During the present year the plan inaugurated two years ago to give the city of Newton an efficient and comprehensive system of sewerage and a single plant has been finally realized. The disposal plant is located on Sand creek, at a point far below town, and at a considerable distance from any residences, present or prospective.

Several visits have been made to the plant during the year, and suggestions and recommendations have been made to the city officials regarding the operation and maintenance of the plant.

*Wellington.*

**EMERGENCY WATER SUPPLY.**—The protracted drouth, together with the greatly increased consumption due to the growth of the city, resulted last summer in a failure of the wells supplying the city of Wellington with water to meet the demands made upon them. Resort was had to the old-time supply of impounded water in the Slate creek reservoir, and a considerable part of the total city supply was taken from this source during the summer. To meet the emergency a plan for the temporary use of a large well to be sunk into a gravel bed near the edge of town was approved.

*Cherryvale.*

**NEW WATER SUPPLY.**—The drouth of the summer of 1910 resulted in the complete failure of the impounding reservoir supplying Cherryvale with water. For several months this city was entirely without a supply, except for such small quantities as could be secured from pools in near-by creeks and pumped into the city mains through temporary lines of pipe. Late in the fall, bonds to the extent of \$105,000 were authorized at a city election, for the purpose of securing a new supply from the Verdigris river. The plans for this work were at once drawn up and a contract for the pumping station and six-mile supply conduit was let, and the construction of this part of the system has been carried to completion. It is the expectation as soon as this is finished to begin to pump water from the river directly into the city distribution system without waiting for the completion of the filter plant.

Upon formal inquiry from the city asking whether or not the city would be permitted to omit the filtration plant from the proposed supply system and use the money thus saved in other directions, the city officials were advised that such omission would not be sanctioned and that a recommendation to omit this part of the system would not be made by the engineering department.

*Rosedale.*

**SEWERAGE.**—A number of meetings have been held with the mayor and council and other officials of Rosedale, with a view to working out a general plan for the sewerage of the city. The need for deciding upon some general plan at an early date was brought about by the preparation of plans by the Board of Public Works of Kansas City, Mo., for the diversion of Turkey creek through the Argentine ridge and for the completion of the sewer system of the O. K. creek drainage area. The consideration of other questions at the same time by the citizens of Rosedale, notably that of a possible union with Kansas City, Kan., has made it seem advisable to defer decisive action upon the sewerage problems; and now it appears as if the matter has again been indefinitely postponed. There is the greatest possible need for the sewerage of this city. It is now by far the largest city in the state without a sewer system.

*Garden City.*

**SEWERAGE.**—In December a visit was made to Garden City at the request of the mayor and council, to advise concerning the installation of a sewerage system. A careful examination of the city was made, and the conditions along the water front below the city with reference to the location of the sewer outlet were examined. Following this visit the mayor and council had preliminary plans drawn up, but up to the present time no further action has been taken. There is the greatest need for sewers in Garden City, and a very general demand for them. At the present time, Rosedale and Garden City are the largest cities in the state without sewerage facilities.

**IMPROVED WATER SUPPLY.**—The question of a soft water supply for Garden City from deep wells has been again brought to the fore by some of the citizens of the town and has been freely discussed. Comparative

analyses have been made for the city officials, and reports have been drawn up showing the relative values of the hard and soft waters of the region. The city has wished to defer action looking toward a better supply until the sewerage system has been secured, however, and it is expected that as soon as the sewers are built the new water supply will be developed.

#### *Herington.*

**SEWERAGE.**—The past year has witnessed the completion of a comprehensive and well-planned sewerage system for the city of Herington. The system includes a septic tank installation in three units, located about a half mile south of the city limits. This system has been completed within the past month.

**NEW WATER SUPPLY.**—The supply of soft water from a shallow well and infiltration gallery, built over a year ago, has proved to be inadequate to meet the growing needs of the city, and it has become necessary to develop an additional supply. There is a considerable number of large springs within the city limits of Herington, probably a dozen of these having a dry-weather yield of from 25 to 200 gallons per minute each. The water from these springs is only moderately hard and would make an acceptable supply were it not for the fact that the city itself is built all around them. These springs are fed by extensive systems of fissures in the broken limestone strata of the region and apparently gather their supply from a large area. The limestone lies near the surface of the ground, and this, together with the fact that it is badly broken and fissured, makes it easy for organic pollution on the surface of the ground to be carried directly to the springs. Since the area surrounding the springs is more or less occupied by human habitations, the contamination of the water with sewage is practically inevitable. We have at different times made three tests for *Coli communis* in two of these springs, and in each case have demonstrated the presence of sewage pollution.

In view of this, in May of the present year we declined to approve the use of one of these springs as a source of additional water supply. There is a proposition now before the city to vote bonds for the purpose of developing a supply from two springs about three miles west of town, and an election for this purpose has been called.

#### *Holton.*

**SEWERAGE.**—The new sewerage system of the city of Holton has been slowly progressing toward completion and will be ready for use in about thirty days. The system as planned was very comprehensive, completely covering the entire city. About two-thirds of this has been built under the first contract, and it is expected to extend the system into the outlying districts as needed.

The system includes a sewage purification plant consisting of septic tanks and contact filters of broken stone. This plant is located beyond the railroad tracks northeast of town, and is about a half mile beyond the city limits.

#### *Olathe.*

**WATER PURIFICATION.**—Several visits have been made to this city and considerable correspondence has been carried on relating to the reinforcement and especially to the purification of the present city water supply. Last fall the matter got as far along as the discussion and adoption of preliminary plans for a system of settling basins and filters, but up to the present time no contracts have been let. It is expected that this problem will be taken up vigorously during the coming year.

**SEWAGE PURIFICATION.**—The sewage from the entire city is at present discharged into a small watercourse just at the city limits. This little stream is normally dry except immediately following rains, and the nuisance created along its course by the city sewage is offensive in the extreme. During the past two years the desirability of making some satis-

factory disposition of its sewage has been brought to the city's attention on a number of occasions, though, so far, no tangible results have been secured. It is hoped that the city will not permit this nuisance long to continue.

*Anthony.*

**INCREASED WATER SUPPLY.**—During the drouth of last fall it became necessary to reinforce by some means the water supply of the city of Anthony, and plans were approved for a new group of wells located in the valley of Bluff creek, about a mile above the present plant. The construction of this new station was hurried through to completion, and an additional supply from this source has been in successful operation since late last fall.

*Humboldt.*

**SEWAGE.**—Plans for a comprehensive sewerage system for Humboldt were approved last fall. The contract for the work was not let until this spring, however, but the system is now under construction. The system will include a septic tank plant, by which the sewage will be partially purified before being discharged into the Neosho river.

The location and plans of this septic tank have been fixed with the idea of adding contact filters or sand filters a little later, whenever the increase in the volume of sewage or the condition of the river should render such addition necessary. The completed disposal plant will be at such an elevation as to be above the reach of the floods in the river.

*Osage City.*

**SEWERAGE.**—During last fall and winter a system of sewerage for Osage City was constructed. This system includes a disposal plant consisting of septic tanks and contact filters of broken stone, by which the sewage will be brought to a condition of non-putrescibility before being discharged into Salt creek.

**WATERWORKS.**—Last summer the city finally entered upon the long-deferred construction of a city waterworks system, the plans for which had been approved earlier. This system includes a large impounding reservoir on the south fork of Salt creek, at a point about a mile south of town, and a purification plant, including settling basins, filters and clear water well. This plant was practically completed last fall, but some minor defects in the filter system have still to be corrected. When this is done this plant will be one of the best of its kind in this part of the country.

*Burlington.*

**SEWERAGE.**—During June and July of 1910 the plans and specifications for a comprehensive sewerage system for the city of Burlington were received and approved, and an application from the city was filed for a permit to discharge sewage into the Neosho river after partial purification in septic tanks. The system has been built during the months of the past spring and is now nearly ready for service.

The present construction includes a pumping plant, to be used during floods in the river for the purpose of delivering the effluent from the septic tank into the river. It is expected that broken stone or sand filters will be added at some time in the future, whenever their use is deemed necessary, and that this pumping plant will then be used continuously to deliver the effluent from the septic tanks to the filters.

**NEW WATER SUPPLY.**—During April and May of this year plans have been developed for what promises to be an excellent supply of ground water from a gravel deposit on the west bank of the Neosho, just above the city limits. A number of borings have been made by the city waterworks superintendent, and plans have been drawn and provisionally approved for the development of a new supply by means of large wells. It is expected that this will replace the present Neosho river supply.

*Garnett.*

**SEWERAGE.**—During last summer plans and specifications were approved for two sewerage systems for the two topographical divisions of the city of Garnett, and early this spring contracts were let for the construction of the south side or larger of the two systems. Each system includes a disposal plant consisting of septic tanks and broken stone contact filters, the effluent from each plant being discharged into a dry watercourse.

Several visits have been made to the city and considerable correspondence entered into in relation to the sewerage problem. The prospect now seems fair for the early realization of the long-deferred plans for the complete sewerage of the town.

**WATER SUPPLY.**—In July, 1910, official complaint was made to the Board regarding the character of the city supply, and a thorough investigation was made of the conditions surrounding the impounding of this supply, the care of the lake, and the purification of the water previous to its delivery into the mains.

It was found that, owing to the dry weather, the water in the lake was low, and that a luxuriant growth of pond weeds, mostly *potamogeton*, had been permitted to develop around the shallow margin. Moreover, some of the oily waste from the engine room had been allowed to flow into the lake, from which it was drawn into the intake and delivered to the filters, thereby producing an oil film over the sand grains and making it difficult to properly clean the filters. In addition, the surroundings of the water plant were unkempt and unsightly.

As a result of this investigation, an order was recommended, which was issued by the secretary, directing the city officials to clear all vegetation from the lake and to clean up around the premises and to put the filters into good working order again. Also to provide for the proper disposition of the wastes from the plant, and to take such other action as might be necessary to preserve the purity of the water.

*Caldwell.*

**ADDITIONAL WATER SUPPLY.**—In August, 1910, plans were approved for a large receiving well to be built as an addition to the present water supply plant. This new well is to constitute a part of an additional water supply plant, and is to be reinforced by the addition of tubular wells near by, as the demand for them arises.

It is expected that a sufficient quantity of water will be developed from ground-water sources in the neighborhood to supply the entire needs of the city, thus making it unnecessary to draw upon the waters of Bluff creek.

*Sabetha.*

**SEWERAGE.**—During July final plans were received and approved for two sewerage systems for the two topographical divisions of the city, each system including a disposal plant consisting of septic tanks and broken stone contact filters. The contract for both systems was let later in the summer and the construction work was completed by winter.

At the earnest solicitation of the mayor and council, the relocation of one of the disposal plants was sanctioned at a point much nearer town than was originally contemplated. This change seems to the city officials to be necessary on account of some unexpected right-of-way difficulties.

*Lyons.*

**SEWERAGE.**—During the winter plans for a sewerage system for the city of Lyons were received, and were approved after certain minor modifications. This system is to include a pumping plant by which the entire flow of sewage is to be raised by means of automatic sewage lifts to the level of the disposal plant, which is to be located south of the city limits on ground sloping toward a small branch of Cow creek. The com-

pressed air for operating the sewage lifts is to come from the pumping station of the city waterworks. The disposal plant is to consist of septic tanks and contact filters of broken stone, as the effluent will be discharged into a small watercourse which is normally dry during a part of the year.

No application for permit has been received from the city and no action has been taken looking toward the immediate construction of the system.

*Pleasanton.*

**SEWERAGE.**—In August plans were received and approved for a complete sewerage system for the city of Pleasanton, including a purification plant consisting of septic tanks and broken stone contact filters. It was the expectation that contracts for the construction of this system would be awarded early this spring, but up to the present time no such action has been taken.

*Russell.*

**WATERWORKS.**—About eighteen months ago, plans were received and approved for a waterworks system for the city of Russell, including an impounding reservoir on a small stream southeast of the city and filtration at that point. Later the city expressed a wish to have the purification plant located in town, and in August, 1910, modified plans involving this desired change were received and approved. Construction work on the basis of the revised plans was begun during the summer and was completed during the spring of 1911.

There is every reason to believe that the new supply will be thoroughly acceptable and satisfactory from every standpoint. The drainage area of the impounding reservoir is a sparsely settled farming community. The reservoir itself is quite large, and the length of the storage period will be great. During the construction of the dam, a very strong flow of underground water was encountered in the sand and gravel overlying the rock, and this underground stream will be intercepted and brought to the surface by the dam. In addition, the filtration plant is well designed and should be effective in removing whatever trace of impurities there may be in the water from the lake.

*Peabody.*

**ADDITIONAL WATER SUPPLY.**—In November plans were received and approved for an additional well for the reinforcement of the present city water supply.

*Smith Center.*

**WATER SUPPLY.**—During the latter part of July, 1910, a visit was made to Smith Center for the purpose of looking over the water-supply situation with the mayor and council and county health officer. On account of the long-continued dry weather the supply had become inadequate in quantity and deteriorated in quality. At this time a general plan was approved looking toward the development of an additional supply by the construction of a filtration gallery across the water-bearing stratum of the little watercourse into which the former well was sunk. After a delay of several months, plans for this addition were perfected and were submitted for approval, and the construction work is now well under way.

*Altoona.*

**WATERWORKS.**—Last summer plans were drawn up for a new waterworks system for the city of Altoona, and in August a visit was made to the city to look over the ground concerning several different sources of supply. In addition, several conferences were held with the engineers designing the plant, in regard to its location, protection from floods, and the like. The proposition has received a temporary set-back, but it is the expectation that the matter will be revived shortly.

*Augusta.*

**NEW WATER SUPPLY.**—The drouth of the past year has resulted in the almost complete failure of the wells supplying the city of Augusta with water, and the city officials have been hard put to it to keep water in the city mains for fire protection purposes. As a means of accomplishing this latter purpose a temporary well was dug which has yielded a small amount of water, which, though quite unsuitable for domestic purposes, has served to limit the fire hazard. Immediately following the spring election, the new mayor and council took up actively the problem of developing a new water supply. A visit was made to the city early in May, and after a most thorough investigation advice was given that the best way of solving the problem was to take a supply from the Walnut river and purify it by means of settling basins and filters. This plan was adopted, and the city is now constructing such a plant, under the guidance of its engineers. On account of the fact that this was an emergency matter, the city is building the plant by day labor, and is having plans prepared and approved as the work progresses, the general scheme having been sanctioned at the start.

*Baldwin.*

**SEWERAGE.**—During the past year the two sewer systems of the city have been constructed. Each of these systems is provided with a sewage disposal plant consisting of septic tanks and contact filters of broken stone, since the small creeks into which the effluents are to be discharged are dry for a part of the year.

The completion of these sewerage systems, following upon the construction of the water plant last year, places the city of Baldwin among the best-improved small cities of the state, from a sanitary standpoint.

*Hanover.*

**NEW WATER SUPPLY.**—Late last fall the city of Hanover began operations looking toward the abandonment of the former city well on the bank of the Blue river, and the construction of a new well at a distance of about a quarter of a mile from the river at a point where the supply would be entirely composed of the normal ground water of the valley, and where the operation of the plant would not be interfered with by floods in the river. In connection with this, it was proposed to set out trees and otherwise to beautify the grounds around the new well and pumping station, thus improving the appearance of the city plant and enhancing the reputation of the supply. The plans for this work were approved during the winter and the new plant is now in operation.

*Onaga.*

**NEW WATERWORKS PLANT.**—In July, 1910, an investigation was made of the proposed location of a large well to supply a new city waterworks system. The location which it was desired to use was condemned on account of an insanitary environment and because of the great difficulty that would be met in preserving the wholesomeness of the water at this point. Another location was recommended, and test holes were bored and a satisfactory supply developed at this new point. Later, plans for the waterworks plant were examined and approved. This work is now under construction.

*Nickerson.*

**SEWERAGE.**—During the summer of 1910 plans were approved for a sewerage system for the city of Nickerson. It was desired to build only a sewer to serve the high school and a few other buildings near by, but since this would require a long pipe line to the river it was strongly recommended to the mayor that the city should have plans drawn for a comprehensive system of sewers sufficient to serve the entire city for the indefinite future; then the main sewer and one or two laterals might be built at present, leaving the remainder of the system to be built after

the city had secured a public water supply and the construction of a general sewerage system should be demanded. This plan was followed out.

To provide for the flushing of the sewer lateral, a large flush tank was built on the schoolhouse grounds, to be supplied with water by a windmill and driven well equipment. Thus at a small expense the sewer can be flushed at frequent intervals, which will not only prevent deposits in the lateral, but will also minimize trouble from the same cause in the mile and a half of sewer main between the town and the river.

#### *State Imbecile Asylum at Winfield.*

**SEWAGE DISPOSAL PLANT.**—There have been many complaints in the past regarding the discharge of sewage from the state imbecile asylum west of the city of Winfield into Elm creek. This condition was investigated in November, 1910, at the request of the Board of Control of the State Charitable Institutions, and a tentative plan for taking care of the sewage from this institution was suggested and an approximate estimate of cost was made. In harmony with this, the Board of Control asked for and received from the legislature an appropriation to construct the sewage disposal plant recommended. It is the expectation that this will be built during the coming summer.

#### *Miscellaneous.*

**MATTERS RELATED TO WATER SUPPLY.**—In addition to the foregoing, visits have been made and local situations have been looked over, or conferences have been held, or investigations have been made and reports written, or plans and specifications have been examined, in connection with the public water supplies of Coffeyville, Cawker City, Lawrence, Scandia, Emporia, Jamestown, Chanute, Syracuse, Wellington, Wa Keeney, Dodge City, Wilson, Marysville, Sharon Springs, Neodesha, Burden, Yates Center, Logan, Hoisington, Waterville, Marion, Hill City, Seneca, La Cygne, Blue Rapids, Mound Ridge, Stafford, Mulvane, Frankfort, Oakley, Downs, Luray, Baldwin, Coldwater, Ellis, Mound City, Waverly, and Sylvan Grove.

**SEWERAGE AND SEWAGE DISPOSAL AND STREAM POLLUTION.**—Similarly, investigations and reports have been made or advice furnished with reference to sewage disposal or stream pollution or to city sewerage in the case of each of the following-named cities: Hutchinson, Hiawatha, Lawrence, Yates Center, Emporia, Lindsborg, Newton, Washington, Cherryvale, Osborne, Horton, Ellis, Dodge City, Oskaloosa, McPherson, Tonganoxi, Columbus, Syracuse, Larned, Mulvane, Grabham, and a number of schools and other public institutions.

Respectfully submitted.

W. C. HOAD, *Engineer.*

The secretary then read a letter from Dr. S. C. Emley, who presented his resignation, which is as follows:

LAWRENCE, KAN., June 5, 1911.

*To the Board of Health, Topeka, Kan.:*

DEAR SIRs—It is with much regret that circumstances render it necessary for me to give up my part of the great work the Board is doing for the people of this state. The work of the last year has been very congenial in the association and satisfactory in results.

I wish to express my appreciation of the consideration shown me by the members of the Board, collectively and individually, the wise guidance of Doctor Crumbine and the prompt and efficient coöperation of Mr. Deacon, through whose help and influence the State Exhibit has been brought to the appreciative attention of more than a quarter of a million people, with credit to your Board and with some benefit, at least, to the people.

Very truly yours,

S. C. EMLEY.

Two communications were then read, which were referred to the committee on food and drugs standards, for a report at the next quarterly meeting. One was from the Kansas Carlot Egg Shippers' Association, presenting the following resolution:

WHEREAS, it is detrimental to the interest of egg shippers and consumers that cold-storage eggs are sold as fresh eggs, both by wholesalers and retailers over this state, be it therefore,

*Resolved*, that the secretary of this Association communicate with Dr. S. J. Crumbine, secretary of the State Board of Health, urging the State Board of Health to take measures to eliminate this practice in this state.

In referring this letter to the committee on standards of foods and drugs, it is recommended that said committee prepare a rule which would require that all storage eggs should be properly labeled, declaring the fact that they were storage eggs.

The other communication was concerning street vendors of foods and drinks, as to what requirements, if any, the Board would insist should be made in order that the sanitary provisions of the food and drug law should be complied with. In referring this communication to the standards committee no recommendation was made.

The reports of the special committees appointed to inspect certain private schools of the state were presented without reading, and the secretary instructed to abstract these reports for presentation at the next quarterly meeting, and that copies of the same should be furnished to the heads of all of the institutions thus inspected.

A communication was then presented from President Waters of the Kansas State Agricultural College, inviting the Board to hold its next quarterly meeting at that institution. Upon motion the invitation was accepted and the secretary authorized to so inform President Waters.

The following accounts were audited and allowed:

Dr. C. E. Coburn .....	\$14.69
Dr. B. J. Alexander .....	17.18
Dr. O. D. Walker .....	18.34
Dr. M. F. Jarrett .....	18.85
Dr. V. C. Eddy .....	31.74
Dr. C. H. Lerrigo .....	6.58
Dr. C. B. Reynolds .....	13.68
Mr. Chas. D. Welch .....	21.90
Dr. H. L. Aldrich .....	23.13
Dr. J. A. Kimball .....	9.13
Dr. S. E. Greenfield .....	1.08

No further business appearing, the Board adjourned.

## SECRETARY'S REPORT.

## THE FIRST AND SECOND CONSOLIDATED QUARTERLY MEETING OF THE STATE BOARD OF HEALTH.

HELD AT MANHATTAN, KAN., OCTOBER 20, 21, 1911.

*Mr. President and Members of the State Board of Health:*

On the day following the annual meeting of the State Board of Health, namely, on Tuesday, June 13, 1911, the first summer school for physicians and health officers was formally opened, and the work began in the laboratories of the School of Medicine in Snow Hall, the school continuing throughout the week with increasing interest and attendance. Thirty-eight physicians were registered, five of whom were not health officers. The program as outlined in the advertising was carried out in full, and it was the unanimous opinion of all who took part in the program, and of those who attended the school, that the session was a success and should be continued annually hereafter.

## RABIES.

In accordance with the action of the State Board of Health taken at the annual meeting concerning the muzzling of dogs throughout the state for the prevention of rabies, I communicated the Board's request to Mr. J. H. Mercer, state sanitary live-stock commissioner, and received the following reply:

TOPEKA, June 22, 1911.

*"Dr. S. J. Crumbine, Statehouse, Topeka, Kan.:*

"DEAR SIR—On arriving in the office this date, I find your letter of the 19th inst., advising me of the action of the State Board of Health on June 12, with reference to the quarantining of the dogs of the state.

"I wish to advise that I consider this impractical, for the reason that it would be very expensive to this department to maintain a state-wide quarantine, and also would be of considerable expense to the different counties in carrying out a quarantine provision of this nature.

"I think the handling and controlling of infected dogs of communities can be more thoroughly taken care of by local quarantines, the same as we handle outbreaks of contagious diseases among other live stock in the state.

"I wish to assure you that I will take up with any community the advisability of quarantining either township or county, as the conditions might demand, wherever I have notice that rabies exists. If you will supply me with the information as to where rabies exists at the present time I will take charge of same at once.

Very respectfully, J. H. MERCER."

Subsequently Mr. Mercer was advised of all locations where rabies in animals existed and where people were bitten, and in several counties, I understand, the commissioner promulgated and established muzzling orders.

Upon arrangement with Professor Wm. K. Trimble, of the University Medical Hospital at Rosedale, plans were devised whereby the indigent patients were treated who had been bitten by supposedly rabid dogs, the Pasteur treatment as provided by the U. S. Public Health and Marine Hospital Service being utilized for that purpose. Since these arrangements were made five patients have thus been treated.

## ROLLER TOWEL.

As early as possible after the annual meeting publication was made in the official state paper of the order of the Board prohibiting the use of the common or roller towel in hotels, railway trains, railway stations and public and private schools on and after September 1, 1911. Notice was sent by registered mail to all the railroads doing business in this state, and assurance of prompt compliance on the date indicated was received from most of the railroads. Circular letters were also sent to the hotels in the state the names and addresses of which were available. Notice was given to State Superintendent Fairchild, with request that he, through the county superintendents, give notice to the various school boards of the state. Accordingly, on June 23, Superintendent Fairchild issued the following circular letter:

*Circular No. 241-F.*

"TO COUNTY SUPERINTENDENTS:

"TOPEKA, June 23, 1911.

"*My Dear County Superintendent*—At the request of Secretary Crum-  
bine I am sending herewith a recent order relative to the use of towels  
in hotels, public and private schools, etc. This order is in full effect at  
this time. As occasion offers kindly advise school boards and others  
interested.

"*Be it Ruled by the State Board of Health.*

"That the use of the common or roller towel in hotels, railway trains,  
railway stations, public and private schools is prohibited from and after  
September 1, 1911.

"No person or corporation shall place, furnish or keep in place in any  
hotel, railway train, railway station, public or private school, any towel  
for the common use, and no person or corporation shall permit in such  
place the use of the common towel.

"The term "common towel" as used herein shall be construed to mean  
roller towels and towels intended or available for common use by more  
than one person without being laundered after each such use.

Very truly yours,

E. T. FAIRCHILD,

*State Supt. Pub. Instruction."*

## MEETINGS ATTENDED.

On June 20 your secretary attended the meeting of the National  
Association for the Study and Prevention of Tuberculosis, at Denver, at  
which a most profitable day was spent. The two most interesting subjects  
that were discussed, in my judgment, were the relation of bovine tubercu-  
losis, to human tuberculosis, and the sociological study of tuberculosis in  
six Pennsylvania cities. The latter subject has developed certain plans  
that I desire to speak of later in this report.

On June 23 and 24 I attended the Annual Conference of the Surgeon-  
general with the State and Territorial Boards of Health at San Fran-  
cisco. The conference was well attended by the central and western states  
and by probably half of the health officers of the eastern states.  
Visits to quarantine station and emigrant island, with an inspection of  
the methods of the government in the handling of the great emigrant  
problem of the country, were exceedingly interesting. Upon our return  
to the city from these places we were taken to the plague laboratories,  
which occupy an entire block, enclosed by a concrete wall, in the western  
part of the city, where a most remarkable work is being done by the  
state of California and the city of San Francisco in conjunction with the  
federal government. For more than four years this work has been going  
on in the examination of from 1200 to 1500 rats and squirrels daily, in  
order not only to rid the community of these rodents but to find those  
that are infected. There is an effort now being made to completely  
surround the cities of Berkeley, Oakland and San Francisco with what is  
known as a "Squirrel-free zone," to be not less than ten miles in width.

A considerable number of squirrels that have been examined showed plague infection, and during the present year three cases of plague have occurred in the country districts of California, due to infection from the ground squirrel, the last case having occurred in San Joaquin county, September 18.

On June 30 and July 1 the National Conference of State and Provincial Boards of Health of North America was held at Los Angeles in conjunction with the meeting of the American Medical Association. Your secretary, who was chairman of the committee on publicity and board of health work, made a report of the methods utilized in Kansas, which report was ordered to be printed in the proceedings of the Association.

#### VITAL STATISTICS.

In accordance with the instructions of the State Board of Health, the law known as the vital statistics law was put into actual operation in August, and reports for the half of August and the first week in September indicate that the law is being reasonably well enforced, and in a more satisfactory manner than was anticipated. Much valuable data has already been secured, both from a sanitary and legal standpoint, and it is believed that with the coming months and years the utility of this division of the board of health work will grow in importance and value.

#### FOODS AND DRUGS.

The division of foods and drugs, under the assistant chief food and drug inspector, Mr. Tilford, is doing a good work, and reports that sanitary conditions of places where foods and drugs are prepared and sold are, in a general way, highly satisfactory throughout the state. A number of prosecutions have been made for keeping insanitary places, particularly in the case of meat markets and slaughterhouses, and several prosecutions have been made against dealers selling or offering for sale eggs that were unfit for food.

The reports of the large jobbers in eggs are to the effect that the general condition of Kansas eggs during the summer, notwithstanding the unusual season and the great heat, has been greatly improved over that of former years. This satisfactory condition is chiefly the result of the candling order of the Board, on which eggs are bought on a "loss off" basis, and partly as a result of educational work among the farmers in which they are taught to market their eggs more frequently in the warm weather.

The following circular was recently issued to the large jobbers, commission men and dealers in Kansas, which is self-explanatory:

"TOPEKA, KAN., October 9, 1911.

*"To Jobbers and Dealers of Kansas:*

"The season of the year has arrived when it may be expected that green oranges will be offered on the markets. Competition between the Florida and California growers to first supply the trade has led to the practice of cutting the oranges green, shipping to distributing points where they are put in warm rooms and steamed, which turns them a golden or ripe color, when they are offered for sale to the local dealers and through them to the unsuspecting public. Such processed oranges are unfit for food, as they often create acute stomach or bowel disturbances which sometimes are of a serious character. The flavor is poor and the pulp fiber soon becomes woody and dry. The department believes the sale of such products is prohibited under the Kansas food and drugs law and will contest the sale or offering of such for sale in this state.

"Your attention is also invited to the practice of coloring and polishing nuts, especially pecan nuts, which seems to be for the purpose of 'hiding inferiority' by giving the windfalls and unsound nuts the same color as the sound, full nuts, making them 'appear better than they really are,'

and deceiving the purchaser thereby. The department is of the belief that if nuts were polished by receiving a thin coat of paraffin without color it might not be objectionable, as such treatment seals the pores of the shell and therefore lengthens the life of the nut, but the coloring of nuts is only for fraudulent purposes. Recent investigations have shown that poisonous colors have in some instances been used, all of which emphasizes the necessity for prohibiting the further sale of colored nuts in this state; you are, therefore, advised that the sale of colored nuts is illegal.

"The season for ciders and fruit juices, both natural and imitation, is upon us, and your attention is invited to the standards for such products:

"*Diluted Fruit Juices.* A diluted fruit juice, such as lemonade and orangeade, is the expressed juice of the fruit corresponding to the name, together with potable water and cane sugar, without the addition of any coloring matter or flavor.

"*Imitation Diluted Fruit Juices.* An imitation diluted fruit juice is an uncolored solution, consisting of potable water, cane sugar, and of flavor and acidulous ingredients corresponding to the fruit imitated."

"Dealers will be held to strict account from this time on for violation of the above standards in the sale of this class of products.

Very truly yours, S. J. CRUMBINE,  
Chief Food and Drug Inspector."

#### STANDARDS AND RULES.

The committee on standards and rules have met and will submit their recommendations to the Board as a committee.

Recently the department, through the assistant chief food and drug inspector, filed complaint in the Sedgwick county courts against the notorious Professor Samuels, prince of fakers, who manufactures the so-called "Prof. Samuels' Treatment Through the Eye," which is composed chiefly of water, salt and sugar. This remarkable solution is used to treat some fifteen or more diseases, among which are tuberculosis and bright's disease. The remedy is applied by dropping the solution into the eye after first having separated the victim from his money. The professor expects to fight the case through the court of last resort, if necessary, and you may be assured that the food and drugs law will be as vigorously tested as to its constitutionality, together with the rules and regulations of the Board, as a shrewd grafter and his well-paid attorneys can devise.

At the Duluth meeting of the Association of State and National Food and Dairy Departments, the report of the committee on coöperation, of which your secretary was chairman, was adopted and ordered printed. If the plan as adopted by the Association is promulgated by the Department of Agriculture, it is believed that one of the greatest steps has been taken toward uniformity, coöperation and efficient enforcement of the food and drugs laws, and which will give more certain and quick results than have hitherto characterized the enforcement of these laws.

#### WATER AND SEWAGE.

Upon the request of the secretary, our engineer prepared an emergency plant for the hypochlorite treatment of domestic water supplies, to be used in cases of epidemics of typhoid fever due to a polluted city water supply. Immediately upon its completion the following circular letter was sent to health officers:

"STATE BOARD OF HEALTH,  
DIVISION OF WATER AND SEWAGE.

"To County and Municipal Health Officers:

July 12, 1912.

"The periodical prevalence of typhoid fever in certain cities using surface or river water as a source of their domestic water supply has been a source of continual concern to the Department of Health, and much thought and painstaking investigation has been given to the possi-

bilities of eliminating or reducing to a minimum the dangers of local communities from typhoid fever from this source.

"We are therefore pleased to announce that our engineer, Professor Wm. C. Hoad, has built a portable plant, that can be shipped to any place in the state, and within a few hours after arrival can be put into operation for the purification of contaminated water by what is known as the "hypochlorite treatment," which has been proven to be very effective, yet leaving the water in a pure and wholesome condition.

"The department will be glad to respond to the call of any health officer, where it is reasonably certain that typhoid fever exists by reason of a polluted city water supply. The only expense charged will be the freight and drayage on apparatus, and the cost of the hypochlorite of lime used.

Very truly yours,

S. J. CRUMBINE, M. D., *Secretary.*"

Thus far the plant has not been called for, although in one Kansas town steps are being taken to put in a hypochlorite plant for purifying the city water supply.

After several years' delay, the report of Mr. Horatio N. Parker, assistant hydrographer of the U. S. Geological Survey, who made a survey of the waters of Kansas in conjunction with the State Board of Health, has been printed by the government and is ready for distribution. It is suggested that the members of the Board avail themselves of this report, not only individually, but in recommending its use wherever necessary.

In compliance with the order of the State Board of Health, the National Oil Refinery at Coffeyville has built, at considerable expense, a plant for collecting their waste acids, thereby utilizing them again and providing for proper disposal of the sludge and oil wastes from the refinery. Thus a great industrial waste that hitherto was discharged into the Verdigris river, basely polluting the water and killing large numbers of fish, has been effectively prohibited by the Board's order. Similar plants are being built at Independence for the oil refinery and rubber plant at that place.

The city of El Dorado has thus far refused and neglected to comply with a former order of the State Board of Health to purify their sewage. This former order was based upon the fact that the city of Winfield secured its domestic water supply from the Walnut river, into which the sewage of the city of El Dorado was discharged. Since that time additional reasons have arisen why the city of El Dorado should be compelled to purify its sewage, in that the city of Augusta is about to establish a city water supply, and after having prospected in all the near-by localities for a ground-water supply, has been forced to go to the Walnut river for water that will give them a sufficient quantity to meet all purposes. It therefore becomes urgently necessary that the city of El Dorado be required to purify its sewage, and it is hereby recommended that the Board issue a new order to the city of El Dorado requiring them to purify their sewage on or before a definitely named date.

#### HOTEL INSPECTION.

There is nothing very interesting to report under the division of hotel inspection, excepting to say that the order of the Board prohibiting the use of the common roller towel is being fairly well observed throughout the state. Numerous devices have been resorted to by many of the more prominent hotels for evading the order, but as fast as the division locates these places, they are given to understand that the roller towel is a thing of the past in this state.

#### ANTITOXIN DIVISION.

The distribution of antitoxins, serums and vaccines continues, with a gradual increase in the utilization of these modern therapeutic measures by the physicians of the state.

A large number of antityphoid fever inoculation treatments have been

distributed, some eighty-odd inoculations having been made at the University recently, and offers have been made by the Board to furnish typhoid bacterins free to the other state institutions.

The splendid showing made of the utility of antityphoid inoculation at the recent army maneuvers in Texas seems to indicate that typhoid fever may be effectively controlled once the general public will take advantage of securing immunity by this means, as they have in securing immunity from smallpox. The day seems to be not far distant when the control of typhoid fever will be fairly well in hand.

#### ANTERIOR POLIOMYELITIS.

Fortunately for the children of the state, there have been but a comparatively few cases of anterior poliomyelitis occurring this season. On July 12 the following circular letter was issued to health officers:

*"To County and Municipal Health Officers:*

"At the annual meeting of the State Board of Health, held June 12, 1911, a regulation was unanimously adopted providing for an absolute quarantine in all cases of anterior poliomyelitis for a period of four weeks from the beginning of the acute symptoms of the disease.

"This action was taken upon the request of a joint committee of the American Orthopedic Association and the American Pediatric Society, which was sent to all state boards of health, and which recommendation is as follows:

"All cases of infantile paralysis should be strictly quarantined, sputum, urine and feces being disinfected, and the same rigid precautions being adopted as in scarlet fever. This quarantine should, in the opinion of the committee, last for four weeks in the absence of definite knowledge as to when the infection ends. Children from infected families should not be allowed to go to school until the quarantine is abandoned. It would be very desirable to adopt provisional quarantine measures in suspicious cases in a community where an epidemic prevails."

"It is strongly urged that all cases be effectively screened against the house-fly. Reports of new cases should be made by telegraph or long-distance phone. Very truly yours,

S. J. CRUMBINE, M. D., *Secretary.*"

Up to the present time there have been but fourteen cases in the state this year.

#### LEPROSY.

Two cases of leprosy have been discovered in Kansas this year. The first, the case of a Mexican laborer in Wichita; being an alien, there was no difficulty in securing his deportation to his native country. The other case occurred in a citizen of this state, a Mrs. Quint of Hays, Kan., the diagnosis being confirmed by a number of bacteriological examinations of the tissues of the patient, as well as the secretions from the nose. The county board of health of Ellis county has agreed to purchase a small farm and isolate the case in the country on a farm, providing a separate house for the patient and a near-by adjoining house for the husband and two children. It seems as if this would be the most humane as well as the most effective way of sufficient isolation, not only for the general public but the family as well. Just to what extent there may be other infected cases in her family, or the community, has not as yet been determined, although bacteriological examinations of the nasal secretions of the balance of the family are negative. It is well known, however, that the disease is very slow in manifesting itself clinically, so that it is impossible to determine as to whether or not there are other cases that are already infected.

It is my purpose to keep very close track of the family for the next few years, and I have arranged to take them to the University hospital for treatment upon the first signs of infection. Recent reports indicate

the possibility of cure by the use of lepra bacterins in early or incipient cases.

#### PELLAGRA.

Not only has the extensive heat of the past summer given rise to the suspicion that Kansas is more or less of a tropical country, but the advent of tropical diseases has emphasized that suspicion.

We have to report that since the last meeting of the Board there have been six cases of pellagra reported and two suspects, five of these cases having been confirmed by a number of physicians who were competent to judge of the nature of the disease. Of this number two have died up to the present time. The first two cases reported were from Oswego, and after the nature of the cases was fully determined I requested Professor Hunter, entomologist of the University, to make a study of the surroundings for the purpose of determining whether or not the sand fly—the insect which Sanbon declares is the medium of dissemination of the disease—existed in that locality. Accordingly Prof. Hunter, with an assistant, has made a thorough investigation and has found a large number of sand flies, with an extensive breeding place in a creek near where the family live. Traps over these breeding places have been erected, and experiments are being conducted with guinea pigs and monkeys in order to determine, if possible, what part, if any, the sand fly plays in the dissemination of the disease. One of the patients in question kindly loans her arm for the purpose of presumably inoculating the flies, which, in turn, are placed in cages with guinea pigs, and more recently with monkeys. Controls are used, by which the freshly hatched uninoculated flies are used in like manner. There seems to be a growing tendency among investigators to discredit the Sanbon theory, and to lean towards the nutritional theory of the disease, which may either go back to the maize theory, or to the more recent theory promulgated by a Georgia physician, in which he accuses the semi-drying oils, such as cottonseed oil or the benne oil as used in continental countries, to be the cause of the nutritional toxemias in which the clinical manifestations of pellagra are the visible marks.

#### SMALLPOX.

The summer season has brought to Topeka one of the most serious epidemics of smallpox that has visited the state since the State Board of Health was created. The disease first appeared on the east side of the city, in the usual mild type that has prevailed throughout the state for so many years. The first few cases were diagnosed as "chicken pox" by the attending physician, and thus no precautionary measures were instituted to prevent exposures until large numbers were exposed and the disease began to assume a more virulent type, when its true nature was discovered. The city board of health took prompt and vigorous measures for its suppression, but so many exposures had been made among large numbers of unvaccinated people that the result was a widespread epidemic, confined, however, to the east side of the city.

Altogether there have been 131 cases, of which number 21 died, making the mortality 16 per cent. At the present time there are five cases remaining in quarantine at the city detention hospital; all other cases, so far as known to this department, having recovered and been discharged from quarantine.

Several important medical facts worthy of record should here be noted: First, of the 21 who died, not a single one had ever been successfully vaccinated; of the 131 persons who had the disease, but four had ever been successfully vaccinated; one of these, a woman of 70 years had been vaccinated in her infancy; another had been vaccinated fifty years before, and the two others some thirty-odd years before. In no instance did any person contract the disease where a recent successful vaccination had been made. In several families the only person escaping in an entire family was the single vaccinated person in that family. Two cases were reported in which the patients had had a mild attack of

smallpox several years previously, which is additional proof to the statement your secretary has made on a number of occasions, that a recent successful vaccination will give a more certain immunity from smallpox than a mild form of the disease. The writer has observed, during the seven and a half years he has been secretary, a large number of cases where they have had this mild type of smallpox twice within from one to four years, but has never observed a single case of smallpox in a person that had been successfully vaccinated within two years.

The city board of health of Topeka deserves a great deal of credit for the vigorous and effective fashion in which they have handled the situation, which at one time seemed to threaten the entire city. They have ordered that all school children be required to show a certificate for a successful vaccination on and after the 23d of October, which it is believed is highly important, in view of the serious condition that has prevailed in the city hitherto.

On Friday, October 13, I was called to Winfield to assist in making a diagnosis in an epidemic of some eruptive disease which the city health officer declared was chicken pox but the attending physicians of the city believed to be smallpox. There was no question in establishing the fact that it is indeed smallpox. As a considerable number of cases are those of school children who had been sent from school while ill, it is thought wise to either close the public schools temporarily, or to require all pupils to be vaccinated or to show a certificate of successful vaccination, else be barred from the schools temporarily. Upon my suggestion, the city authorities chose the latter course, so that, beginning on the following Monday, the order was made effective, but the public schools can continue with those in attendance who have taken the precaution to secure immunity.

#### TUBERCULOSIS.

Owing to our inability to secure an opinion from the attorney-general's office concerning the use of our tuberculosis fund, this year's educational campaign has not yet been inaugurated. There remain but eight months of the current fiscal year, beginning November 1, and I would recommend to the Board that, in addition to a lecturer, we secure some suitable person for the purpose of making a very thorough and painstaking investigation and study of the tuberculosis cases that exist in the larger cities of this state, including a sociological and industrial survey, in an endeavor to determine the conditions that contribute to the dissemination of this disease in that particular locality. It seems to me that this is an exceedingly important work, and I was greatly impressed with the report of the sociological and industrial study of tuberculosis in the six Pennsylvania cities to which I alluded in the opening of this report. I therefore recommend that the Board authorize the secretary to employ a suitable person to carry out this plan.

The advisory commission of the state tuberculosis sanatorium is at work studying the question of a suitable location for that institution. It is hoped that within another twelve months the state may be able to properly care for her uncared-for advanced cases, and at least afford the proper treatment and care for a limited number of incipient cases.

The compulsory notification and registration of tuberculosis law has not yet been as efficiently complied with as is possible, but following the policy of the Board to gradually, by persuasion and educational methods, bring about a full compliance with the law the following circular letter was issued to health officers:

"JULY 12, 1911.

*"To County and Municipal Health Officers:*

"The compulsory notification and registration of tuberculosis law has been in force for two years, but I regret to say is not being enforced by many of the health officers as it should be.

"May I request that you very carefully re-read the entire law, in order that you may thoroughly familiarize yourself with its require-

ments; and then may I ask that you join with us in a vigorous campaign for its literal and complete enforcement. It is suggested that you issue a circular letter to the doctors of your jurisdiction, offering to supply them with the necessary blanks, and requesting their coöperation in this means of tuberculosis control. All reports received by you should be immediately registered, and the original reports forwarded to this office without delay.

"Prophylactic supplies will be furnished to all registered cases in which the tubercle bacilli has been demonstrated, when requisitioned upon the regular form.

"After the vital statistics law becomes operative, all deaths from tuberculosis will be carefully checked, and if no report has been made in each case, complaint will be filed with the county attorney against the physician who failed to report the same. There will be no favors shown. We are desperately in earnest in the matter.

Very truly yours, S. J. CRUMBINE, M. D.,  
Secretary."

The increased number of reports would seem to indicate that this letter had a wholesome effect.

#### THE UNIVERSITY MEDICAL HOSPITAL.

On next Monday, October 23, the new University Medical Hospital at Rosedale will be opened to receive patients, in accordance with the provisions of the laws passed by the last legislature. The state and local boards of health have a distinct and material connection with the University in the enforcement of these laws, and it is our hope that the sanitary organization of the state may be greatly strengthened, and that the uncared-for poor of the state may be suitably provided with skilled and up-to-date care and treatment, and thus not only a new weapon be placed in our hands for the cure and prevention of disease, but the good name of our state be preserved, in that proper provision has been made for the care of her unfortunates.

#### ASIATIC CHOLERA.

The condition during July as to the possibility of cholera getting a foothold in this country was so grave that I issued the following circular letter to county and municipal health officers:

*"To County and Municipal Health Officers:*

"JULY 15, 1911.

"For the past year the Public Health and Marine Service has taken extraordinary measures to prevent cholera from being introduced into this country from infected foreign ports. A number of cases have developed on shipboard, and a number of cases have developed in quarantine.

"The possibility of the 'bacillus carriers' was recognized, and as a precautionary measure, the Immigration Service has been sending immigrant destination slips to the state health officer, of all immigrants whose destination was in his state, in order that surveillance might be exercised in all such cases. In Kansas these slips have been sent to the respective county health officers with a request that should the immigrant show any symptoms of sickness that samples of the feces be immediately forwarded to the state laboratory for examination for the cholera bacillus.

"At last the expected has happened, and two probable 'bacillus carriers' have gone through the quarantine station, landed on American soil, and later developed the disease and died, as indicated in the public health reports of July 7, 1911.

"Some thirty-odd cases have appeared in the Hawaiian Islands, thus more or less threatening our western coast; so that the situation is not without danger.

"This information is addressed to you that you may exercise the ut-

most diligence in locating, as far as possible, all immigrants arriving from infected ports whose slips are sent you; and that careful surveillance be exercised over these cases through local physicians or city officials, where the person is not in your own city or community.

Very truly yours, S. J. CRUMBINE, M. D.,  
*Secretary.*

*"Post Script:*

*"MONDAY, July 17, 1911.*

*"Since writing the above, our statement concerning the gravity of the cholera situation has been strikingly confirmed by the Associated Press reporting a death of an American in New York from the disease, and this morning's information is to the effect that there are fifteen cases and four suspects in Swinburne Hospital, New York.*

*"All this does not prove that cholera will appear in Kansas, but it does indicate possibilities, particularly in 'carrier' cases.*

*"The people of Kansas are relying on Kansas health officers to be on the alert, that we may not be caught unawares.*

Very truly yours, S. J. CRUMBINE, M. D.,  
*Secretary."*

On September 25 I received a telegram from Marion county to the effect that there was a suspected case of cholera in a recently arrived emigrant from an infected port. A request to Washington by wire for cholera agglutinating serum somewhat stirred the surgeon-general, and he immediately ordered Dr. McLaughlin, past surgeon of the United States Public Health and Marine Hospital Service, who was temporarily located at Chicago, to report to Topeka at once. Dr. McLaughlin arrived the following morning, and after several days of painstaking bacteriological examination it was concluded that the case was not a case of cholera.

#### GENERAL.

The outlook for the future, so far as the department's work is concerned, is hopeful. Each succeeding year adds to the amount as well as to the kind of work the department is called upon to do. While there have been no more preventable diseases prevalent during the past year than is commonly prevalent, yet the secretary finds less and less time to devote to epidemiological work. Oftentimes it is absolutely necessary for a thorough and painstaking investigation concerning the origin and dissemination of certain infectious diseases, particularly that of typhoid fever, where a trained man might, with very great profit to the community, spend a week or two in such work, but the Board is quite fully aware of the impossibility of the secretary devoting such time to this important work. I therefore desire to call the Board's attention to the necessity, which has existed for some time, and which will be more and more apparent as the days go by, of having as a part of the Board's staff a medical inspector who can devote his time to this very important and necessary work. The leading and progressive state boards of the country have long since had such a person on their regular working force, and I therefore recommend that the Kansas State Board of Health, by resolution, request that the next legislature provide the necessary salary and funds for a trained physician, or sanitarian, to carry on this phase of the department's work.

Respectfully submitted. S. J. CRUMBINE, M. D., *Secretary.*

## SECRETARY'S REPORT.

THE THIRD QUARTERLY MEETING OF THE STATE  
BOARD OF HEALTH.HELD AT THE OFFICE OF THE SECRETARY, IN THE STATEHOUSE,  
JANUARY 30, 31, 1912.

On Monday night, November 20, 1911, in the city of Washington, Surgeon-general Wyman died after a brief illness. Doctor Wyman was a little past 63 years of age; he had been in the Marine Hospital Service since 1876, having been surgeon-general since 1902; his funeral was held in the city of St. Louis, November 24, at which place a representative of this department, Dr. Charles H. Lerrigo, was present. Doctor Lerrigo will undoubtedly give a personal report of his mission. Doctor Wyman was a man of strong personality, and under his masterful direction the work of the Public Health and Marine Hospital Service was brought to a high state of efficiency. Probably the most signal service rendered to the country through Doctor Wyman's organization was the eradication of the plague from the Pacific Coast, which was the most thorough and successful that has ever been made in the history of the world.

The surgeon in immediate charge, Dr. Robert Blue, has shown by his splendid services his fitness to succeed Doctor Wyman as surgeon-general. At all events, the President seemed to think so, as it has been unofficially announced that Doctor Blue would be the next surgeon-general of the United States Public Health and Marine Hospital Service.

## DIVISION OF WATER AND SEWAGE.

In accordance with the direction of the Board at the last quarterly meeting, the order to the city of El Dorado was submitted to the attorney-general for his opinion, which has been given, and is to the effect that the order was not sufficiently definite and clearly stated as to insure a successful prosecution in bringing action against the city. He therefore recommended that a new order be drawn up and passed upon by the Board at this meeting, which will later be presented under unfinished business.

In this connection, I desire also to invite the Board's attention to the fact that the time set by the Board in its order given to the city of Hutchinson, wherein it was requested that that city take steps to insure the purification of the city's sewage, or to divert it from its present outflow into Cow creek, expired on January 1, 1912, and the city has not complied with the order. It is therefore recommended that the Board request the attorney-general to bring suit against the city of Hutchinson for the enforcement of this order, in accordance with the provisions of the law.

On November 24, 1911, the following letter was sent to the acting surgeon-general, which letter is self-explanatory of the subject matter treated:

"TOPEKA, KAN., November 24, 1911.

"Acting Surgeon-general, U. S. Public Health and Marine Hospital Service, Washington, D. C.:

"DEAR DOCTOR—Some time ago Hon. W. R. Stubbs, governor of Kansas, appointed a commission of three, consisting of the engineer for the State Board of Health, Prof. Wm. C. Hoad, the bacteriologist of the University, Prof. F. H. Billings, and the writer, to join with like commissions from the states of Missouri, Nebraska, Iowa and North Dakota for the purpose of a study of the sanitary conditions of the Mis-

souri river, an interstate stream bordering on the aforesaid states. Up to the present time the governors of these states have not appointed their commissions, but the Kansas commission believes that the study should be undertaken independently rather than have the matter go by default, and therefore makes the request that you duly detail a competent man to join with the Kansas commission in a thorough and sanitary study of the Missouri river.

"Kindly advise me at your earliest convenience if our request can be granted.

"Bacteriological and chemical examinations of such samples of water as may be desired to be taken can be done at the University of Kansas.

Very truly yours, S. J. CRUMBINE, M. D., *Secretary.*"

To this letter the following reply was received:

"WASHINGTON, November 29, 1911.

"*Dr. S. J. Crumbine, Secretary State Board of Health, Topeka, Kan.:*

"DEAR DOCTOR—The bureau is in receipt of your letter of the 24th instant relative to a proposed study of the sanitary conditions of the Missouri river, and requesting the assignment of an officer to cooperate with the commission appointed by the governor of Kansas to undertake the above-mentioned studies. It is the desire to cooperate in matters of this kind, since they have an important bearing on the spread of contagious and infectious diseases in interstate traffic. The shortness of officers at the present time makes it necessary to inquire when it is proposed to start the investigations mentioned, and whether, on account of weather conditions, the studies would probably not be undertaken until the early spring.

"On receipt of a reply from you the matter will be further taken up in order to see what can be done to assist your Board.

Respectfully, A. H. GLENNAN, *Acting Surgeon-general.*"

It is expected that as soon as the weather becomes settled in the spring the Kansas commission, jointly with a representative of the Public Health and Marine Hospital Service, will undertake a sanitary survey of the Missouri river.

The details of this division's work will be submitted by the engineer.

#### DIVISION OF FOOD AND DRUGS.

Under the cooperative agreement between the states and between the federal government and the several states, the department issued its first confidential circular letter on November 9, 1911, which was sent to all other state food and drug officials in the United States. This letter is as follows:

#### "Circular No. 1.

"STATE BOARD OF HEALTH, DIVISION OF FOOD AND DRUGS,  
November 9, 1911.

"In accordance with the recommendation of the committee on co-operation, the following information is herewith submitted:

"1. An extended investigation by Prof. C. C. Young and Mr. N. P. Sherwood, of the water laboratories of the State Board of Health at the University of Kansas, on the effect of certain bacteria when carbonated under pressure, the same conditions prevailing in which soft drinks are prepared, discloses the fact that the statements which have at times appeared in literature to the effect that carbon dioxide under pressure markedly reduces the number of bacteria in water was not borne out by the experiments conducted.

"These experiments were carried on with water inoculated with *Bacillus typhosus*, *Bacillus coli communis* and *Bacillus prodigiosus*, and bottled with and without syrup and flavoring material, similar to the methods pursued in ordinary sodawater or pop-bottling establishments.

"The water was carbonated at 18 pounds pressure and at 10 degrees

C. and capped. Cultures were taken from these bottles after 4 hours, after 28 hours, after 80 hours and after 244 hours, and while the number of virulent bacteria was reduced in the longer periods of time, yet growing cultures were obtained from all the bottles up to 244 hours.

"From these observations it is manifest that manufacturers should not depend upon contaminated or polluted water for the manufacture of soft drinks under the supposition that the carbon dioxide under pressure will kill such bacteria. Water used for the purpose should be of known purity.

"2. At a recent meeting of the State Board of Health the regulations of the food and drugs law were amended in several important particulars, as follows:

"*Regulation 5, Paragraph b.* Proprietary medicinal preparations and similar medicinal products are required to conform in composition to the freshly prepared nondeteriorated article, and to conform to the claims made for the preparation as to therapeutic properties, quality and strength.

"*Regulation 11, Paragraph d.* (New paragraph.) In the case of eggs from cold storage of more than two weeks, or which have been packed in any preserving substance, the wholesale or retail package, when delivered to the purchaser, shall bear a label designating such storage or preservation.

"*Regulation 14, Paragraph 3.* Vinegars artificially colored, or made from materials specially chosen to impart a color similar to that of cider vinegar, are held to be imitations of cider vinegar, unless *each package, wholesale and retail, as delivered to the purchaser, is distinctly marked by a label which states the true nature of the article.*

"*Regulation 15, Paragraph e.* Descriptive matter upon the label shall be free from any statement, design or device regarding the article, or its therapeutic properties, or the ingredients or substances contained therein, or quality thereof, or place of origin which is false or misleading in any particular. In the case of materials used in the preparation of foods or medicinal preparations, descriptive matter upon the label shall be free from any false or misleading statement in regard to the composition or ingredients of the food or therapeutic properties of the medicinal product.

"*Regulation 36, Paragraph 3.* An article or substance which is designated as 'germicide' or 'disinfectant' in the state of Kansas will be held to be of such a character that it will actually kill any nonspore-bearing bacterium within six hours under the conditions prescribed for its use. If directions for use are not expressly stated, those conditions usually found in living rooms will be assumed for its application.

"The terms 'germicide' and 'disinfectant' are used interchangeably to mean substances that actually destroy, and not merely inhibit the growth, of bacteria.

"3. An analysis of Professor Samuels' treatment through the eye discloses the fact that this fake nostrum is essentially composed of a solution of salt and sugar. It is claimed that by dropping this solution into the eye it will cure consumption, heart disease, hay fever, morphine habit, catarrh, kidney trouble, eczema, fits and spasms, cataract, constipation, granulated eyes, blindness, bladder trouble, palsy, rheumatism, bright's disease, bronchitis, stomach trouble, diabetes, liver trouble, gall stones, deafness, asthma, goitre, tumor, nervousness, dropsy and neuralgia.

"*Draw your own conclusions!*

Very truly yours,

S. J. CRUMBINE, M. D.,

Chief Food and Drug Inspector."

On December 11, 1911, circular letter No. 2 was issued, which is as follows:

*"Circular No. 2.*

*"STATE BOARD OF HEALTH,  
December 11, 1911.*

*"TO STATE FOOD AND DRUG OFFICIALS:*

"Inasmuch as the Association of State and National Food and Dairy Departments has on a number of occasions recommended that the office of food and drug control officials be removed from politics, and that appointments for commissioners be based upon merit alone, the chairman of the committee on coöperation, speaking only for himself, is of the belief that such action will be more quickly and more certainly brought about by each commissioner first taking his own department out of politics and having the appointments of inspectors made on a basis of merit rather than on political faith.

"The division of food and drugs of the Kansas State Board of Health some time ago recognized this principle, and recently held an examination to fill a vacancy in the drug-inspection force. Believing this to be in the nature of advanced legislation, and the practical way to bring about the elimination of politics from the food and drug control work, the examination questions used at the recent examination are herewith submitted for the information of commissioners.

"It might be of interest to add that out of the eight applicants two made a passing grade of 70. The highest-grade man is appointed and the other one passing is put on the eligible list for appointment within one year should a vacancy occur. After this time new examinations are required.  
Respectfully submitted.

S. J. CRUMBINE, M. D., *Chairman.*"

Many letters of appreciation have been received from other state food and drug control officials, and it is believed that the committee's plan will prove most valuable.

The examination for filling the vacancy of drug inspector was held in the office of the Secretary on December 1 and 2. The following call was published in the daily press, which constituted the notice to applicants:

*"Examination for State Drug Inspector.*

"The Kansas food and drugs law requires that appointments of food and drug inspectors shall be based upon a competitive examination. There being a vacancy in the drug-inspection force, an examination will therefore be held for the position of drug inspector on December 1 and 2 at the office of the secretary of the State Board of Health in Topeka.

"Candidates for the examination should forward their names and addresses to the secretary, Dr. S. J. Crumbine, Topeka, Kan., stating their experience in drug work, if graduates of any school of pharmacy, from what school and the date of graduation, and such personal references as to their character and ability as they desire to present.

"The age limit for this position is confined to ages between 25 and 40 years.

"The appointment to this position will be made by the State Board of Health and selection made from among those who pass the examination."

The result of the examination and the report of the committee are herewith submitted:

"DECEMBER 8, 1911.

"The Kansas State Board of Health, Dr. B. J. Alexander, President,  
Hiawatha, Kan.:

"GENTLEMEN—Your committee that was appointed to conduct an examination for a drug inspector beg leave to report that they conducted an examination for this purpose on December 1 and 2, 1911, and have carefully examined the papers of the eight candidates who presented themselves for the examination, with reference to the following points: Spelling; arithmetic; drugs, practical questions; foods, practical questions; pharmacy, practical questions; penmanship; letter-writing; oral examination on sanitation.

"They find that there are two candidates who have a passing grade, which is over 70, namely, the one marked No. 12, who has a grade of 80.03; and No. 5, who has a grade of 81.94. They respectfully recommend the appointment to this position of the candidate No. 5, who has a grade of 81.94.

"They further recommend that No. 12 be placed on the eligible list for the appointment as inspector of this department, in case a vacancy should occur within one year from date.

Respectfully submitted.

S. J. CRUMBINE, M. D.,  
E. H. S. BAILEY,  
L. E. SAYRE,  
J. T. WILLARD,  
Committee."

On December 9 the following circular letter was sent to dealers in eggs:

"TO THE DEALERS IN EGGS:

"DECEMBER 9, 1911.

"GENTLEMEN—At a regular meeting of the State Board of Health held October 21, 1911, the following regulation, known as paragraph d, regulation 11, for the enforcement of the food and drugs law, was unanimously adopted, and was published in the official state paper November 11, 1911:

"Regulation 11 (d). In the case of eggs from cold storage of more than two weeks, or which have been packed in any preserving substance, the wholesale or retail package, when delivered to the purchaser, shall bear a label designating such storage or preservation."

"The attention of the department has been called to the fact that during this time of the year a large number of eggs are 'held' but are not kept in cold storage, and a proper label for such goods is requested. A tentative regulation is therefore made, 'that such eggs, held under proper conditions of storage and temperature for more than two weeks during

the months of December, January and February, shall be labeled on both the wholesale and retail packages, as 'held eggs.' Eggs that are held at any other season of the year would be subject to the same rules of candling and 'loss off' as current-receipt eggs are held.

"This is to advise you that the above regulations are effective at this date.

Yours very truly,

S. J. CRUMBINE, M. D.,  
*Chief Food and Drug Inspector."*

It appears to be the unanimous expression of egg dealers that the condition of the Kansas egg the past season, notwithstanding the intense heat of the midsummer, has been better than at any other season in our experience, all of which seems to justify the action of the Board in requiring eggs to be candled, and lends encouragement to the belief that we are on the right road to eventually solving in a sane and fairly effective fashion the problem of the rotten egg.

The long-continued cold weather of December and early January has made an abundant ice crop throughout the state, and letters have come to the department in great numbers asking our opinion as to whether or not ice could be harvested from rivers, creeks and ponds to be used for the refrigerating of food products. On the other hand, many letters of complaint and opposition have been received, opposing the storage and use of ice from supposedly polluted water. The department's decision in this matter is based upon the experiments conducted by Park on the Croton aqueduct water and the New York State Board of Health on the Hudson river water—which experiments seemed to be practically in agreement—to the effect that polluted water, after it has been frozen for three months or over, is essentially sterile. The New York State Board, using their own experiments as a basis of regulation, has added a month to the period of storage as a margin of safety, after which they permit the use of the Hudson river water which has been harvested below the city of Albany and contains untreated sewage from that city, but the ice from which has been shown to be sterile after three months' freezing. It may be of interest to quote from Park's experiments as follows:

"In these experiments 21 flasks were filled from the Croton aqueduct (in New York) and each inoculated with a different strain of typhoid bacilli. In one a little of the feces rich in typhoid were directly added. The infected water in each flask was then pipetted into thirty tubes. These tubes were placed in a cold-storage room in which the temperature varied between 20° and 28° F. At first tubes were removed and tested twice a week, later once a week. At the end of five weeks, water infected with six cultures was sterile. At the end of sixteen weeks only six strains remained alive. His figures are: After 5 weeks, 0.1 per cent alive; after 9 weeks, 0.005 per cent; after 16 weeks, 0.004 per cent; after 22 weeks, none alive."

Some time ago I asked Mr. Deem, our drug inspector, as to whether or not the sale of the acetanilid compounds, such as headache preparations, bromoselzer, etc., was increasing in the state to such an extent as would lead one to believe that many people are forming the acetanilid habit. His report is to the effect that there has been a marked increase in the sale of these products pretty generally throughout the state during the past few years, and that many druggists do not hesitate to offer the opinion that they have customers who buy these preparations with great regularity and in such amounts as to lead to the undoubted conclusion that they are addicted to the acetanilid habit. This impels me to venture a recommendation that a committee of the Board be appointed to make further investigation of this subject and to report their findings at a subsequent meeting of the Board, together with a recommendation for such legislation as the condition would seem to warrant. So far as your secretary is concerned, he is now led to make a recommendation that the sale of acetanilid be restricted to physicians' prescriptions, the same as is required in the sale of cocaine or morphine.

The latter part of October the Board of Food and Drug Inspection at Washington submitted tentative food inspection decisions on vinegar and maraschino cherries, requesting the department's opinion concerning the proposed decisions. After consultation with the standards committee, the following letter was sent to the Board expressing the views of this department:

"TOPEKA, KAN., November 13, 1911.

"Dr. Harvey W. Wiley, Chairman, Board of Food and Drug Inspection,  
Washington, D. C.:

"DEAR DOCTOR WILEY—I am inclosing herewith comments of Professor Bailey, food analyst for the State Board of Health at Kansas University, Lawrence, also a letter from Professor Willard, food analyst for the State Board of Health, Agricultural College, Manhattan, relative to the proposed standards on maraschino cherries and vinegar.

"You will notice that they are both in accord with the standard for maraschino cherries.

"I desire to say that I agree with both Professor Bailey and Professor Willard in their objections offered to the dilution of vinegars and, for my own part, I disagree with the proposed standard on imitation vinegar which permits such vinegar to consist in whole or in part of dilute acetic acid, with added coloring and flavoring.

"I am also in further agreement with the food analysts in voicing the sentiment that Kansas will not join the federal government in its proposed standards on vinegars if they are adopted as herewith presented. We very much desire to have our standards and our regulations in uniformity with the government's, but we are of the opinion that we can not consistently, in view of the nature of our laws on the subject, go as far as the proposed standards would go. It seems to me an exceedingly dangerous proposition to open up the doors on dilute vinegars, for in my judgment it would mean the practical ruination of the apple cider vinegar business, at least so far as the farmer's product is concerned, as competition would probably force the dilution of apple cider vinegars with the commercially cheaper although equally meritorious product of distilled vinegar, which could be sold at such a low price as to make the manufacture of apple cider vinegar commercially unprofitable.

Very truly yours, S. J. CRUMBINE, M. D.,

*Chief Food and Drug Inspector."*

On December 2 the following letter was sent to the manufacturers of mincemeat in Kansas:

"TOPEKA, KAN., December 2, 1911.

"GENTLEMEN—Tentative standards on mincemeat have been submitted to this department by the government with request that any suggestions which might differ from the contemplated government standards should be submitted with briefs in support of such differences.

"Inasmuch as the manufacture of mincemeat is a large industry in Kansas, the department would be glad to hold a hearing on the subject under the supervision of the committee on standards of the division of food and drugs, which will be held in the office of the chief food and drug inspector at Topeka on December 8, at 10 A. M.

"It is the desire of the department to follow as nearly as possible the federal government in the matter of food standards, which will be done in this case unless there are sufficient reasons to the contrary that would justify the Kansas department in making different standards.

Very truly yours,

S. J. CRUMBINE, M. D.,

*Chief Food and Drug Inspector."*

After the hearing of the manufacturers with the standards committee, the following letter was sent to the Board of Food and Drug Inspection,

conveying the opinion of the department as recommended by your committee on standards:

"TOPEKA, KAN., December 8, 1911.

"Board of Food and Drug Inspection, Dr. H. W. Wiley, Chairman, Washington, D. C.:

"GENTLEMEN—Replying to your circular letter of the 21st, concerning the tentative standard for mincemeat, will say, that after consultation with Professors Bailey, Willard and Sayre, analysts for this department, and after hearing the opinions of a number of manufacturers of mincemeat in this state, we beg to express the opinion that the standard include the ingredient of glucose among other ingredients that may be used without special designation upon the label.

"We are also of the unanimous agreement that starch is not a normal constituent of mincemeat, and should therefore not be permitted to be an ingredient thereof, either with or without special designation.

Very truly yours, (Signed) S. J. CRUMBINE, M. D.,  
Chief Food and Drug Inspector."

Mr. Floyd Tilford, the assistant chief food and drug inspector, will give a detailed report of the operation of the division of foods and drugs for 1911. His report, I am sure, will show a gratifying condition of the work, and I feel that the efficiency the department has attained is a matter of congratulation to the State Board of Health.

#### DIVISION OF VITAL STATISTICS.

On January 10 the following confidential circular letter was sent to certain selected men and women of the state, which letter is self-explanatory:

Personal and confidential.

"JANUARY 10, 1912.

DEAR SIR—Through the operation of the vital statistics law some very valuable information is being collected and some very startling sociological facts presented, which hitherto were unknown or only suspected.

"The State Department of Health is desirous of utilizing this data in such a way and manner as may be of the greatest benefit in the correction, if possible, of certain social evils. Ordinarily, vital statistics are used only for recording the movement of population, for locating the foci of infectious diseases, for the study of occupation and location on morbidity and mortality, and for legal purposes. We believe that a broader interpretation should be given to such valuable data, and that it should be utilized for the betterment of social conditions, if possible. However, we are uncertain how to proceed and also uncertain as to the methods to employ as a reasonable working basis, and therefore propose to call a conference of certain representative men and women of the state to meet with the State Board of Health on January 30, at the office of the secretary, in the statehouse, at two P. M.

"The following questions, on which we desire your valuable opinion, are suggested for discussion:

"1. (a) Should the number of illegitimate births be published monthly in the Bulletin or given to the daily press? (b) Would such procedure have a deterrent effect on illicit intercourse? (c) Would it give *Kansas* undesirable advertising without compensating benefit?

"2. (a) Should the department insist on complete and literal enforcement of the law in demanding the name of the father of an illegitimate child, so it might be made a matter of permanent record? (b) Could the statement of the mother, if forced to make a statement, be relied on as being true? (c) Do the rights of the child demand that an effort be made to name the father? (d) Should the law be invoked in case of failure?

"3. (a) Should the number of cases of death from abortion and miscarriage in the unmarried be published? (b) Should the number of such cases in the married be published. (c) Should an investigation be made as to whether or not a crime had been committed in suspected cases?

"4. (a) Should publicity be given to an increasing number of suicides? (b) Should the method of 'suicide route' be stated? (c) What part does 'suggestion' play with the morbid, unbalanced or temporarily insane person who contemplates suicide?

"5. (a) Should publicity be given to deaths from industrial accidents, giving name and location of industry? (b) Would the public be likely or able to discriminate between unavoidable accidents and those due to neglect or carelessness of employer or employee? (c) In case of death from avoidable accident, what course should be pursued?

"6. (a) Should deaths from venereal disease be published? (b) Should the department undertake the publication and distribution of a pamphlet on 'Sex Hygiene'? (c) If so, what method of distribution would you suggest?

"7. If publicity is desirable and advised in any or all of these things, what methods should be pursued?

"The department expresses the hope that everyone invited to the conference may be able to come and feel free to take part in the discussion.

Very truly yours,

S. J. CRUMBINE, M. D., *Secretary.*"

"To: His Excellency, W. R. Stubbs, governor, Lawrence.  
 Prof. E. T. Fairchild, state superintendent public instruction, Ellsworth.  
 Hon. F. D. Coburn, secretary State Agricultural Society, Topeka.  
 Prof. F. W. Blackmar, sociologist, Kansas University, Lawrence.  
 Prof. D. M. Flak, sociologist, Washburn, Topeka.  
 Prof. W. A. McKeever, sociologist, K. S. A. C., Manhattan.  
 Mr. Frank T. McLennan, publicist, *Journal*, Topeka.  
 Mr. Harold Chase, publicist, *Capital*, Topeka.  
 Mr. W. Y. Morgan, publicist, *News*, Hutchinson.  
 Mr. W. A. White, publicist, *Gazette*, Emporia.  
 Mr. R. E. Stout, publicist, *Star*, Kansas City, Mo.  
 Rev. S. S. Estey, minister, Topeka.  
 Rev. C. M. Sheldon, minister, Topeka.  
 Rev. Father F. M. Hayden, priest, Topeka.  
 Judge J. C. Ruppenthal, district judge, Russell.  
 Mrs. Julia Perry, Girls' Industrial School, Beloit.  
 Mrs. M. D. Atkinson, president State Federation of Women's Clubs, Parsons.  
 Mrs. J. A. Unternaher, matron Crittenton Home, Topeka.  
 Mrs. Lee Monroe, president City Federation of Women's Clubs, Topeka.  
 Warden J. K. Coddling, State Penitentiary, Lansing.  
 Dr. J. T. Axtell, president State Medical Society, Newton.  
 Dr. Chas. Huffman, secretary State Medical Society, Columbus.  
 Dr. L. L. Uhla, superintendent State Hospital, Osawatimie.  
 Dr. T. C. Biddle, superintendent State Hospital, Topeka.  
 Mr. Horace Hall, business man, Topeka.  
 Mr. M. B. Williams, farmer, Winona.  
 Mr. H. W. Charles, Boys' Industrial School, Topeka.  
 Dr. Cressy L. Wilbur, statistician, Bureau of the Census, Washington, D. C., and the members of the State Board of Health."

The result of this conference speaks for itself, and will be reported in full at the annual meeting, together with such other matters as are related thereto.

The head of the division will give a detailed report of the work thus far accomplished, which promises to be most valuable indeed.

#### DIVISION OF COMMUNICABLE DISEASES.

In accordance with the approval of the Board at the last quarterly meeting, to secure one or more expert men to carry on the anti-tuberculosis work, I have secured the services of Dr. Leo Haughey as lecturer and Mr. John Wylie as assistant. The work is now being carried on in the smaller towns of the state that had not hitherto been visited, the exhibit not now being taken on the road for display; thus more towns are visited and I believe more effective work is being accomplished.

The following towns have been visited since the beginning of this year's work (to February 1, 1912):

De Soto, Alta Vista, Eudora, Dwight, Perry, Lost Springs, Lecompton, Hope, Maplehill, Gypsum, Lindsborg, Haviand, Marquette, Preston,

Kanopolis, Turon, Chapman, Partridge, Niles, Sylvia, Bennington, St. John, Delphos, Macksville, Glasco, Belpre, Glen Elder, Whiting, Cawker City, Muscotah, White City, Netawaka, Valley Center, Goff, Sedgwick, Corning, Halstead, Centralia, Burrton, Vermillion, Nickerson, Irving, Ellinwood, Waterville, Little River, Barnes, Galva, Linn, Canton, Randall, Hillsboro, Jewell, Mullinville, Burr Oak.

Doctor Haughey reports a large attendance and enthusiastic interest, notably among the teachers and school children. The record of attendance shows that persons have heard the doctor's lectures and seen the moving pictures and stereopticon views which were nightly displayed.

We also were fortunate in securing the services of Dr. John J. Sippy, county health officer of Sumner county, who started in working for the department under the title of epidemiologist for the Board. He has completed a very thorough social and industrial study of tuberculosis in the cities of Wichita and Hutchinson, and is now working in Kansas City, Kan. In addition to this, he has made a study of typhoid fever in the city of Hutchinson, where there were an unusual number of cases the past summer. Doctor Sippy's final report from the city of Wichita indicates that there have been 106 cases of tuberculosis in that city from July 1, 1909 (the date of the notification law), to January 14, 1912; the number of deaths among reported cases, 46; the number of deaths among unreported cases, 44; the number of cases having left the city and state, 18; number of cases having left the city, still in the state, 3; number of cases known to be living in the city at the present time, 27; number of cases in the city but which could not be found, 8; total, 35. Number of cases interviewed and data taken, 6. We have accurate detailed reports covering 32 living cases of tuberculosis in the city of Wichita at the present time. These reports cover, first, the personal medical history of the case; second, the home conditions; third, the housing conditions; fourth, the general working conditions; and fifth, the other members of the family. These conditions are herewith outlined by filing with this report a blank which has been adopted in gathering this information. The average age of all cases in Wichita is 32 years, 2 months, 6 days; average age of deaths, 34 years, 5 months and 4 days; average age of patients living, 33 years, 10 months, 6½ days. Of cases reported, 98 are white, 4 negro, 4 Mexican. Of all deaths, 80 were white, 6 negro, and four Mexican. In addition to this work, Doctor Sippy has accomplished the following in Wichita, which things have also been taken up in each other city visited:

#### *Additional Items Accomplished.*

"1. The consideration and probable passage by the city commission of a new building code to prevent the congestion of population under improper housing conditions.

"2. Coöperation of city registrar and city health officer whereby all deaths from contagious diseases, but more particularly tuberculosis and typhoid fever, which are often not previously reported, are reported promptly to city health officer, and thus no infected houses escape thorough disinfection.

"3. The disinfection of several houses which had escaped attention of city health officer, particularly the house at 1955 S. Lawrence street, wherein had developed four cases of tuberculosis in four years.

"4. Thorough instruction of every case interviewed, and furnishing of supplies to such as seemed in urgent need of same (some twelve requisitions having been made), and the placing of each case in touch with the local and state boards of health.

"5. The distribution of some 500 pamphlets to employees in department stores, and the enlistment of the sympathy of their managers and employers in the fight against tuberculosis.

"6. A report previously furnished on general insanitary housing conditions of Mexican employees of various railroads, and on the need for improvement.

"7. The promotion of a general better understanding between the

physicians (some 150 in number) and the city registrar on the requirements of the vital statistics law.

"8. The promotion of a greater interest by physicians in the work of the State Board of Health, and the enlistment of much support for new and needed legislation to aid the latter in its work. Am satisfied that much is to be expected from the Sedgwick county profession along this line.

"9. The reaching of the conclusion, on which action either by the State Board of Health or by legislation is very imperative, that some means should be taken to protect the various laborers in trades from dust irritation to which they are subjected in carrying on their trades. More particularly should laundry workers be protected from contagion in the handling of infected clothing, by a thorough method of the disinfection of all laundry immediately on its entrance to the buildings from the wagons which collected it.

JOHN J. SIPPY, *Epidemiologist.*"

It can be seen, therefore, that his services are valuable not only as an epidemiologist, but also in representing the department in the various phases of its activity in the department's relation to the physicians and the sanitary organizations of the state.

During the course of investigation Doctor Sippy discovered a case of tuberculosis, in a box car on the railroad right of way containing ten other persons—windowless, unventilated, and in such an insanitary condition as would undoubtedly bring about the ultimate infection of every person contained therein. I asked him to make a very detailed survey of the housing conditions upon the railroad rights of way in the city of Wichita, which was done, and submitted to the department on December 30, and is herewith appended as a portion of this report:

## HOUSING CONDITIONS ON RAILROAD RIGHTS OF WAY, WICHITA, KAN.—CONCLUDED.

BUILDING AND STREET NUMBER.	Occupants.			No. wage earners...	Income.		Rent.	Sanitation.	Remarks.

\*Mexicans working for A. T. &amp; S. F.

*Summary of Preceding Table.*

Total number occupants of buildings, 103.  
 Total number apartments, 28; rented, 18; free, 10.  
 Total amount cubic space, 49,118; average per person, 477 cubic feet.  
 Total amount floor area, 6282; average per person, 61 square feet.  
 Total amount window area, 242 square feet or 4 per cent of floor area.  
 Total amount rent paid, \$53—an average of \$3 each on rented houses, or \$2 on all apartments free and rented, or 51½ cents per occupant per month.  
 Total number employed, 50 men, 1 woman.  
 Total wages per working day, \$63—an average of \$1.26 per day.  
 Total income per month of 20 working days, \$1260, or an average per person of \$12.23.

This revealed such an appalling and dangerous condition that I was constrained to send the following letter to the general managers of the Santa Fe and Rock Island railways:

"JANUARY 13, 1912.

"Mr. C. W. Kouns, General Manager Santa Fe Rly. Co., Topeka, Kan.:

"DEAR SIR—I am inclosing herewith a copy of report of a social and sanitary survey made in Wichita on the railroad rights of way of the Santa Fe and Rock Island railways covering, as you will see, the housing conditions of Mexican laborers employed on these two railway systems. This inspection was made by the epidemiologist of the State Board of Health, Dr. John J. Sippy, under the direction of this department, and, I think you will agree with me, discloses a condition as to crowding, lack of air space, lighting and ventilation, filthy surroundings with inadequate or no toilet or water facilities, which not only is a menace to the health of the people living in these places, but a *foci* of infection which is of greater or less danger to the entire community, and which should not be permitted to exist.

"Doctor Sippy in his notes declares that the living conditions are really much worse than can be indicated by a mere chart of the gathered data, as members of families make no admission of having roomers or boarders, which information, from other sources, indicates that there are a number of such living, at least in part, in these rooms and shacks, which are in addition to the members tabulated in the report. To quote his own words:

"To look at the bare facts and figures does not do justice in the way of description. I wrote you of finding eleven people in one box car, one of whom—a woman—was a tubercular patient, and four of whom were little children playing about on the floor of the dark, windowless and fetid, unventilated room, where cooking, dining and sleeping conditions were all one. The woman died on the 27th inst., and on yesterday's inspection I found the car deserted and the inhabitants scattered throughout the rest of the camp.

"You will note that I found almost as bad a condition yesterday in finding two box cars, one of which, with only eight square feet of window area (and these were tightly closed), contained ten men, while the other, with only three square feet of window area (also closed), had five men, two women and three children.

"Sanitary conditions are unspeakable! I found only five toilets, and these of the common earth open-vault type, filthy beyond description. These five vaults are used by the whole population, both floating and stationary. In the case of the old store room, the entire twenty-six people and all of their visiting friends use the same privy. The water supply is from driven pipe wells with pumps (common pitcher type), and the yards around them reek with filth of every description."

"The doctor continues in the report, and says that he found but one well-lighted house that was in any way well kept. He declares that most

of the places are so dark that it is found necessary to burn oil lamps for lighting constantly.

"The State Board of Health is aware that these people naturally have very low standards of living, and yet we are of the belief, which Doctor Sippy's further investigation seemed to prove, that other Mexican laborers who live in decent houses about the city are not only better housed and better provided with water and sewage facilities, but that the houses themselves are kept in better sanitary condition. In other words, if these people are permitted or required to live in places that are really fit for human habitation they will more nearly approach the standards of American living, but they certainly never can do anything for themselves so long as the railroad companies apparently make no effort to give them decent facilities or proper housing in which it is possible for them to do much better than they are now able to do.

"The department is inclined to the belief that the railroad companies are chiefly responsible, if not entirely, for their presence in the state, which everyone recognizes has been a necessity; but with that recognition we are almost inclined to fix the responsibility on the railroads for the inhuman conditions in which they are permitted to live, where such conditions are found upon railroad rights of way. Furthermore, we are of the belief that the management can not certainly be aware of the actual facts, which are doubtless similar throughout the state where these people are crowded together; and we feel quite sure that, now that the matter has been thus definitely and specifically brought to your attention, that it will receive your earnest thought and consideration and that decent housing and proper facilities will be afforded them, if you desire them to live upon the right of way, or that the pest-houses of infection be abolished and they be required to look after their own places of residence the same as other laborers. I presume that permission has been given to this class of laborers to utilize places of this sort on the ground of the company's desire to help them, but we have found that this present plan has built up such a dangerous community life from a sanitary standpoint as to be intolerable. Moreover, it appears to me that in many instances the pollution of box cars, concerning which grocers and other shippers of merchandise complain so bitterly, must be due, in part at least, to these people who are not provided with sanitary conveniences. Frankly, I do not know that such is the case, but it would seem to be inevitable that box cars standing upon the sidetracks would be utilized for such purposes during the daytime in the absence of toilet facilities.

"I would be very glad indeed to have your company make a very thorough investigation and survey of all of your Mexican laborers' camps located on your right of way in this state, and I am very certain that conditions will be revealed which will be so repugnant to your sense of justice and decency as to cause the immediate setting of plans on foot for the betterment of these conditions. May we be assured of an early investigation and your report and conclusions as to what can be done in the matter?

Very truly yours,  
(Signed) S. J. CRUMBINE, M. D., *Secretary.*"

Reply has been received from the Santa Fe Railway Company, which is herewith submitted:

"TOPEKA, January 16, 1912.

"Dr. S. J. Crumbine, Secretary, State Board of Health, Topeka, Kan.:

"DEAR SIR—Replying to your letter of January 13, with reference to sanitary conditions and surroundings of the Mexican track laborers employed by this company: I will make immediate investigation of such conditions and will advise you of the result thereof.

Yours truly,  
(Signed) C. W. KOUNS, *General Manager.*"

In addition to all of this splendid work by Doctor Sippy, he called on every physician doing business in the city, and got into personal and vital touch with him by explaining somewhat in detail the nature and

operation and the reasons for the various health laws, and personally provided each physician with report blanks, making a note of the time and date when these blanks were given. This was for the express purpose of hereafter enforcing the notification law, as the law specifically provides that blanks shall be furnished, and the department now has evidence that the blanks have been properly furnished and due notice has been given.

A survey of the cases of tuberculosis in Hutchinson, indicated in Doctor Sippy's report, is as follows:

Total number of deaths not previously reported, 8.

Total number of cases reported, 29.

Total number of deaths among reported cases, 7.

Total number recovered, 1.

Total number left city and state, 5.

Total number still in the city and county, 16.

Average age of cases, 33 years, 7 months, 13 days.

Average age of deaths, 36 years, 1 month, 17 days.

Average age of living cases, 36 years, 9 months, 7 days.

Number of cases visited and reported, 8.

Number of doctors visited and instructed as to the requirements of the vital statistics and antituberculosis laws, 36.

Undertakers and the secretary of the Cemetery Association were also visited and instructed as to the proper method of filing death certificates. In like manner blanks were left with every physician visited.

It is worthy of note that in both Hutchinson and Wichita a large number of cases left the city and state; namely, 18 in Wichita and 5 in Hutchinson—a total of 23, or about 5% per cent of the total number of cases reported in these two cities. The old idea of sending patients away from home for treatment still prevails to a considerable extent. Indeed, many of these cases were in the advanced stages of the disease, and met the pathetic, and I might say "tragic," fate that thousands do from all over the United States, to the disgrace and shame of the profession who send them away from their homes!

On December 19 Doctor Sippy was requested to go to Neosho Falls to investigate a continued epidemic of smallpox, which apparently little effort was being made by the local authorities to control. The State Normal School at Emporia was thrown into a panic by a student coming down with the disease who had been exposed in the depot at Neosho Falls. The result of Doctor Sippy's visit, in conjunction with a threat from this office that the city would be put in quarantine unless the local authorities took serious hold of the situation in accordance with the law, was effectual, and at the present time the epidemic has been abated.

#### ANTERIOR POLIOMYELITIS.

One of the surprises of the cold weather has not been the low pressure of gas, as that was to be expected, but the continuation of isolated cases of anterior poliomyelitis being reported, there having been four cases reported thus far in January, while three cases were reported in December.

#### PELLAGRA.

One effect of the cold weather seems to have been an arrest of any further spread of pellagra; at all events, no cases have been reported since our last report was made. Thus far there have been eight known cases of the disease, with two deaths and at least two suspects. There can scarcely be any doubt but what with the advent of the warm weather and bright sunshine of the spring new cases will arise in what is presumably the infected district of the state.

## GENERAL.

The general health conditions throughout the state since the last quarterly meeting have been highly satisfactory, no unusual or virulent epidemics having come to our notice. Much more might be accomplished in the investigation of disease epidemics had we adequate funds at our command, and the work of Doctor Sippy simply emphasizes the statement which I made at the last quarterly meeting of the absolute necessity of the Board having a trained epidemiologist on its staff to investigate epidemics of diseases and conditions that favor the dissemination of the same.

Following the custom which has prevailed for several years, the following circular letter was issued to boards of county commissioners:

"JANUARY 4, 1912.

"Hon. Board of County Commissioners, The County Board of Health: .

"GENTLEMEN—I desire to invite your attention to section 8033 of the Revised Statutes of 1909, which provides that the preference for the election of your health officer shall be given to an 'adept in sanitary science.' This means that the practice of some boards in appointing this important officer on the basis of competitive bids, and thereby making a selection in accordance with the provision of the statute, is both illegal and impossible.

"It is quite apparent that the lowest bidder is more likely to be one who is the least qualified to meet the requirements of the law, rather than the physician who is the best fitted by knowledge and experience to fill the most important office in the county. The hope is expressed that appointments will always be made in the spirit as well as the letter of the statute.

"I also desire to call your attention to the provisions of chapters 292, 293 and 294, Laws of 1911, which provide for the hospital care and treatment of certain classes of cases of the county poor at the Bell Memorial (University) Hospital, Rosedale. Blanks for admission and further information will be furnished upon application.

Very truly yours,

S. J. CRUMBINE, M. D., *Secretary.*"

I am glad to say that in a number of instances, at least, health officers have been selected with the view of securing the best man for the place, while salaries have been increased to a considerable extent.

"Respectfully submitted.

S. J. CRUMBINE, M. D., *Secretary.*"

## SECRETARY'S REPORT.

## ANNUAL MEETING OF THE STATE BOARD OF HEALTH.

HELD IN THE OFFICE OF THE SECRETARY, IN THE STATEHOUSE,  
JUNE 6 AND 7, 1912.

MR. PRESIDENT AND MEMBERS OF THE STATE BOARD OF HEALTH—The end of the present fiscal year completes my eighth year of service as secretary for the State Board of Health, having been a member of the Board for six years previous thereto.

In looking over the progress that has been made in the work of the department during the past eight years, it is a matter of considerable gratification to the secretary, at least, and I believe to the entire Board, to note the forward strides the department has made in so brief a space of time in building up a sanitary organization which for effectiveness and efficiency is, perhaps, without a parallel in the country, length of time considered.

I trust the Board may pardon any personal allusions, but it seems highly appropriate to briefly review the development of this department during this period of years. When your secretary assumed the duties of the office the working force consisted of one stenographer and himself. What little was then undertaken, under the provisions of our inadequate laws, on an average consumed from one to two hours a day, the secretary thus having most of his time to engage in private practice; indeed, should his practice be of a particularly urgent nature, he could without hurt to the Board's work absent himself a number of days from the office. The laws then on the statute book simply required him to have general supervision over the reports of contagious diseases and to issue an annual report to the governor. Quarterly reports were required of the health officers throughout the state. Many of these reports were never made, which fact, together with the length of time of the entire quarter for their making, made them of no worth or value. Taken all together, the work of the department was very much of a farce, with no special laws to enforce outside of the quarantine law, with no appropriations of sufficient amounts to undertake any special work, and with no available force by which any unusual work might be accomplished. Compare those conditions with the situation of to-day—a most rigid and far-reaching water and sewage law, one of the best food and drug laws in the United States, an efficient vital statistics law; tuberculosis legislation, embracing compulsory reports, statewide educational campaigns, and, finally, a tuberculosis sanatorium; the distribution of free antitoxins, a weights and measures law, hotel supervision, and a large number of minor sanitary enactments giving the State Board of Health ample authority in almost every phase of public hygiene and sanitation.

This progress would seem to indicate that we have had the support of the people in the work of the department, which in a general way, is true; yet we have encountered many obstacles, chief of which is the dead-weight indifference of the average person in matters of public hygiene and sanitation. There has also been more or less active opposition, and it is to be expected that from this time forward such opposition will rather increase than diminish, for it is but natural that in the enforcement of law those who come in contact with the penalties of the law are resentful and usually take every opportunity to obstruct or impede the work of that particular department.

Perhaps one of the most notable changes in public health work is the

new idea concerning the dissemination of disease. Formerly, boards of health were chiefly concerned with places and environment as the medium of distribution of contagious diseases; the new idea is that the individual is chiefly the carrier of infectious disease, and so our chief concern is in finding the afflicted persons, or the carriers of micro-organisms, all of which means greater emphasis being placed upon the utilization of well-known scientific measures rather than futile attempts to discover fomites, miasms, or other indefinite conditions or things.

This new idea in our public health work leads me to recommend, first of all, as I have done on a former occasion, that the time has now come when it is absolutely necessary for the State Board of Health to have at its command an epidemiologist, whose business will be to make careful and searching study of epidemics of diseases, finding the cause and, if possible, the individual that is the occasion of an epidemic in any community; for when that is once determined the proper procedure as to the employment of preventive measures is clearly indicated.

#### COMMUNICABLE DISEASES.

Dr. John J. Sippy has been temporarily filling the place of epidemiologist for the Board, and has about finished the social and industrial survey of tuberculosis in the ten cities of the first class. I have requested him to make a tentative report of his work to the Board in person, which later on will be carefully tabulated, digested, and published in a future issue of the BULLETIN.

The housing and social conditions found in several of our larger cities were nothing short of appalling, and in Kansas City, Kan., tuberculosis parallels in morbidity and mortality any other prevalent communicable disease that exists to-day. During Doctor Sippy's seven weeks' stay in Kansas City 24 people died from tuberculosis, which, together with the large number of living cases, certainly warrants the assertion that tuberculosis is epidemic in the metropolis of Kansas. The fact that the doctor found a number of cases of tuberculosis among the chicken pickers of a certain packing plant, and also that during March of this year five employees of a packing industry of that city, and in April three others, died of tuberculosis, seems to be sufficient warrant for the institution of ways and means for making an early discovery of this disease among those who handle food products. Accordingly a letter was addressed to all the packing houses in Kansas, which in substance is as follows:

"TOPEKA, KAN., April 27, 1912.

"GENTLEMEN—I notice in the death returns from Kansas City, Kan., for the month of March the death of four packing house men from tuberculosis.

"Will you kindly indicate to this department what ways or means, if any, you have of determining whether or not your employees, particularly those handling meat products, are free from tuberculosis or other infectious diseases? Are they examined at regular intervals? Has there been any systematic effort made towards locating cases of incipient tuberculosis? Would you be willing to issue an order requiring that a pains-taking examination be made of your employees by giving the tuberculin test, or other means for determining the exact number of tuberculosis cases in your employ.

"There is no question in my mind but what a considerable number will be discovered, as, for illustration, our epidemiologist discovered five cases among chicken pickers of a certain packing plant last month.

"Your early reply to these questions will be highly appreciated.

Yours very truly,

S. J. CRUMBINE, M. D., *Secretary.*"

Replies to these letters have been received from most of the packers, but up to the present time no definite program has been decided upon. I respectfully recommend that the action of the secretary in this matter

be indorsed, and that the packing establishments of the state be required to put into operation some reasonable yet effective means for the discovery of all cases of communicable diseases in their establishments.

I believe I mentioned in my last annual report the occurrence of an epidemic of what was then supposed to be ptomaine poisoning near Peabody, but which later proved to be, in addition to the ptomaine poisoning, an explosion of typhoid fever. It develops that a Mrs. Dohner, who prepared the pressed chicken for a missionary luncheon, of which 25 of the 26 people present partook, was a typhoid carrier; that eight years previous she had had typhoid fever, and a year following had been operated on for gallstones, the operation resulting in a permanent fistula from which was discharged large quantities of mucus and bile. All of the persons partaking of the pressed chicken were afflicted with typhoid fever, the only person escaping being the one who did not eat any of it. A large number of secondary cases of typhoid fever came down in the families of those afflicted, which, together with the tabulation of cases of typhoid occurring in her own family and in the families of neighbors for the eight preceding years—which cases were undoubtedly infected by this carrier through food or water supplies—makes the astonishing total of 76 cases.

Dr. J. O. First, formerly living at Peabody but now of Los Angeles, Cal., told me last July, when I was in attendance at the meeting of the A. M. A., that he believed this typhoid outbreak at Peabody was occasioned by infection from this woman, giving me the history of her operation and the fact that she had this biliary fistula, and also the observation that typhoid fever had occurred every year in her neighborhood during all of these years; that while he really had not thought much about it during this time, yet with the increased knowledge of the method of dissemination of typhoid fever gained during the last few years, he concluded after having left his Kansas home that Mrs. Dohner must be the carrier. Accordingly, on my return home I asked Dr. E. H. Johnson to submit samples from the biliary fistula to this department for examination, on which the bacteriologist reported in the affirmative. Subsequently samples were sent to five other bacteriologists, two of which gave positive reports and three negative. We were accordingly considerably in the dark as to what to believe, whereupon I submitted a sample to the Hygienic Laboratories of the Public Health and Marine Hospital Service of the United States, at Washington, and received the following letter from the director, Dr. John F. Anderson:

"MARCH 14, 1912.

"Dr. S. J. Crumbine, Secretary State Board of Health, Topeka, Kan.:

"DEAR DOCTOR CRUMBINE—With further reference to your letter of March 5, transmitting a sample of bile and also a sample of blood from Mrs. Dohner, of Peabody, Kan., who is suspected of being a typhoid carrier, I have to say that the sample of bile was plated out on differential culture media and from the bile we isolated the typhoid bacillus. The colon bacillus was also found present as a contaminating organism.

"The typhoid bacillus gave all the cultural reactions for this organism, and in addition was agglutinated by a specific serum in a dilution of over 1:10,000. There can, therefore, be no doubt that the bile from Mrs. Dohner contains the typhoid bacillus. This being the case, there is good reason to suspect that she also passes bacilli in her feces.

"On account of the positive result of the bile it was not found necessary to test the blood, as it would have given no additional information.

"It would seem that Mrs. Dohner is a distinct menace to those with whom she may come in contact if she is allowed to have anything to do with the preparation and distribution of food for the consumption of others.

"This fistula is a distinct source of danger on account of the very great liability for her hands and clothing to become soiled with the bile containing the typhoid bacilli.

"I shall be pleased at any time to examine any further specimens from you. This case seems to be a very interesting one and I hope you will report it in the literature.

Very truly yours, JOHN F. ANDERSON,  
*Director Hygienic Laboratory."*

Mrs. Dohner has since been operated on for a biliary fistula by Doctor Axtell, at Newton, which was a complete success, and it is our intention in a short time to secure samples of the urine and feces to determine whether or not she is throwing off the typhoid bacillus, the result of which I will report to the Board at a later date.

On May 1 the following letter was sent to the mayor of every incorporated city in Kansas, inclosing a model antily ordinance, copy of which is also shown:

*"To the Mayor and Commissioners:*

*"TOPEKA, May 1, 1912.*

"GENTLEMEN—I am inclosing herewith a copy of a suggested ordinance for the purpose of putting the house fly out of business in Kansas. If we can prevent them from breeding the necessity for "swatting" them will be eliminated. Probably 90 per cent of house flies are hatched in horse manure and outside closets; it is obvious, therefore, that if the manure heap is screened, or, better still, is removed at least once every ten days (the time of the life cycle of its transformation from the egg to the fly), and all outside toilets made fly-proof, there will be 90 per cent less flies in your community.

"The part that flies play in the transmission of typhoid fever, tuberculosis, dysentery and intestinal diseases of childhood is so well proven as to need no further comment, but should stimulate every effort that can reasonably be made to protect the health and comfort of our people.

"The department expresses the hope that you may join with us in the work of human conservation by the adoption and rigid enforcement of the ordinance.

Very truly yours, S. J. CRUMBINE, M. D., *Secretary."*

*"An Ordinance to Protect the Public Health and Public Comfort and Providing Penalties.*

"WHEREAS, it is commonly known that flies are very dangerous carriers of filth, filth poisons and disease germs, that they are born in filth and are a constant menace against the health, happiness and comfort of the people; therefore,

"SECTION 1. Be it ordained by the mayor and council of the city of ———, that it shall be unlawful for any person, firm or corporation to create or to place upon their premises, whether owned or leased by them, or to place on any street, alley or common any one or more of the following, to wit: (1) Animal manure, in any quantity, which is not securely protected from flies; (2) privies, vaults, cesspools, pits or like places which are not securely protected from flies; (3) garbage, in any quantity, which is not securely protected from flies; (4) trash, litter, rags or anything whatsoever in which flies may breed or multiply; provided, that between the first day of April and the first day of November, each year, where manure or garbage is not securely protected from flies, such manure or garbage is required to be removed at least once every ten days and destroyed by burning, burying or scattering over a field for fertilizer.

"SEC. 2. It shall be the duty of the chief of police or city marshal and health officer, upon learning, in any way whatsoever, of the existence of one or more of the unlawful conditions described in section 1 of this ordinance, to notify the offender in writing, upon blanks provided by the city clerk, to remove or abate said unlawful conditions, stating the shortest reasonable time for such removal or abatement. In the event of the refusal or neglect on the part of the notified offender to obey such order, the chief of police, marshal or health officer shall file complaint

with the proper city authorities for the enforcement of the law and the collection of the penalties prescribed by section 3.

"SEC. 3. Any person, firm or corporation found guilty of having created or placed on premises either owned or leased by them, or upon any public or private property, any one or more of the unlawful conditions named in section 1 of this ordinance, shall be punished by a fine of not less than five or more than fifty dollars.

"SEC. 4. All ordinances or parts of ordinances in conflict with this ordinance are hereby repealed. This ordinance shall be in effect upon publication in the official city paper."

On May 19 I visited Caney, in response to a notification from Dr. H. L. Aldrich, a member of this Board, that he had a case of pellagra, the first to be reported this year. An examination of the patient, together with the clinical history, leaves no doubt in my mind as to the correctness of the diagnosis.

Prof. S. J. Hunter, entomologist at the University, who last year conducted experiments on the so-called "sand fly" or "Sanbon" theory of the cause of pellagra, was notified of this case, with request that he make an investigation to determine whether or not the sand fly was prevalent in or near the creek which runs through Caney, and near which the patient of Doctor Aldrich lives. Six monkeys have been purchased and turned over to Professor Hunter for carrying on his experiments, and artificial breeding places have been made in the laboratories at Lawrence for the cultivation of sand flies and a minute and detailed study made of their history, habits, etc.

During the past year there have been two severe epidemics of communicable diseases; the first, that of a severe epidemic of smallpox occurring in the city of Topeka, which was reported somewhat in detail at a former meeting; the second, an epidemic of cerebrospinal meningitis in Kansas City, with the disease occurring in endemic form at various places throughout central and eastern Kansas. All together there were in the neighborhood of two hundred cases in the state, with a mortality approaching 65 per cent.

The department has expended money in the distribution of free anti-meningitis serum, and at one time had the only available supply west of Chicago. During the past year the department has expended about \$1200 for the free distribution of diphtheritic antitoxin, tetanus antitoxin, antimeningitis serum and the various bacterins and tuberculins, chiefly the typhoid bacterin, and we are of the belief that great good has been accomplished, both therapeutically and in the control of epidemics by the use of these products for immunizing purposes.

#### WATER AND SEWAGE.

The division of water and sewage for the past year has accomplished a large volume of most important work. Our engineer, Professor Hoad, and his able assistant, Mr. Haskins, have devoted most of their time during the past year to this division of the Board's work.

I am sure that every member of the Board will sincerely regret to hear of Professor Hoad's resignation as engineer for this department and as professor of engineering at the University of Kansas, for his place will be difficult to fill, not only because of his splendid qualifications and his untiring industry and high ideals, but also because he is now most intimately familiar with the water and sewage conditions of the entire state, which knowledge is, of course, of very great value, both to me and the department; yet I am sure we will rejoice in his good fortune, which comes to him in increased salary and probably increased opportunities of usefulness in his new field of work in Michigan. Personally the secretary feels incapable of expressing himself, for he appreciates, perhaps more fully than any other, the quality and value of Professor Hoad's work as engineer, and especially does he appreciate his cordial coopera-

tion in the work as joint executives, and will always treasure with most pleasant recollections the many enjoyable visits we have had together traveling about over the state in the performance of our official duties. To make use of a trite and well-worn expression, "What is Kansas' loss is Michigan's gain"; and the Kansas State Board of Health bids him "God speed" in his new field of labor. The engineer will make a personal and detailed report of the work of that division.

In accordance with the instructions of the Board at the last meeting, on February 17 the following circular letter was sent to all the superintendents of city waterworks in the state:

*"To Superintendents of Waterworks:*

**"FEBRUARY 17, 1912.**

DEAR SIR—At a meeting of the State Board of Health held October 20, 21, 1911, a resolution was unanimously adopted which requires that both a sanitary analysis and a bacteriological examination of all water supplies be made at some time during the year 1912, such examinations and analysis to be made at the water laboratories of the State Board of Health at the University of Kansas, Lawrence, Kan.

"Containers will be sent for shipping samples upon application direct to Prof. C. C. Young, Chemist, State Water Survey, Lawrence, Kan.

Very truly yours, S. J. CRUMBINE, M. D., *Secretary.*"

As indicated in my last report, concerning the proposed survey of the Missouri river by the Kansas commission in conjunction with the U. S. Public Health and Marine Hospital Service, I am glad to state that Dr. A. J. McLaughlin, past assistant surgeon of the U. S. Public Health and Marine Hospital Service, has been detailed by the surgeon-general, together with an assistant, Dr. John S. Boggus, to make a sanitary survey of the Missouri river from the Dakotas to its mouth. This work is now under way, and will be featured as a joint work between Kansas and the federal government. Much valuable data will be secured, which must sooner or later result in adequate protection from the increasing pollution of the Missouri river, which is now being used as a source of water supply by a million and a half of people living on its banks.

#### FOODS AND DRUGS.

The work of the division of food and drugs has continued in about the same manner as usual, that division being now under the supervision of the assistant chief food and drug inspector, Mr. Tilford, who will make a personal report to the Board, giving the details of the work of that division.

The food and drug standards committee held a meeting in the office of the secretary on Wednesday, May 29, at which representatives from the Wholesale Grocers' Association were present. The committee will make its report under the heading of "Committee Reports."

It having come to the department's attention that certain wholesale grocery houses in the state were in the habit of selling swelled canned goods to hucksters, bakers and others, who in turn sold or utilized them for food purposes, the department thought best to issue a general circular letter of warning protesting against such practice. Accordingly, on April 8 the following circular letter was issued and sent to each wholesale grocer in the state and to wholesale grocers doing business in Kansas City and St. Joseph:

**"APRIL 8, 1912.**

**"TO WHOLESALE GROCERS:** It has recently come to the notice of the department that swelled canned goods are being sold by certain wholesale interests to hucksters and bakers. While we do not believe this custom is general among the wholesale dealers, yet we are constrained to make this statement: that the department will contest such practice where it may come to our notice in the future.

"I desire to also request that you be very sure that all measures or measuring devices be accurate before selling to retail trade.

"May we also announce that this department is not concerned in the recent order from other sources prohibiting the sale of poison fly paper, our only interest being in the destruction of the house fly and the protection of food products from contamination from these pests.

Very truly yours, S. J. CRUMBINE, M. D.,  
Chief Food and Drug Inspector."

It will, no doubt, be of interest to the Board to learn that the plan of the committee on coöperation of the State and National Association of Food and Drug Control Officials has been duly promulgated by the Department of Agriculture, and thus the dreams of the chairman of the committee, your secretary, have been realized. It is hoped and believed that this plan will greatly simplify and thus greatly add to the efficiency of food and drug control work, not only in the enforcement of the national law, but in the enforcement of the various state food and drug laws.

The subdivision of hotel inspection will be fully reported by Mr. Tilford, who is in immediate charge of that work, but I desire at this time to again give expression to my belief that the enforcement of the hotel law should be placed in the hands of the state labor commissioner, who has charge of all other public buildings under the general factory inspection law.

#### ANTITOXIN DIVISION.

The number of doses of antitoxin distributed free from this office during the past year is 203. Estimating the mortality from diphtheria without the use of antitoxin and the reduced mortality where antitoxin is used, which has been very definitely worked out, both in this country and abroad, we arrive at the conclusion that the distribution of free antitoxin this past year has saved 186 lives.

It should be noted, also, that the department was able to make arrangements with the Dr. H. M. Alexander Co., whereby an enormous sum of money will be saved to the people of this state in the reduced cost of antitoxin that is purchased on the market, to say nothing about the reduced wholesale cost to the state. Formerly the following prices were charged for diphtheritic antitoxin (which are the uniform prices charged by all manufacturers), as compared with present prices:

No. 1, 1,000 units, former price .....	\$2.00
present price .....	.70
No. 3, 3,000 units, former price .....	5.00
present price .....	1.60
No. 5, 5,000 units, former price .....	7.50
present price .....	2.50

It naturally follows that other manufacturers will be forced to meet these prices or to suspend business in this state, for diphtheritic antitoxin is standardized by the federal government, and is therefore practically all alike. Just how much money the reduction in the price of diphtheritic antitoxin, brought about by this department, will save the people of this state is difficult to estimate, as the quantity sold is not known, but it is believed that it will amount to several hundred thousand dollars per annum.

It might not be improper to remark at this time, as in my former report, that the objection occasionally raised as to the cost of maintaining this department is certainly without foundation, as the above is but one of numerous illustrations of the great economic value of this department to the consumers of this state, not only in the actual saving of money, but what is of infinitely greater importance, in being a factor, as we believe, in preventing sickness and saving life.

## PUBLICITY AND EDUCATION.

The three years' state-wide educational campaign against tuberculosis conducted by the State Board of Health in this state is about drawing to a close. During this time every city of the first and second class and most of the cities of the third class have been visited by our traveling lecturer, and in all the larger cities with the exhibit. The number of people who have heard the lectures and seen the exhibit, including school children who have heard one or more lectures, is close to half a million. Just the amount of good we have been able to accomplish is, of course, beyond the power of any one to estimate—only the recording angel may, in the days that are to come, be able to tabulate that information.

Much of the Board's literature, consisting of bulletins and pamphlets, have been distributed through this channel. Stereopticon and moving pictures have been freely utilized, while the popular "Almanac" has been added to the Board's educational armamentarium. Last of all, the popular postcard has been utilized for the same purpose.

Properly prepared newspaper and magazine articles have been given to the press from time to time, and through this means of publicity a wide-spread educational propaganda has been carried on most successfully. More and more sanitarians are becoming convinced that their chief and greatest work lies in the direction of educating the people in personal and public hygiene. Certain it is that prevention is the only solution of the control and suppression of communicable diseases, and we have long ago found out that the whole matter of quarantine, or the erection of legal barriers to the advance of disease, does not, as a matter of fact, actually control the disease.

Doctor Haughey has been asked to give a report of his year's work, which I am sure will be found very instructive and interesting.

As a part of the educational propaganda of the State Board of Health, the second annual summer school for health officers and physicians will be convened at the University at Lawrence, June 10-15, inclusive, and we have advance assurances of a very large attendance. Strangely enough, application from a physician in Missouri has been received, asking permission to attend the summer school, and the Journal of the A. M. A. has thought the matter of sufficient interest and importance to speak of it editorially in an encouraging manner.

## GENERAL.

Following the letter addressed to the general managers of the Rock Island and Santa Fe railway companies as to the housing and sanitary conditions of Mexican laborers found in the city of Wichita, I received replies from those railways, which are as follows:

"THE ATCHISON, TOPEKA & SANTA FE RY. CO.  
OFFICE OF GENERAL MANAGER,  
TOPEKA, February 14, 1912.

(Sanitary conditions at Wichita.)

"*Dr. S. J. Crumbine, Secretary State Board of Health, Topeka, Kan.:*

"DEAR SIR—Referring to your letter of January thirteenth enclosing a copy of report made by Dr. John J. Sippy covering housing and sanitary conditions of Mexican laborers at Wichita, Kan.

"Our general superintendent and superintendent have made a personal inspection of the buildings occupied by Mexicans on our right of way at Wichita, and we have arranged to take the necessary action to improve such conditions so far as the facilities on our own right of way are concerned. We will arrange to build houses for these Mexican laborers, concentrating them in about three locations, and will improve the sanitary conditions. The houses which we will build can be kept clean and we will try to have the laborers occupying them do so. Of course we can not undertake to govern conditions where men reside off our right of way.

"There is no disposition at all on the part of the company to encourage such conditions as are reported in this case. We are abolishing the use of box-car bodies for the housing of such gangs as are not required to be moved, and are building a standard tie house for occupancy by Mexicans wherever their location is permanent. It is, of course, necessary with extra or floating gangs that bunk cars be provided, as their work does not permit their location in one place for any length of time.

"Such of these Mexicans as we find to be tubercular or otherwise seriously diseased are not retained in our service, but through the immigration department are returned to Old Mexico.

"You may rest assured that you will have the coöperation of this department in bringing about an improvement in sanitary conditions so far as we are able to control them. Yours truly, C. W. KOUNS."

"ROCK ISLAND LINES, LAW DEPARTMENT,  
TOPEKA, KAN., January 23, 1912.

"DEAR SIR: Referring to the recent complaint respecting the sanitary conditions in box-car bodies set along right of way of this company for the accommodation of Mexican laborers.

"The only way that conditions may be materially improved is to force the Mexicans to change their method of living. I think you will agree with me that this is a rather difficult undertaking. The standard of living of these people is not up to the standard of this state, even though their present method of living is far above what they were accustomed to in their native land. So far as this company is concerned, however, we have taken the matter up generally over the state, and are making a conscientious effort to improve conditions at these places.

Yours truly, PAUL E. WALKER.

Mr. S. J. Crumbine, Sec. State Board of Health, Topeka, Kan."

After a reasonable length of time another survey will be made of these conditions, and if the railroads have not complied with our request such action will be taken as in the opinion of the attorney-general our laws will warrant for bringing about a correction of these unspeakable insanitary conditions.

On March 13 the following letter was sent to all the railroads operating in Kansas, enclosing a copy of a letter received from a conductor of a certain railway company reciting the conditions that existed on the freight trains of their roads:

Hon. M. A. Low, General Attorney, Rock Island, Topeka.

Mr. C. W. Kouns, General Manager, Santa Fe, Topeka.

Hon. John Madden, General Attorney, M. K. & T., Parsons.

Mr. B. P. Waggener, General Attorney, Missouri Pacific, Atchison.

Mr. W. T. Tyler, General Manager, St. L. & S. F., Springfield, Mo.

Mr. E. Dickinson, Second Vice President, K. C. M. & O., Kansas City, Mo.

Mr. R. B. Scott, General Attorney, C. B. & Q., Chicago, Ill.

"MARCH 13, 1912.

"Mr. J. O. Brinkerhoff, General Sup., Union Pacific Rld. Co., Kansas City, Mo.

"DEAR SIR—I am enclosing herewith a copy of a letter from a conductor of a certain railway company in this state, which is self-explanatory of certain conditions that are existing which seem to me should not be permitted to exist any longer. I am, therefore, asking if you will be so good as to see that an order is issued by the proper authorities which will provide a suitable container for drinking water in cabooses, that can be drawn off through a faucet or spigot, in order that your employees or patrons on freight trains may have an unpolluted and wholesome water supply?

"I trust I may have your assurance that this will be done rather than have the matter submitted to the State Board of Health for the issuance of a formal order.

Very truly yours,

S. J. CRUMBINE, M. D., *Secretary.*"

*"State Board of Health, State of Kansas, Topeka, Kansas.:*

"GENTLEMEN—I would suggest that you order every railroad in the state to equip all of their cabooses with drinking water coolers having faucets or spigots so that the coolers may be kept closed and the water drawn into drinking cups without dipping the cup into the water. As it is now they furnish a keg with a lid to it. When anybody wants a drink they raise the lid and reach down in the keg and dip up the water, and in doing so they generally put a part or all of their hands in the water, and of course they scrape their sleeves over the edge of the keg and rattle off such dust or dirt or filth as may be on their clothing. Men working with cattle or hogs or sheep or horses come into the caboose all dirty and sweating and ram their dirty hands and filthy sleeves into the drinking water. Most everybody that carries their own drinking cup carry the collapsible kind, and it is impossible for them to dip water out of a keg without getting a part of their hands in the water.

"The public drinking cup is n't in it with the public drinking-water keg where everybody that may be riding on the train, and the loafers around depots and others, wash their hands in the drinking water.

Very truly, \_\_\_\_\_ Conductor."

Assurances have been received from the railroads in Kansas that proper water containers would be provided, furnished with a faucet or spigot, which would correct the insanitary condition complained of.

More recently the following letter was addressed to the managers of all the railroads in Kansas:

"TOPEKA, KAN., May 11, 1912.

"DEAR SIR—Will you please to furnish this department with the following information:

"(1) At what points in this state are passenger coaches supplied with water for drinking purposes. Kindly indicate at each place whether or not it is city water that is being used or water from your own plant.

"(2) At what points in this state is ice supplied for cooling water in passenger coaches? Kindly indicate the method of handling such ice. Do you at any points use natural ice for such purposes?

Very truly yours, S. J. CRUMBINE, M. D., *Secretary.*"

To Messrs.—

Hon. M. A. Low, General Attorney, C. R. I. & P. Ry., Topeka, Kan.  
 Mr. C. W. Kouns, General Manager, A. T. & S. F. Ry., Topeka, Kan.  
 Hon. John Madden, General Attorney, M. K. & T. Ry., Parsons, Kan.  
 Mr. Bailie P. Waggener, General Attorney, Mo. Pac. Ry. Co., Atchison, Kan.  
 Mr. W. T. Tyler, General Manager, St. L. & S. F. Ry. Co., Springfield, Mo.  
 Mr. E. Dickinson, Second Vice President, K. C. M. & O. Ry. Co., Kansas City, Mo.  
 Mr. J. O. Brinkerhoff, General Superintendent Union Pacific R. R. Co., Kansas City, Mo.  
 Mr. R. B. Scott, General Attorney, C. B. & Q. Ry. Co., Chicago, Ill.

This information has been requested because of certain known practices of railroad companies which would necessarily pollute even the safest and most wholesome ice-water supplies, together with the fact that in a number of instances natural ice is being used. Replies to this letter have not yet been received from all the railroads.

In addition to this information I have requested Professor Sherwood, of the University, to secure samples of water direct from the ice-water coolers of all the railroads operating in Kansas that enter the union station at Kansas City, as well as samples from all the passenger trains entering the city of Wichita, making bacterial count, and also making the test for *B. coli*. Waters from such roads as are not sampled at these two points will be taken up at such points as can be reached. It is believed that with information from the railroads thus secured, together with actual bacteriological data as to the character of the water being supplied to patrons of the railroads in this state, we will have the basis for putting into effective operation such rules and regulations as will assure the traveling public a safe and wholesome water supply. It is hoped that these reports will be complete and ready to be submitted to you, with recommendations, at our next quarterly meeting.

Early this spring the Pullman Company had cards printed and posted in all the Pullman cars operating in this and other states, bulletining the fact that the porter would furnish a glass for drinking, upon request to any patron desiring to secure it. It was assumed that this would be a clean glass, and that the porter would thoroughly wash and cleanse it before returning it to the locker. Believing this to be in violation of the regulation of the State Board of Health, and also believing and knowing that the order of the Pullman Company was not being properly carried out, a letter was submitted to the company through its sanitarian, Dr. Thomas R. Crowder, advising them of the above facts, which were afterwards satisfactorily adjusted.

In order to test out the degree of efficiency of disinfection as practiced by our health officers throughout the state, arrangements were made with Prof. T. H. Boughton, of the University, to prepare inoculated threads that might be sent out in properly prepared envelopes, to be used as a check on the efficiency of disinfectants. This was done, and the following circular letter sent to Health officers, accompanying a package of these supplies:

*"To County and Municipal Health Officers:*

"In order that you and we may have positive information as to the efficiency of our methods of disinfection and the kind of disinfectant used, I have requested Prof. T. H. Boughton, of the University medical school, to prepare a method whereby that knowledge may with certainty be obtained.

"Accordingly I am enclosing you material for making these tests, which should be made in the regular course of your disinfection of places in the discharge of your duties as health officer.

"Complete directions are on the small envelopes for placing the inoculated threads, unremoved from the folded paper, at various places about the room to be disinfected. Please to fill out all of the blank spaces on the envelope in which they are to be enclosed after exposure, enclosing all in turn in the large official envelope to the University of Kansas Laboratories.

"We express the hope for your enthusiastic coöperation in this work.  
Very truly yours, S. J. CRUMBINE, M. D., *Secretary.*"

Professor Boughton has not yet sufficiently completed the work to draw any general conclusions, inasmuch as a considerable number of the inoculated threads used in disinfecting have not yet been returned to the laboratories, and in a number of instances the data was not sufficiently accurate to enable a publication of the results under the proper headings. He therefore contents himself with making the following statement:

"That the tests thus far have shown neither a distinctly satisfactory or a distinctly unsatisfactory condition in the manner and method of disinfection that is now practiced."

On March 23 your secretary was honored with the privilege of giving an address on "Public Health" at Pierre, the capital of South Dakota. Many of the state officials, including the governor, his private secretary and members of the supreme court, attended the meeting, and it is hoped that some good, at least, may have been accomplished.

Doctor Lerrigo represented this department at the annual conference of the state and territorial boards of health with the surgeon-general, held in Washington, June 1st.

No doubt Doctor Lerrigo will give a detailed report of the conference at the next quarterly meeting.

The rules and regulations formulated by the State Board of Embalming, and submitted to the State Board of Health by mail through the secretary, were unanimously adopted by the members of the Board by letter, but they are herewith presented to you for formal adoption at the annual meeting.

The regulations presented are as follows:

*Rules and Regulations Governing the Preparation and Transportation of Dead Human Bodies in the State of Kansas.*

USE YELLOW PASTER, ETC.

**RULE 1.** Yellow pasters used for the transportation of dead human bodies must contain registrar's removal permit, licensed embalmer's certificates Nos. 1 and 2, railway and express transit forms. Paster must be approved by the Kansas State Board of Health. Said pasters to be furnished by the State Board of Embalming of the state of Kansas, and issued only to embalmers holding a valid license from said Board.

The embalmer who prepares a body for shipment, must fill out licensed embalmer's certificates Nos. 1 and 2, also secure registrar's removal permit, all properly filled out in duplicate and signed. Said embalmer shall detach original licensed embalmer's certificate No. 2 and immediately forward the same to the secretary of the State Board of Embalming of the state of Kansas.

The agent of any railway or common carrier who receives a dead human body for transportation must fill out railway or express transit form in duplicate and sign. He shall detach entire duplicate paster (and immediately forward the same to the secretary of the State Board of Health, Topeka, Kan.), and also securely tack (do not paste, or put in envelope), original yellow paster containing registrar's removal permit, licensed embalmer's certificate No. 1, and transit form on top of shipping box or case (so that same can be easily read). Said yellow paster must accompany body to destination.

No person, railway company or common carrier shall receive for transportation any dead human body unless said body is accompanied by a yellow paster properly filled out and signed by a Kansas licensed embalmer in accordance with this rule.

No dead human body (except disinterred body) shall be accepted for transportation unless said body has been embalmed at least twelve (12) hours.

The sale of embalming fluids and hardening compounds and preservatives, to be used for the preparation of dead human bodies, containing mineral poison, is strictly forbidden in the state of Kansas; also the use, in the preparation of dead human bodies, of any such embalming fluid or hardening compound or preservative, containing mineral poison, is strictly forbidden in this state, and labels on containers shall read: "No mineral poison!"

All embalming fluids sold, offered for sale or used for embalming, in the state of Kansas shall have the per cent of formaldehyde gas as contained in the original package, and also the per cent of formaldehyde gas as used according to directions, plainly and correctly stated on the label.

All shipping boxes or cases must have at least six handles.

COMMUNICABLE DISEASES.

**RULE 2.** The bodies of those who have died of measles, erysipelas, diphtheria (or any diphtheritic disease, including heart failure, croup, membranous croup, angina maligna, putrid sore throat, malignant sore throat), scarlet fever (sometimes called scarlatina, scarlet rash, scarlatinal nephritis, canker rash, rash), glanders, anthrax, smallpox (variola, varioloid), (varicella, chicken pox), Asiatic cholera, yellow fever, typhus fever, bubonic plague, spinal meningitis, pellagra, or leprosy, shall not be transported nor accepted for transportation unless prepared by being thoroughly disinfected by (a) arterial and cavity injection with an approved disinfecting fluid containing not less than fourteen per cent of 40 per cent formaldehyde solution and that the amount of fluid injected must not be less than one-thirteenth of the body weight; (b) disinfecting, and stopping all orifices with dry absorbent cotton; (c) washing the body with a disinfectant, i. e., a solution of bichloride of mercury 1 to 1000 ( $7\frac{1}{2}$  grains of the bichloride of mercury to one pint of water). After being prepared and disinfected as above, such body shall be enclosed in an air-tight, metallic, zinc, tin, copper or lead-lined coffin or casket, all joints and seams hermetically sealed or soldered, and all encased in a strong outside wooden or metal box. Or, the body being prepared and disinfected as above, may be enclosed in a coffin or casket, and the coffin or casket encased in an air-tight, metallic, zinc, tin or copper-lined wooden shipping box, or all-metal shipping case, all joints and seams hermetically sealed or soldered.

The embalmer must adhere strictly to modern sanitary methods in regard to disinfection in preparing dead human bodies for shipment under this rule.

NONCOMMUNICABLE DISEASES.

**RULE 3.** Bodies dead from any cause not stated in rule 2 may be received for transportation when prepared by being thoroughly disinfected by (a) arterial and cavity injections with an approved disinfecting fluid containing not less than 10 per cent of 40 per cent formaldehyde solution; (b) disinfecting, and stopping all orifices with dry absorbent cotton; and (c) washing body with a disinfectant. After being prepared and disinfected as above, such bodies shall be enclosed in a coffin or casket, encased in a strong outside wooden box or metal shipping case.

MANGLED, BURNED, ETC.

**RULE 4.** Bodies dead from any cause not stated in rule 2, such as bodies badly mangled or burned, that can not be prepared under rule 3, may be accepted for transportation by being thoroughly disinfected by an approved disinfecting compound or preservative and by using air-tight sealing as required in rule 2.

MEDICAL SCHOOLS, ANATOMY, ETC.

**RULE 5.** The bodies of those dead from any cause, except puerperal fever and those stated in rule 2, to be used for demonstration of anatomy in colleges and schools of embalming, or for the use of the State Board of Embalming, may be received for trans-

portation when prepared by being thoroughly disinfected by arterial injection with an approved disinfecting fluid. After being prepared as above, such bodies shall be enclosed in a coffin or casket, encased in a strong wooden box or in a zinc, tin, copper or metal-lined box, or metallic shipping case.

#### DISINTERRED BODIES.

RULE 6. Before bodies can be disinterred, a disinterment permit must be obtained from the secretary of the State Board of Health. The disinterment permit must be tacked (do not paste or put in an envelope) on top of shipping box, same as the yellow paster, and must accompany body to destination.

No disinterred body, dead from any disease or cause named in rule 2, shall be accepted for transportation until after dead at least two years. All disinterred bodies shall be treated as infectious or dangerous to public health, and shall not be accepted for transportation unless said removal has been approved by the authorities having jurisdiction where such body is disinterred, and the consent of the authorities of the locality to where the body is consigned has first been obtained, and all such disinterred remains shall be enclosed in an air-tight metallic, zinc, tin, copper or lead-lined coffin or casket, all joints and seams hermetically sealed or soldered, and encased in a strong outside wooden or metal box, or casket encased in an air-tight metallic, zinc, tin, copper or metal-lined box or metal shipping case, all joints and seams hermetically sealed or soldered.

#### RESHIPMENT.

RULE 7. Bodies which have been embalmed and are in good condition may be reshipped by a Kansas licensed embalmer by using yellow paster, filling out licensed embalmer's certificates Nos. 1 and 2, and copying original physician's, coroner's, health officer's certificates or registrar's removal permit.

Bodies not in good condition shall not be reshipped until said body has been prepared and disinfected according to the rules governing the preparation and transportation of dead human bodies in this state.

#### DEAD BODIES IN TRANSIT.

RULE 8. It is further ordered by the State Board of Embalming, that all dead human bodies coming into the state of Kansas in transit or for burial from other states, shall be accompanied by physician's, coroner's, health officer's certificate or registrar's removal permit, stating cause of death, etc., also by a certificate of a licensed embalmer, stating the body has been embalmed according to the transportation rules of the state from where said body was shipped.

Application is before the department for the approval of the so-called "Thornton device" for sterilizing glasses which can be used in place of the common drinking cup in hotels and other public places. While we have made no bacteriological test of the efficiency of this device, yet it seems to have been worked out by other known bacteriologists and to have proven satisfactory. I would, therefore, recommend that the Thornton device be approved and be permitted to be used in public places in lieu of the common drinking cup. Perhaps another reason why it would be the part of wisdom to approve this device is, the constant difficulty we find in enforcing the regulation in the hotels in this state. Naturally these hotels are inspected only at long intervals, and the regulation may go unheeded for months at a time without the knowledge of the department. If, therefore, some safe substitute can be found, it would seem to be wise to permit the use of such a substitute.

#### CONCLUSIONS.

All together, the past year's work of this department has been fairly satisfactory in the amount and kind of work accomplished, and while rather strenuous at times, has as a rule been both pleasant and interesting.

The usual duties of the secretary, combined with those of the dean of the school of medicine and as a member of the advisory commission of the state tuberculosis sanatorium, have kept him more than moderately busy; and yet I think it is the experience of every one who has enlarged opportunities for usefulness that even if it means more work, there are compensations. I can not close this report without expressing my keenest appreciation for the admirable support and help given me by my office force. Who could not work with vim and encouragement under the pleasant conditions in which I live! No less satisfying is the knowledge that every member of the office force is very much interested and alive to the work of the department. On more than one occasion that interest has been manifested in a way that is unmistakable.

Respectfully submitted.

S. J. CRUMBINE, M. D.,  
Secretary.

## MINUTES OF THE ANNUAL MEETING OF THE STATE BOARD OF HEALTH,

HELD IN THE OFFICE OF THE SECRETARY, IN THE STATEHOUSE, JUNE 6  
AND 7, 1912.

The annual meeting of the State Board of Health convened in the office of the secretary at two o'clock P. M., June 6. All the members of the Board were present excepting Doctors W. O. Thompson and Charles H. Lerrigo. All the members of the advisory board were present excepting Professors F. O. Marvin and E. H. S. Bailey. The only member of the conferees present was Mr. J. A. Kimball.

The minutes of the last quarterly meeting were read and approved and ordered placed on file, after which the secretary made his annual report of the work of the Board for the past year, whereupon the president took up the recommendations made in the secretary's report.

The Board concurred in the secretary's effort to secure some effective means and measures adopted by the packing houses of the state, whereby effective physical examination of all employees handling food products shall be made to determine whether or not such employees are free from infectious diseases, especially tuberculosis, and that such examination should be made semiannually, and instructed the secretary to continue his efforts in that direction.

The Board unanimously approved of the circular letter sent out to wholesale grocers under date of April 8 condemning the use of so-called "swells" in canned food products.

The Board indorsed the action of the secretary as outlined in the correspondence between Dr. Thomas R. Crowder, superintendent of sanitation for the Pullman Company, and the department, to the effect that the common cup or glass can not be supplied to patrons on trains upon request of porter.

The Board unanimously adopted the resolutions offered at the annual meeting of state and territorial health authorities with the Public Health and Marine Hospital Service, at Washington, June 1, which resolutions are as follows:

"1. That the health authorities of the states, territories, and insular possessions of the United States, including the District of Columbia, shall notify the surgeon general of the Public Health and Marine Hospital Service immediately, by telegraph (collect) and letter, upon the occurrence of a case or cases of cholera, yellow fever, typhus fever, plague or Rocky Mountain spotted or tick fever, giving the number and location of cases, and that said authorities shall render monthly reports of the number of cases notified of smallpox, leprosy, scarlet fever, measles, diphtheria, typhoid fever, poliomyelitis, cerebrospinal meningitis, dysentery, Rocky Mountain spotted or tick fever, and other diseases notifiable in their respective jurisdictions; said monthly reports to be made on or before the 20th day of each month for the preceding calendar month, and

to give the distribution of cases of smallpox, leprosy, poliomyelitis, cerebrospinal meningitis, Rocky Mountain spotted or tick fever and typhoid fever by counties, or by counties and cities, or by towns (townships), or by towns (townships) and cities; and that when in a state one or more cities are excepted by statute, charter, or otherwise from reporting the occurrence of the notifiable diseases to the State Department of Health, and the state report therefore is exclusive of cases occurring in such cities, the cities thus excluded shall be enumerated.

"2. That upon the occurrence of an unusual outbreak, or in the event of a sudden increase in the number of cases of smallpox, scarlet fever, diphtheria, typhoid fever, poliomyelitis, cerebrospinal meningitis, or Rocky Mountain spotted or tick fever in any locality, the surgeon general of the Public Health and Marine Hospital Service shall be immediately notified, by telegraph (collect) and letter, of such unusual outbreak or sudden increase.

"3. That in the primary notification of smallpox to local health authorities the date when the patient was last vaccinated and whether the disease is of the benign or virulent type shall be stated; that in all outbreaks of smallpox in which one or more deaths occur a report of such data as can be obtained regarding the origin of the first case or cases and the history of the outbreak shall be made to the surgeon general after the subsidence of said outbreak; that all reports of cases of smallpox made by the state or other health authorities to the surgeon general shall be divided into four classes:

"(a) Those vaccinated within a period of seven years preceding the attack.

"(b) Those whose last vaccination occurred more than seven years antedating the attack.

"(c) Those who have never been successfully vaccinated.

"(d) Those in which no definite history is to be obtained.

"4. That in reporting the occurrence of cases of leprosy such data as it is possible to obtain regarding the patient's history shall be given.

"5. That the surgeon general shall, under the direction of the secretary of the treasury, pursuant to section 4 of an act approved February 15, 1893, entitled 'An act granting additional quarantine powers and imposing additional duties upon the Marine Hospital Service,' compile and publish the reports forwarded in compliance with the foregoing in the Public Health Reports, for the information of the health authorities of the several states, territories, and insular possessions, including the District of Columbia."

The rules and regulations presented by the State Board of Embalming, and which were presented to the members of the Board by mail for their approval, were formally and unanimously adopted and made official.

The application of the manufacturer of the Thornton drinking device as to whether or not it could be utilized in public places in lieu of the common drinking cup was discussed, and the secretary was instructed to correspond with the manufacturers and state that the Board would be glad to give the device a bacteriological test if installation was made at some point where the bacteriological department could conveniently make such test.

The committee on food standards made the following report, which was unanimously adopted:

"I. We endorse the secretary's action in reference to swelled canned goods and hold in abeyance the matter of springers. It is understood that neither springers or swells may be sold, in the case of canned meats or fish or other animal food products.

"II. In reference to the communication from bottlers regarding imitation diluted fruit juices, the standards committee recommend that paragraphs 6 and 7, section F, beverages, remain unchanged."

Doctor Haughey, of the tuberculosis exhibit, submitted the following report:

*To the Honorable State Board of Health:*

I desire to submit the report of the tuberculosis lectures from November, 1911, up to the present date.

Prior to June, 1911, practically all county-seat towns had been visited by Doctor Emley with the tuberculosis exhibit, so that very few towns over 1000 remained to be visited, and as the exhibit, because of its size, necessitated at least two days in order to set up exhibit and then tear down Doctor Crumbine decided it would not be advisable to carry the exhibit in visiting towns of from 400 to 800 population.

So the work this year has consisted in a lecture of approximately two hours' duration on "Tuberculosis, its Cause, Prevention and Cure," a part of the lecture being illustrated with stereopticon views and moving pictures. In this way we were able to reach many more people and cover a much larger territory than could possibly have been covered while carrying the exhibit.

Since the first of January, 1912, there has been added to the equipment one new Edison moving-picture machine and one new film of moving pictures entitled "The Awakening of John Bond," giving us three films available for use in the work, so at the present time we have an unusually fine equipment, making possible as fine an exhibit of motion pictures as can be seen in any city. These motion pictures, which have been featured in the advertising matter, have been an important factor in drawing the large crowds which have everywhere been in attendance at the lectures.

Except on one or two occasions, a remarkable amount of interest has been shown, not only in this campaign against the "great white plague," but in the work of this Board along all lines for the betterment of public health, and generally we have received hearty coöperation from everyone with whom we have come in contact.

With the possible exception of one dozen towns, every city and village of 400 or over in this state has been visited or has been offered the lecture; in a few instances, on account of some previous attraction the city could not arrange for the date offered, and wherever possible such towns were visited later.

One lecture a day for the public was given at eight P. M., generally in the largest public hall in the city, and at these evening meetings the hall was generally taxed to hold the crowds assembled, standing room often being at a premium. In the afternoon a talk on the general subject of health was given at the school building or in the high school for all classes above the fourth grade, the special subject of tuberculosis being touched upon.

At the evening lectures, for 142 meetings we had an average approximate attendance of 275, and when the average population of the towns visited was approximately 500, the proportionate attendance speaks well for the interest being shown. The school attendance, in most cases, would equal the evening attendance; so, taking a conservative estimate, between 75,000 and 100,000 people heard something on the great white plague.

I consider the Board fortunate in securing the services of Mr. Jones as operator for the machine; he is a thorough advertiser and an unusually expert motion-picture operator.

Everywhere we heard expressions of approval from the laity, profession and press for the State Board of Health and Doctor Crumbine for their tireless, progressive campaign for the betterment of our state's health.

The work should be continued until everyone in the state has had an opportunity to hear of this terrible plague, for it is only through publicity and education of the public along the lines of prevention that we can hope to cope with the dreaded disease.

Appreciating the interest being shown and the necessity for the continuation of this work, I close this report with a plea for an appropriation from the next session of the legislature for a continuance of this campaign against the great white plague.

Respectfully submitted.

LEO. HAUGHEY.

*Tub. Lecturer for the State  
Board of Health.*

Professor Willard, food analyst, submitted the following report:

#### ANNUAL REPORT TO STATE BOARD OF HEALTH.

By J. T. WILLARD, Food Analyst, and C. A. A. UTT, Assistant Analyst.

The samples analyzed for the State Board of Health have probably not been as numerous the past year as in some of the previous ones. As in previous years, considerable time has been given to research work in connection with the food analyses.

The tests made include six samples of butter, 77 of milk, 41 of evaporated milk, 50 of ice cream, 5 of meat, 27 of lard, 20 of oysters, 25 of mincemeat, 6 of flour, 2 of gluten flour, 12 of buckwheat flour, 2 of whole wheat flour, 20 of graham flour, 3 of rye flour, 22 of pies and pie fillers, 10 of canned pears, 4 of canned tomatoes, 8 of canned corn, 15 of ketchups, 15 of pickles and relishes, 3 of cider, 60 of vinegar, 15 of extracts, and 24 miscellaneous samples.

The research concerning the molds, yeasts, bacteria, etc., in commercial ketchup has been continued. I would recommend that a standard be established concerning this article.

Investigation was conducted upon a method of determining the fat in condensed milk.

An investigation was conducted on a method of ascertaining whether graham flour as put upon the market is true to name, or whether it consists of some sort of an artificial mixture of bran, shorts, low-grade flour, etc. This investigation is not entirely completed, but has yielded very satisfactory results. It consists in putting the suspected flour through a system of sifting, accompanied by an examination of the parts separated to see whether they are of a character that would be produced by simple grinding, such as would be done with the genuine graham, or whether they have the characteristics of the finished by-products of ordinary milling.

An investigation is also in progress to discover a means by which to pass upon mincemeat with reference to the percentage of meat present. This is based upon the percentage of nitrogen in the mincemeat, and results thus far are very encouraging.

Mr. Utt has been called upon to testify in six court cases.

Respectfully submitted.

J. T. WILLARD.

Professor Sayre, drug analyst, then followed with his report, as follows:

#### DRUG LABORATORY REPORT.

During the year beginning April, 1911, six hundred samples have been examined in the drug laboratory. Besides the official preparations, such as ointments, tinctures, elixirs, liniments, etc., about fifty samples of linseed oil, several samples of turpentine, fifteen samples of intoxicating beverages, samples of coffee, spices, patent medicines and insecticides have been examined. The drug laboratory has also been called upon in eight cases of suspected poisoning.

Most of the samples were sent in by the drug inspectors, but many

samples have been received at the laboratory directly from the person interested, or, in not a few instances, from the parties indirectly, through other departments of the university.

Special attention has been given, during the last three months, to work on linseed oil. About 40 per cent of the samples of linseed oil picked up at random by the inspectors were found to be adulterated, while practically all samples that were picked up because of their suspicious appearance were found to be adulterated. The insecticides were examined more for the purpose of determining their efficiency rather than their composition. In the cases of suspected poisoning, the experience of our laboratory has been like many other chemical laboratories—that the idea of the presence of poison was due to the unhealthy imagination of some individual. However, this is not always true, and rather serious cases of poisoning have come under our investigation. As a factor in the enforcement of the prohibitory law, the drug laboratory has received and passed upon several samples of intoxicating beverages; this class of samples being received from city health officers, prosecuting attorneys, and others interested in the enforcement of the prohibitory law. Samples of this nature are sent more and more each year through the regular channels of the State Board of Health.

Doctor Greenfield, bacteriologist, made the following report:

Total number of specimens examined since July 1, 1911.....	2,523
Number of specimens of sputum .....	1,555
Number of specimens of blood for Widal .....	274
Number of suspected diphtheria .....	473
Number of water for <i>Coli communis</i> .....	149
Number of suspected gonorrhoea .....	30
Number of suspected rabies .....	24
Number of suspected meningitis .....	16
Number of positive examinations:	
Sputum .....	325
Diphtheria .....	146
Blood .....	96
Gonorrhoea .....	11
Rabies .....	9
Meningitis .....	7
Water giving fermentation test .....	50

Professor Jackson submitted an oral report on the work of the food laboratories at the University.

Professor Sherwood made a partial report on the examination of drinking water on railroad trains, and the Board, upon motion, instructed the continuance of the work until completed.

Doctors Sippy and Kenney, who have been doing special work for the State Board of Health in the enforcement of the tuberculosis notification law and in studying the incidents of the disease in cities of the first class, made interesting and valuable reports of their work, stating that written reports would be made later.

Adjournment was then made until nine o'clock A. M., June 7.

The Board met in the office of the secretary, Friday morning, June 7, a quorum being present, when the subject of swelled canned goods came up for discussion.

The special committee on headache preparations then made its report, which, upon motion, duly seconded, was adopted and ordered published in the BULLETIN, and it was so published in the June issue.

Professor Hoad, engineer, made his report for the division of water and sewage.

The special committee on time limit for quarantine of scarlet fever made its report as follows:

*To the State Board of Health:*

GENTLEMEN—We, your committee appointed to consider a minimum quarantine for cases of scarlet fever, beg leave to report the following:

We recommend that minimum of absolute quarantine be fixed at twenty-eight days, and that a further modified quarantine of ten days be maintained, in which patient shall not be permitted to attend school or other public places.

Whereupon the report was unanimously adopted and ordered to be published, and it was published in the June BULLETIN.

The Board, under the provisions of the law, being empowered to fix the salary of employees under the vital statistics law, fixed the salary of the state registrar at \$2100 per annum, beginning July 1, 1912.

The reports of the special committees on inspection of state institutions were then made, the first being made by chairman, Doctor Walker, on the Mother Bickerdyke Home, the Girls' Industrial School at Beloit, and the State Normal School at Hays.

Doctor Alexander then gave report on the state penitentiary at Lansing, as follows:

*To the State Board of Health:*

GENTLEMEN—Your committee, appointed to investigate the sanitary condition of the penitentiary at Lansing, visited that institution on Friday, May 24, and hand you herewith report of inspection made on that date.

Arriving just before the dinner hour, we first investigated the dining room and kitchen, and, of course, the food. The last was apparently abundant, well cooked and nutritious, while an examination of the bills of fare for several successive days revealed such changes, from time to time, as to afford, on the whole, a well-balanced ration. The dining room and kitchen are well kept for the most part, but flies were a little too numerous, and a little closer attention to screens was recommended. The floors are of cement, rough of surface, and divided into squares by the usual unsightly and uncleanable gashes. Evidently, reasonable efforts are put forth to keep this surface clean, but for all that it looks dirty, as doubtless it would after any amount of scrubbing.

Your committee advised the use of a good cement paint. This would fill the cracks between the blocks and make the whole floor smoother and therefore more easily cleaned. We found the cell houses well kept and well ventilated, but the cells themselves dark, practically sunless, and altogether too near the idea of the ancient dungeon to conform to the standards of modern civilization.

Moreover, there is no plumbing, and no conveniences such as a man, even a criminal man, confined in a space 4 x 7 feet in size ought to have. There is only one way to cure this and that is to tear them down and build new ones inside the walls. There is a large room at the top of the mine shaft, called, for some unexplained reason, the "cap room" (perhaps because it caps or covers the top of the mine shaft). In it are some long benches, several hogsheds of water and a large number of wash pans. This combination enables the miners, as they come up from their work, to rinse from their bodies the dirt and coal dust which accumulates during the day. This, with whatever waste matter comes from their bodies, falls to the floor, where it wanders about or stands in irregular pools in a not altogether pleasing way among the rough and irregular stones of which the floor is composed. Surely this is distinctly insanitary, and the fact that it is only the top of a coal mine is no good reason why such a condition should exist. Let it be torn up and a properly laid cement floor take its place.

The woman's building is new and therefore modern and up-to-date to a degree—that is to say, the cells are larger and there is very good plumbing. But the cells have no outside windows and bedbugs are troublesome. These last are said to be brought in by new prisoners, and doubtless many are, but there must be some natives, since it is admitted that there are many breeding places—as around the doors and between bricks on the wall. It would seem that by the exercise of a little persistence this condition might be corrected. The kitchen and dining room seem to be all right, except that there is too much rusty tinware and battered and dingy blue granite. Both ought to be replaced by new white granite ware.

The hospital is unsatisfactory as to arrangement and wholly inadequate as to the needs of the institution, but as effective as possible under the circumstances. A new hospital should be built, and because the number of tubercular patients is small, and likely to remain so, the problem of their care could be easily solved by building a pavilion on the roof communicating with a tuberculous section of the building having no direct connection with the rest of the hospital.

About the only thing to interfere with this roof pavilion idea is the smoke from the big chimneys, but this can be easily remedied by building the chimneys higher, a thing which ought to be done anyway, for the good of all connected with the plant. We believe the increase in height should be not less than twenty feet.

The water supply of the institution is from wells on the river bottom, located at a point where there is no danger of overflow, and appears to be entirely satisfactory both in quantity and quality.

There is a well-built dairy barn on the grounds. It has too few windows, and is, therefore, a bit dark. Whether this is due to a miscalculation on the part of the builders, or the result of a deliberate design to make the interior less attractive to flies (an old idea) is not known. But in any event, with our better modern ways of disposal of the fly nuisance, a few more windows would be a decided improvement. Even so, there are too many flies about; a condition, however, which is to be remedied by a more frequent removal of the manure.

Taken as a whole, your committee finds the condition of the penitentiary most commendable and a credit to the zeal and good judgment of those in authority. Many things were noted, some of them having no direct bearing on health matters, which we believe mark a distinct advance in prison management. Yet some of these, such as the daily half hour of baseball and other recreations, are surely conducive to good health. Moreover, in these games the prisoners are to an extent put upon honor, so that physical force and moral stamina are both cultivated at the same time. Another feature which is not without something to commend it is field work (gardening) for women. This is not compulsory, but is gladly taken by many prisoners as a relief from the monotony of the sewing room. A night school with a good attendance

is conducted, and is highly appreciated by many, and is surely a great factor in the fitting of men to lead respectable lives after release.

One interesting thing about the institution, which is not generally known, is its relation to the local government of the village of Lansing. The town which has grown up about the penitentiary contains a population of about 1200 and has never been incorporated. It is, of course, under the usual township government, but this is insufficient for all the needs of such an aggregation of people, and so the warden, by common consent, is acting mayor of the city. Does some thoughtless or overwrought individual disturb the peace of its citizens? They telephone the warden, who promptly responds with the indicated remedy. Through him, also, the predatory cow, the insecure sidewalk, and the rest of the usual village nuisances are abated. In like manner, he puts out their fires, advises them about their water supply and their street grades, and, in general, exercises a paternal oversight of the villagers and their affairs; and the arrangement appears to work well and to satisfy the people; for though they have repeatedly been urged to incorporate, they still cling to the simpler way. So, if they are satisfied, and if the village and penitentiary can work together to the advantage of both, who shall object?

B. J. ALEXANDER.

S. J. CRUMBINE.

Whereupon, following the reading of the reports of institution inspections, the Board, upon motion, instructed that copies be sent to the heads of the state institutions inspected, which has been done.

The annual election of officers was then taken up, which resulted in the following:

For President for the ensuing year, Dr. H. L. Aldrich, of Caney.

For Vice President, Dr. V. C. Eddy, of Colby.

For Secretary, for a term of four years beginning July 1, 1912, Dr. S. J. Crumbine.

Upon motion, the present members of the advisory board were all reelected for the ensuing year.

Upon motion, additional members of the advisory board were elected, namely, Prof. F. W. Blackmar, sociologist, and Mr. J. Floyd Tilford, assistant chief food and drug inspector.

The Board then went into executive session, after which, no further business appearing, upon motion the Board adjourned to meet upon call of the secretary.

The following bills were audited and allowed:

Prof. H. L. Jackson.....	\$1.68
Prof. C. A. Utt.....	5.43
Prof. G. N. Sherwood.....	13.31
Prof. L. D. Havenhill.....	1.43

Dr. W. O. Thompson.....	25.40

## DIVISION OF FOOD AND DRUGS.

REPORT COVERING PERIOD FROM JANUARY 1, 1911, TO JULY 1, 1912.

TO THE SECRETARY OF THE STATE BOARD OF HEALTH—This report, covering the work of the food and drug division of the department of the State Board of Health, includes all of the work coming under the food and drug law and the sanitary law, covering the handling of these products, together with the weights and measures and hotel law and linseed oil, enforcement of which is with this department.

### FOOD AND DRUGS.

The work for this time, coming directly under the food and drug law, shows approximately the same volume of work being done by the department as for the preceding two years. During 1911 there were 10,419 inspections reported by the inspectors, records of which are permanently filed. This does not include hundreds of minor inspections and complaints investigated which were not of enough importance to report; neither does it include investigations by the county health officers of complaints referred to them by the department. During any year there are several hundred of these, and it is safe to say that a total of all inspections made by representatives of this department will show a total of at least 15,000.

For the six months of this year there have been 6380 inspections reported by the inspectors, or in all at least a total of 8500 inspections for the past six months.

The coming year should be our record year, unless we are at the end of the year forced to have our inspectors go more slowly, and be unable to take up much of the work that has been planned, owing to the reduction of the appropriation providing for their expenses.

During the past eighteen months there have been 991 analyses of food products reported by our chemists, of which 486 were found illegal. These samples represent all classes and kinds of foods being sold in the market, and as in practically all cases only samples of questionable goods are taken, it will be readily seen why so many of these are illegal. In other words, a comparison of the several years' work shows plainly the great improvement in the products now being sold in the market in the quality and correctness of labeling, and in approved methods under which they are being handled and sold. A large number of these were samples of alumed-pickled goods, found mostly in the northern part of the state and coming from Nebraska houses. Correspondence was had with these houses, and we have reason to believe that there are at this time practically no alumed-pickled goods in this state. It was necessary, however, to bring a few prosecutions against the sellers of these goods before they seemed to realize fully that the department intended to prohibit their sale.

The various classes of goods sampled, and an idea as to the condition in which food products are now found in the market is more clearly shown in the table which will follow, giving analyses of food products during the past six months.

There have been 470 drug products analyzed and reported, and it was found that 222 were illegal either on account of adulteration or misbranding.

The number of illegal goods here given does not include those products for which there is no standard, yet the analyses showed a wide variation from the analyses of the freshly prepared product made according to the requirements of the U. S. Pharmacopœia; analyses of old stock, deteriorated and misbranded goods are likewise not included.

It was found, for instance, in the analysis of tr. of nux vomica that there were four of these above the required standard and fourteen below, one sample containing no strychnine whatever. The samples of tr. of aconite analyzed, fifty-nine in all, showed these products to be less than one-half the required strength, some of them running down to practically nothing.

Products for which no standard was given in the Pharmacopœia, but showed a great variation from that of a standard U. S. P. product freshly prepared in the laboratory, as tr. of kino, tr. of lobelia, beef, iron and wine, and elixir of iron, quinine and strychnine—these goods showed a wide variation from the solid content and in alcoholic content, as did also the pepsin preparations, 31 of which were found not to meet the required standard. In one case it was found that calomel and santolin tablets, sold as containing one-fourth grain santolin and one-eighth grain calomel, contained one-half grain santolin and one-fourth grain calomel.

The report of the analyses, both for the food and drug laboratories, does not include a great number of products that go to them of which no report is made. These are samples that are sent to them for investigation, or a line of goods simply for our own investigation, in order that we may more thoroughly know what is in the market and how such goods are being put out. These reports include only legal samples, procured by the inspectors, that were taken with a possible view of prosecution or to enable us to obtain the necessary information to show the dealers or others why it is absolutely necessary that they should give special attention to any particular line of goods they are handling.

The following report shows the result of analyses of foods and drugs reported by our chemist from January 1 to July 1, 1912:

During the past year there were approximately 100 samples of vinegars tested in this office and reports made to the parties sending in the samples as to whether or not the product was standard in acid strength.

The method of investigating and fixing the responsibility in the sale of illegal products has been by correspondence direct with the dealers and manufacturers. In fact, a hearing has been given in each case and an attempt made to place the responsibility for any illegal product exactly where it belonged.

For the reason that there are a great many products made by the druggists, there was during the earlier enforcement of the law many more prosecutions brought against druggists than there have been at this time. The druggists, as a whole, at once realized their responsibility in this matter and have endeavored to fully meet the requirements of the law, especially in the matter of the products of their own make. This has resulted in the fact that there are now very few products made by the druggists that are found to be illegal.

If a dealer in a food or drug product can clearly show that he is not responsible in any way for an illegal preparation, and is protected by a guarantee, it has always been the policy of the department, after a

thorough investigation of all the circumstances by personal inspection or by correspondence, to try and clear the market of such illegal goods by coöperating with the dealers, and prosecutions have been brought only where it has been absolutely necessary in order to force the responsibility where it belonged and to free the market of illegal goods.

One hundred prosecutions have been brought for violations of the food and drugs law, all of which have resulted in fines. Records of all cases from January 1, 1912, to July 1, 1912, are herewith appended. (Prosecutions for 1911 were published in the January, 1912, *BULLETIN*.) Prosecutions for insanitary conditions are not included in this number, but are reported separately, there having been fifty-four during this time, and these comprise complaints against restaurants, meat markets, slaughter-houses, and practically every line of business, and make in all a large part of the total number of prosecutions.

It is undoubtedly a significant fact that during the past eighteen months there have been a large reduction in the number of prosecutions. This is so, I believe, simply from the reason that the merchants are gradually realizing more and more the necessity of complying with the requirements of the law and are putting forth every effort to comply. This, together with the attitude always taken by the department, believing it better to educate the trade in giving them the best possible opportunity to meet the law's requirements, has resulted in a thorough coöperation between the department and practically all lines of trade, and thereby making it necessary for the department to bring only this small number of prosecutions in order to enforce the law.

Our correspondence shows clearly the attitude of the great majority of dealers throughout the state, in that it is constantly growing along the line of inquiries from dealers and all others interested, asking for all kinds of information, thus showing their desire of meeting the requirements regulating the sale and handling of all food and drug products. It is, indeed, a satisfaction to see the spirit of willingness shown by practically all to meet the requirements of the law and to comply at once with all orders and instructions given by our inspectors.

Our system of following up orders given by the inspectors has shown great results. It shows the absolute necessity of meeting the requirements, and does not let the party to whom an order is given forget, as soon as the inspector is out of sight, that he is expected to meet the requirements and notify the department when that has been done. This system has been followed in all cases where it was not felt necessary to make prosecutions, and this plan, together with the same plan being used in the investigation of the sale of all illegal products, has resulted in the great majority of the cases being satisfactorily adjusted without prosecution.

The work previously started in the enforcement of the law as it applies to the sale of eggs unfit for use, thus practically necessitating candling, has been carried on with undoubtedly good results. Last year there were several prosecutions for the sale of eggs unfit for food purposes, and this year our inspectors report that their investigations show the great majority of dealers are candling, buying all eggs on the "loss-off" basis. Up to this time, for this year, no case of a sale of eggs unfit for use has come before the department for prosecution, thus clearly showing the good results that have been obtained in the marketing of this one particular food product.

The question of weed seed and other extraneous matter in wheat, which was taken up a short time ago, has, according to all reports received, been of great benefit to all concerned and is having the heartiest support of all affected, for it is realized that it is a step in the right direction. A year's education as to the requirements of the law in this matter will have the result of practically freeing our wheat of most of this extraneous substance, which it has been shown can be removed.

The matter of the proper labeling of the bottlers' products has been taken up, and it is believed that the bottlers are now in line and that

next year's products will be properly labeled, thus improving this business and giving to it, I believe, a great impetus.

In the matter of sanitary conditions, there is one item in particular to which I wish to invite your attention, and that is to the railroad camps—those places that are being conducted on the order of a boarding-house and clearly come within the meaning of the food and drug law and sanitary law. Two particularly bad cases were reported to the department. After an investigation the matter was taken up direct with the railway company which furnishes the cars and the company which contracts to board the men, and we have their assurance, the work already being started, that all these places throughout the state will be properly screened, put in sanitary condition, and so maintained in the future.

#### WEIGHTS AND MEASURES.

During the year 1911 there were 204 scales, 110 weights and 57 measures condemned, making a total in all of 731. This does not include a large number of scales, weights and measures that were destroyed and taken up by the inspectors, reports of which were never made on account of these being in such condition that it was impossible that they be fixed, so that the inspectors simply took them up or destroyed them without making a record of the same; also a large number of apothecaries' weights and small avoirdupois weights (approximately 5000), no record of which has been kept.

To show more definitely just what work has been done in enforcing the weights and measures law, the following data, showing some of the work done by one of the inspectors for approximately nine months, is here given. This was in the testing of druggists' scales, weights and measures.

Prescription scales passed.....	523
Prescription scales condemned.....	195
Counter scales passed.....	439
Counter scales condemned.....	10
Graduates passed.....	1,320
Graduates condemned.....	154
Counter weights passed.....	3,607
Counter weights condemned.....	61
Prescription weights passed.....	6,116
Prescription weights condemned.....	5,362

This makes a total of 17,787 scales, weights and measures tested, and a total condemned of 5782.

The reports of the inspectors for the six months of this year show a total number of 5232 scales, 11,245 weights and 3814 measures inspected. Of this number there have been 68 scales, 300 weights and 17 measures condemned. A comparison of these figures with those of former years shows to what a great extent the market has been cleared of scales, weights and measures that were not accurate, not coming within the limit of tolerances. It is to be regretted that we are unable to do more with these, but, as you well know, with our present number of inspectors it is impossible to give this work the particular attention it deserves, other than the inspection of the scales, weights and measures in those places where the inspectors' regular food and drug work take them. It is a fact worth mentioning that when this law first went into effect there were quite a few scales, weights and measures found which were incorrect on account of some special device used to affect the weighing of the scale, or showing evidence of tampering or willfully trying to defraud by using some makeshift in weights that had been bored out and made light; these and other schemes were used to defraud. During the past eighteen months, however, there has not been a case of this kind found in all of the scales, weights and measures condemned, the trouble being more on account of lack of care and their gradual wearing out and not keeping them properly adjusted.

This law has had really a wonderful effect, not alone in getting rid of the false scale and making the giver of short weight and measure correct his method of doing business, but is making everyone feel the necessity of paying attention to these things and maintaining them in proper condition. Many a merchant has found this to his own financial gain.

There have been twelve prosecutions under the weights and measures law, and a list of these, covering the time from January 1 to July 1, 1912, together with a list of all scales, weights and measures condemned, is herewith appended. All prosecutions and condemnations coming under this law in 1911 were published in the January and March BULLETINS for 1912.

#### HOTELS.

Compared with other years, the hotel work for 1911 was fairly satisfactory. The work so far this year has probably given us the best results we have had, for the reason that the two drug inspectors have been giving particular attention to this work in connection with their regular drug inspection. This has necessarily not allowed them to pay the usual amount of attention to the inspection of drugs, and as a consequence, while one part of our work has been bettered, I believe that the other has suffered. The results obtained in this work have never been satisfactory, for the reason that we do not have the necessary inspectors to give this work the necessary amount of attention.

To depend on the county health officer for these inspections is uncertain, and it has been shown that the desired results can not be obtained in that way. If this work is to remain with this department we should have at least two hotel inspectors, whose work primarily shall be to look after hotels. By such inspection only can the hotel law be properly enforced.

During the past year the matter of hotel inspection was given practically no special attention by this department, with the exception of one period, when all of the inspectors were given certain territories, and for about thirty days devoted their entire time to the work. However, as that was the only time when particular attention could be given to this, and as it was impossible for the inspectors to visit all of the hotels in that time, it was felt that some other system should be devised so that we could so far as possible with our limited field force give special attention to the hotel work. It was therefore decided that for this year the two drug inspectors should devote their time in part to the hotel-inspection work throughout the entire year, coöperating in each county with the county health officer. It will necessitate their traveling a little slower, and will not enable them to cover their territory so rapidly, but we feel that this year special attention should be given to the hotel work and the hotel people made to realize that this law has been in force long enough for them to know that they must comply with its requirements.

The usual letters were written to the county health officers asking for the inspection of the hotels of their county and prompt reports. As a whole, these have been coming in in much better shape. Our two drug inspectors have had opportunity to do some work in most of the counties, and as a result of this coöperation with the county health officer a larger number of reports than usual have been received. These in most cases are only partial reports, but I believe by the end of the year most of the counties will have complete reports. It is the intention to give the county health officer every assistance we can, and this year obtain, so far as possible, complete reports from every county. In some counties, however, the county commissioners refuse to allow the county health officer any pay for doing this work, and as a result the work is not done and we are unable to get the necessary results.

Since the passage of the hotel law, four years ago, there are ten counties for which reports have never been received, and a great many others that have only been partially reported. On account of being unable to give this work the attention it should have, it has necessitated

our spending a much longer time in educating the hotel keepers of the state as to the law's requirements. For that reason we have been slow to bring prosecutions for violations of the law, but have endeavored first to see that everyone was acquainted with the requirements and had had an opportunity to comply. Pursuing this policy, there were no prosecutions brought until in 1910, thus giving the hotels practically two years to comply with the requirements. During that time, however, a large number of hotels were closed. These places were given the choice of closing or standing prosecution. In this manner some of the worst places were put out of business.

In 1911, however, it was found necessary, on account of the conditions, to bring four prosecutions, and now that this law has been in operations sufficiently long for everyone to know thoroughly its requirements, and there is no reason at this time for noncompliance with those requirements, we expect this year to rigidly enforce the hotel law and bring prosecutions against all violators.

This work, then, for the six months of this year shows twelve prosecutions for various violations of the hotel law (a list of which is herewith appended), and hundreds of orders given by our two inspectors detailed on this work, all of which will be closely followed up, and by the end of the year, if we have the assistance we should get from the county health officers, the condition of the hotels, both as to fire-protection, equipment and sanitary conditions, should be greatly improved. There are on record at this time, as reported by the county health officers and our inspectors, 1200 hotels and rooming houses or places coming within the meaning of the hotel law. For this year there have been issued 584 certificates to these places that have complied with the law, and 323 reports have been returned as incomplete. Certificates can not be issued to these until there has been compliance with the requirements. This leaves 293 places on which we have received no report for this year, not including a large number on which we undoubtedly have never received a report.

This department, as you know, has always followed the policy, when circumstances seemed to warrant it, of giving a place of business that was being conducted in violation of the sanitary law the choice of "closing up" until such time as it had been put in sanitary condition, or of standing prosecution. This has resulted in the closing up of a large number of hotels, restaurants, slaughterhouses, and practically all classes of business. Reports on all of these are not available, but there has been reported so far this year a total number of forty-four places closed, of which 14 were hotels.

This does not include the great number of places temporarily closed and required to be "cleaned out" before our inspector leaves town. The inspector is thus enabled to make the second inspection of such places, allow them to reopen if the conditions seem to warrant, and report accordingly.

#### LINSEED OIL AND TURPENTINE LAW.

This law, passed by the legislature in 1911, has now been in force a year. This time has been spent in educating the trade, so far as we have been able through our inspectors and publication in the *BULLETIN*, in order to give them time to adjust themselves to the new conditions and comply with the law's requirements. It must be seen at once that this has been a large task for this department, for the reason that linseed oil and turpentine are handled in several lines of business that are not affected by any other law we have to enforce, and as a consequence are never inspected by our inspectors. During the year a large number of samples have been collected and the analysis of these reported in the *BULLETIN*. This law, together with an explanation and advice as to the law's requirements, was also published, and it is now felt that there is little reason why any one should not know and comply strictly with the requirements.

Fifty-two samples of linseed oil and five samples of turpentine have

been analyzed with the following results: Linseed oil, 30 passed, 22 illegal; turpentine, 5 passed, none illegal.

As most of this oil is shipped through interstate commerce, we have no jurisdiction over it until it is received in the state and offered for sale, and as these analyses show these products are adulterated to a great extent, it can be readily seen that it is necessary for dealers to exercise great care in their buying and *Know* what they are selling.

Taking into consideration all the work done by this department during the past eighteen months, I feel that great results have been obtained. Our inspectors have been covering their territories thoroughly, and by hard, earnest work have been getting "results," and what is to be more appreciated than anything else is the fact that in the enforcement of these laws the different lines of business most affected are the ones asking for their enforcement, and are ever ready to stand back of the department in helping to make them as effective as possible. It is a protection to all legitimate business.

Respectfully submitted.

J. FLOYD TILFORD,  
Asst. Chief Food and Drug Inspector.

### FOOD AND DRUG PROSECUTIONS TERMINATED, JANUARY 1 TO JULY 1, 1912.

#### *Name, address, case and termination.*

Joseph Baer, Beattie, eggs unfit for food. Minimum and costs.  
A. Ballard, Barnes, adulterated vinegar. \$1 and costs.  
Sherman Pettit, Horton, adulterated vinegar. \$10 and costs.  
W. A. Putcamp, Horton, colored and polished pecans. \$10 and costs.  
Gus Vasilas, Coffeyville, unprotected candy and dates. \$5 and costs.  
W. A. Karbe, Pittsburg, unprotected food products. \$5 and costs.  
H. M. Fleming, Pleasanton, misbranded and adulterated powdered sugar. Minimum and costs.  
E. A. Drollinger, Wichita, adulterated milk. \$12.50 and costs.  
J. N. Jurgens, Wichita, adulterated milk. \$15 and costs.  
E. A. Drollinger, Wichita, adulterated milk. \$12.50 and costs.  
Pat Conley, Wichita, adulterated milk. Dismissed upon payment of costs.  
C. H. Dobbs, Emporia, keeping for sale food which was deleterious to health. \$5 and costs.  
Pearson Brothers, Osawatimie, selling coated rice. \$1 and costs.  
New York Mercantile Company, Beloit, misbranded lemon extract. \$5 and costs.  
Chas. Strohm, Waldo, sale of rotten eggs. \$1 and costs.  
Geo. H. Dunsmore, Long Island, pickles processed with alum. \$10 and costs.  
C. W. Granger, Vermillion, adulterated vinegar. \$1 and costs.  
N. S. Slack, Blue Rapids, adulterated vinegar. \$5 and costs.  
John Doe (name unknown), Sumner county, rotten fruit from car. Fine and costs.  
O. B. Dokam, Parsons, misbranded maple syrup. \$5 and costs.

### PROSECUTION OF INSANITARY PLACES, 1912.

Walter Bell, Coffeyville, insanitary refrigerator. \$5 and costs.  
M. L. Probst, Pittsburg, insanitary refrigerator. \$5 and costs.  
Geo. Lieser and J. W. Nash, Hutchinson, insanitary grocery store. \$10 and costs.  
S. J. Moxley, Solomon, insanitary conditions. \$10 and costs.  
J. L. Shaffer and S. S. Demetz, Washington, insanitary slaughterhouse. \$10 and costs.  
N. M. Hartwell, E. E. Knox and M. N. Lenpold, Frankfort, insanitary slaughterhouse. \$5 and costs.  
E. Matthewson, Hiawatha, dirty slaughterhouse. \$10 and costs.  
John Bohner, Hiawatha, dirty restaurant. \$10 and costs.  
M. F. Mallinowsky, Hiawatha, dirty bake shop. \$10 and costs.  
A. M. Cryderman, Neodesha, insanitary slaughterhouse. \$50 and costs.  
L. E. Howarth, Atchison, insanitary grocery store. \$10 and costs.  
C. V. Jacobs, Atchison, insanitary bakery. \$10 and costs.  
E. C. Overmiller, Atchison, insanitary bakery. \$10 and costs.  
W. D. Mark, Holton, insanitary restaurant. \$32 and costs.  
Harner, Hanseman & Mace, Clay Center, insanitary slaughterhouse. \$10 and costs.  
Lawrence Caine, Independence, insanitary slaughterhouse. \$5 and costs.  
J. L. Goodman, Galena, insanitary restaurant. Fine and costs.  
Cyrus Leland, Jr., Troy, insanitary slaughterhouse. Dismissed.  
Julius Shaeffer, Wichita, insanitary restaurant. \$15 and costs.  
Pat Oliver, Wichita, insanitary restaurant. \$15 and costs.  
See list (21 cases), Emporia, barber shop. Each barber \$5 and costs.

## HOTEL PROSECUTIONS FOR 1912.

Wm. Stelter, Hoisington, hotel law. \$50 and costs.  
 Mrs. Earl Werner, and Mr. and Mrs. W. H. Baldwin, Wichita, short sheets and non-compliance fire-protection requirement. \$20 and costs.  
 Ernest Bertschinger, Mrs. Getts and J. Plasterer, Wichita, hotel insanitary; blind rooms. \$20 and costs.  
 J. C. Willis, Wichita, hotel insanitary, and noncompliance fire-protection requirements. \$20 and costs.  
 Mrs. Florence Moore, Wichita, insanitary hotel, and noncompliance fire-protection requirements. \$20 and costs.  
 J. Frank Baker, Ellsworth, dirty kitchen. \$10 and costs.  
 Cora Steffins and Mrs. W. S. Parris, Wichita, hotel. \$10 and costs.  
 W. C. Kemp, Wichita, hotel. \$10 and costs.  
 C. S. Harrington, Wichita, hotel. \$20 and costs.  
 J. P. Johnson and L. M. Miller, Wichita, hotel. \$20 and costs.  
 Emma Henderson, Arkansas City, hotel. \$10 and costs.  
 Jacob Foster, Abilene, common towel. \$10 and costs.  
 Frank Hobart, Glen Elder, fire-protection law not complied with. \$50 and costs.  
 Tom Ferson, Pittsburg, dirty kitchen. \$5 and costs.  
 Guy McCandless and J. J. McCandless, Wichita, blind rooms and short sheets. \$10 and costs.

## WEIGHTS AND MEASURES PROSECUTIONS, 1912.

J. E. Kinney, Arkansas City, short-weight bread. Minimum and costs.  
 John Stook, Topeka, short-weight apples. \$5 and costs.  
 Oswego Seed and Grain Company, Oswego, short weight chops. \$5 on each count.  
 J. M. Davison, Everest, short-weight bread. \$10 and costs.  
 French Johnson, Cheney, short-weight bread. \$10 and costs.  
 James Kelley, Chanute, short-weight apples. \$15 and costs.

## SCALES, WEIGHTS AND MEASURES CONDEMNED, 1912.

## January:

Theo. Meinke, Linwood. 1 counter platform scale.  
 Corum Brothers, Munsey. 1 counter platform scale.  
 Young & Richardson, Havensville. 1 hanging meat scale.  
 G. F. King, Holton. 1 even-balance scale.  
 Hinnens Sons, Holton. 1 even-balance scale.  
 John Kauls, Holton. 1 even-balance; five weights.  
 M. M. Manion, Humboldt. 1 platform scale; 1 50-lb. weight.  
 Baker & Stephens, Erie. 1 computing scale, 7 weights.  
 L. W. Wilmoth, Mound Valley. 1 peck bottomless measure; ½-peck bottomless measure.  
 G. H. Dieterich, Altamont. 1 Stimpson computing scale; five weights.  
 G. P. Roberts, McCune. 5 weights.  
 C. F. Webb & Co., Toronto. 4 weights.

## February:

H. Garland, Fredonia. Hanging counter scale.  
 Learning & Vogell, Fredonia. Dayton computing scales; short weight.  
 Artimes & Garcia, Neodesha. American platform scale.  
 Adam Loch, Chanute. 1 bottomless measure.  
 Frank H. Burnett, Benedict. 1 cup pint measure.  
 B. Brann, Michigan Valley. 1-spring scale.  
 Missouri Pacific Railway Company, Overbrook. 1 stock yards scale.  
 H. G. Wengerd, Navarre. 1 Stimpson scale No. 700,877.  
 A. B. Hamacher, Sabetha. 1 hanging meat scale.  
 John Kaul & Sons, Holton. 1 even-balance iron.  
 W. Y. Olmstead, Garnett. 1 Px. scale; full set Px. weights taken up.  
 Ferril Drug Company, Chanute. 10 Px. weights.  
 J. M. Holzapfel, Colony. 1 Px. scale; 5 Px. weights.  
 Doctor Taylor, Caney. 6 Px. weights.  
 Farnsworth Drug Company, Hoisington. 1 Px. balance.  
 C. E. Holmes, Great Bend. Px. balances.  
 J. A. Stockenberg, Lindsborg. Metric Px. weights.

## March:

City Drug Company, White City. 1 Px. scale; 4 Px. weights.  
 Jas. G. Durham, Douglass. 1 Px. scale; 7 Px. weights.  
 Ford Bolton, Towanda. 1 prescription scale. 5 Px. weights.  
 P. E. Holmes, Douglass. 4 Px. weights.  
 Mr. Ireland, Wellsville. Px. scale.  
 Parkers Pharmacy, Kansas City. 1 Px. balance.  
 W. C. Butts, Kansas City. 1 Px. balance.  
 Geo. H. Fells, Independence. Dayton counter candy scale.  
 W. M. Bulmer, Independence. 1 bottomless peck measure.  
 C. A. Weaver, Independence. 1 bottomless peck measure.  
 E. E. Bowen, Monrovia. 1 iron platform counter scale.  
 D. Richter, Effingham. 1 National automatic computing hanging meat scale.  
 J. W. Keats, Parnell. 1 even-balance scale; 8 weights.

**March:**

J. H. Ryan, White Cloud. 1 Turnbull platform scale.  
 Wm. Ward, Severance. 1 hanging meat scale.  
 Wm. W. Erskine, Wathena. 1 computing meat scale.  
 Cawood Brothers, Wetmore. 1 Turnbull platform meat scale.

**April:**

F. P. Barrett & Son, Atchison. 6 weights; poise on one scale.  
 W. H. Avenberg, Atchison. 4 weights.  
 John Flemming, Atchison. 1 weight.  
 E. Ebner, Atchison. 6 weights.  
 Chas. H. Helper, Frankfort. 5 weights.  
 Barrett & Wasman, Frankfort. 4 weights.  
 G. A. Kircher, Centralia. 1 "Elkart" spring computing scale.  
 Wm. Mienarin, Home. 1 hanging spring meat scale.  
 Chanute Grain Company, Chanute. 8 measures.  
 Dewey & Hessel, Cheney. 1 cup measure.  
 H. N. Holcomb, Castleton. Two cup measures.  
 Schwartz & Albright, Pretty Prairie. 1 cup measure.  
 B. C. Beal, Clearwater. 1 Px. balance.  
 W. P. Ball, Longton. 1 Px. scale.  
 Norman E. Engle, Manhattan. 1 Px. balance.  
 Arthur C. Brown, Osage City. 1 Px. balance.  
 Albert J. Stratton, Reading. 1 Px. scale.  
 Grant & Imes, Beagle. 1 equal-arm balance scale.  
 Green Drug Company, Green. 3 weights.  
 Pioneer Drug Company, Clay Center. 5 weights.  
 A. Jennings, Clay Center. 10 weights.  
 Fullington & Held, Clay Center. 4 weights.  
 Wharton Drug Company, Lyons. 7 weights.  
 Lyons Drug Company, Lyons. 4 weights.  
 J. E. Smith, Lyons. 7 weights.  
 Cook & Dodge, Sterling. 1 weight.  
 J. W. Duff, Sterling. 5 weights.  
 Palace Drug Company, Geneseo. 10 weights.  
 Geneseo Drug Company, Geneseo. 7 weights.

**May:**

W. E. Keef, Glen Elder. 8 Px. weights.  
 Kent-Long Drug Company, Beloit. 9 Px. weights.  
 The Corner Pharmacy, Beloit. 5 Px. weights.  
 Bunch Drug Company, Beloit. 3 Px. weights.  
 J. G. Trueblood, Glen Elder. 9 Px. weights.  
 O'Brien Pharmacy, Beloit. 4 Px. weights.  
 Baldwin Pharmacy, Osborne. 16 Px. weights.  
 J. B. Hatfield, Osborne. 2 Px. weights.  
 Dryden Drug Company, Stockton. 9 Px. weights.  
 G. R. Thomason, Stockton. 1 pair Px. scale.  
 Mills Drug Company, Fortis. 18 Px. weights.  
 Palace Pharmacy, Cedar. 3 Px. weights.  
 B. H. Hockett, Cawker City. 1 Torison Px. balance.  
 W. S. Wuisberry & Co., Cawker City. 5 Px. weights.  
 City Pharmacy, Downs. 1 Px. weight.  
 Rexall Drug Company, Downs. 2 Px. weights.  
 Kirwin Drug Company, Kirwin. 5 Px. weights.  
 C. W. Dremer, Edna. 1 5-lb. weight.  
 I. M. Sharp, Bigelow. 1 computing spring scale.  
 R. L. Tays, Herkimer. 1 counter platform Buffalo scale.  
 A. J. Leonard, Blaine. 1 hanging computing scale.  
 J. C. Gordon, Westmoreland. 1 Stimpson hanging meat scale.  
 Chas. Hofmann, Green. 1 Stimpson Elkhart scale.  
 F. O. Fence, Idana. 1 John Chatillon platform meat scale.  
 T. J. Nutter, Morrowville. 1 hanging meat scale.  
 G. H. Grieve, Longdon. Px. scale.  
 Standard Milk Company, De Soto. 1 small platform scale.  
 J. H. Grace, Admire. 1 Stimpson scale.  
 O. A. Weisman, Hays. 1 Stimpson scale.  
 J. L. Dragoo, Quinter. 1 Stimpson scale.  
 J. H. Myers, Great Bend. 1-pound scale weight.  
 W. L. Curtis, Garfield. 1 K. C. computing scale.  
 J. Dillon Mercantile Company, Sterling. 1 Standard computing scale.

**June:**

J. L. McCormick, Phillipsburg. 5 Px. weights.  
 Holmes Drug Company, Phillipsburg. 10 Px. weights.  
 Nyal Drug Store, Norton. 1 Px. weight.  
 M. L. Stone, Wamego. Px. scale.  
 Verner Alquist, Clay Center. 1 weight.  
 H. E. Carter, Clay Center. 1 even-balance iron scale; 3 weights.  
 John Hostinsky, Cuba. 1 Dayton scale.  
 Jessie Harvey, Meriden. 1 National computing scale.  
 Bennett's Bakery, Galena. 4 scales.  
 Fred Volz, Galena. John Chatillon butcher's scale.  
 Don Moore, Galena. 1 cup measure.

## REPORT OF STATE REGISTRAR.

*To the State Board of Health:* TOPEKA, KAN., August 1, 1912.

GENTLEMAN—After an effort of six years, Kansas has a vital statistics law that in most respects is similar to the model law recommended by the Bureau of the Census, the American Medical Association, and the American Public Health Association. The legislature in passing this act, however, made some minor changes, only one of which was of serious import, and that was in section 4, in limiting the number of registrars to the city clerks of incorporated cities.

This law, chapter 296, Laws of 1911, became effective on July 1, 1911, with an appropriation of \$2500 per year provided by the legislature. It had been estimated that not less than three clerks in addition to the state registrar would be required to do the work of the central bureau. This help could not be provided from the appropriation of \$2500, and it was a matter of earnest discussion among the officials of the department as to whether or not it was wise to put the law into operation. After several conferences with the governor and state auditor it was determined to ask the Board for authority to employ one clerk out of the tuberculosis fund, as the data secured by the operation of this law would be of immense assistance in the enforcement of the tuberculosis registration law, and one clerk to be carried out of the emergency fund. After the securing of this authority and the exercise of other unusual means, it was determined to make the effort to enforce the law, even thus inadequately equipped with help.

Copies of blanks for the use of the local registrars were prepared and sent to the state printer about May 15, but as he was without funds, nothing could be done at that time, and all copy was returned. But promptly on July 1, the beginning of the new fiscal year, they were again sent to the state printer, and on August 9 a portion at least of all of the blanks for the use of the local registrars had been received at this office, and on that date a complete package of supplies was sent to each of the 485 local registrars. By correspondence with the county clerk of each county, a list of the incorporated cities had been obtained, and the state was divided into registration districts surrounding these incorporated towns, as provided by section 3 of the law, the city clerks of which were under provision of the law local registrars. Correspondence was then entered into with these clerks, and they were informed of their duties under the law, and were asked to file their names and addresses with the central bureau.

With the supplies sent to the local registrars were sent the following circular letters and a suggested article for publication in the local papers:

"TO LOCAL REGISTRARS:

"For the purpose of putting into effect the provisions of chapter 296, Laws of 1911, the following suggestions are made to local registrars:

"First, carefully read over the law, rules and regulations, and study their provisions, that you may be enabled intelligently to answer questions which are sure to be asked of you.

"The law provides in section 11 that each physician, midwife and undertaker shall register with you, and shall thereupon receive a copy of the law, together with such rules and regulations, forms, etc., as are to be supplied to them. To secure these registrations is the first step in the enforcement of the law, and it is suggested, where it is convenient so to do, that the registrar make it a point to call upon the parties interested, secure their registration, supply them with blanks, and incidentally secure

their coöperation and good will at the same time. This will undoubtedly make for a much better observance of the law. In any event, these registrations must be secured and the supplies issued as promptly as possible.

"Particular attention should be paid to securing the registration of all midwives. There is no law on the statute books that in any way governs this practice except the vital statistics law, which requires their registration, and prompt complaint should be filed with the county attorney for any practice on the part of these people without registration.

"It is further suggested that the widest possible publicity be given this law in your community through the press, as it will very greatly aid in its enforcement.

"Registrars are only required to register and supply those physicians, midwives and undertakers resident in their district and the cemeteries located within the district; those who practice in the district who reside outside of it will be supplied by their own registrar.

"Keep close track of your supplies and order additional quantities in ample time to supply the demand. Please do not fold certificates; use the large envelopes and send them in *flat*.

"The division of territory prescribed does not in any way affect the practice of physicians and undertakers beyond designating the proper place of registration, and a burial permit issued by any registrar for a death occurring in his district will be accepted by the sexton of any cemetery within the reach of a private conveyance, and a common carrier is not employed for transportation.

"As soon as certificates are received they should be entered in the proper book (birth or death record) and then filed, and on the fifth of the next month carefully checked and a statement made on the proper blank, and all sent in to the state registrar.

Yours cordially,

W. J. V. DEACON, *State Registrar.*"

*"Memorandum for Distribution of Supplies.*

"Local registrars shall make distribution of supplies for the purpose of putting into effect the vital statistics law, as follows:

"To each physician: One tab birth certificates, one tab death certificates, one copy of the law.

"To each midwife: one tab birth certificates; one copy of the law.

"To each undertaker: one tab death certificates; one copy of the law.

"To each cemetery: one cemetery record; one copy of the law.

"In addition to which the local registrar retains for his own use: No report cards; statement of returns; large addressed envelopes; death-record book; birth-record book; supplemental birth reports; book of burial permits; register of physicians, etc; copy of the law; international classification of causes of death."

*Suggested article for publication.*

"The vital statistics law, compelling the registration of all births and deaths in Kansas, passed by the last legislature, went into active operation to-day upon the shipment of the registration blanks by the State Board of Health to the 478 registrars of the state. The law went into effect July 1, but the fact that the state printer has been crowded with work has delayed the printing of the blanks. The law specifies that registrations certified on blanks other than those furnished by the state are not legal.

"Registrations are paid for from the general fund of the county, and there is no expense to the householder, the attending physician or midwife or to the undertaker. The fee is twenty-five cents.

"A total of 478 local registrars have been appointed by W. J. V. Deacon, the state registrar. This comprises the city clerks of every incorporated city in Kansas. Each one is also given such territory contiguous to the city as is assigned to him by the State Board of Health. For probably three hundred years civilization has tried to devise some

means of getting a complete and perfect record of deaths. The solution of the problem has been found in requiring a burial permit to be taken out before any disposition is made of the body. The granting of the permit is contingent upon the reporting of the death to the proper officials. This is the keynote of the law. The undertaker has ample opportunity to get the facts concerning the death from the relatives, and other detailed information, and he is required to gather it. The physician, of course, makes the medical report of the death.

"There are three first-class, important reasons, among others, why deaths should be recorded. Named in the increasing order of their importance they are:

"To keep track of the movement of the population, or what is known as the demographic value.

"The sanitary value, which teaches where the plague spots are and gives opportunity for the installation of preventive measures.

"In the legal value importance attaches itself to the information in cases of inheritance by descent, in insurance matters and in the detection of criminal practice. There is no chance to hide away a body and 'forget it.'

"The responsibility for reporting deaths falls upon the undertaker. Heavy penalties are provided in the law for failure to report deaths, and punishment is also provided for failure to take out a burial permit before the body is interred or for permitting interment without a permit.

"Births are to be reported by the physician or midwife in attendance, and in the event of no medical attendance, or if no midwife is present, the father or mother must attend to the registration. A heavy penalty is attached to failure to make the proper report. Kansas at this time has no law regulating the practice of midwives, but the vital statistics law compels them to register, as well as every undertaker and physician, with the local registrar, and penalties are provided for practicing without registering.

"A host of good reasons marshal themselves up for the registration of births. Track can be kept of the movement of population. A large per cent of our practice in the courts requires a definite statement of age. Offenders in certain wrongful actions under the age of twenty-five go to the reformatory. It often costs the state much money to determine these ages. District judges in Kansas have said that the faulty memories of parents often causes much trouble and expenditures in learning the correct ages of the offenders. It is asserted that there are men in the penitentiary to-day because ages could not be proven. On the civil side of the legal phase there are certain cases coming up in relation to property rights in which ages are of great importance. The rights of a minor are maintained in certain instances a year after the age of majority has been attained. Suppose a case appears in which an attempt is being made to cheat an heir out of property where the age is of vital importance. Right there an official authentic record could shape the determination of a whole dispute with no loss of time and no question of accuracy. There are always cases in inheritance where descent and age are necessary and desirable. The courts are continually demanding certificates of births and deaths.

"A striking example of the need of a vital statistics law came up recently in Topeka. A young man and his parents moved back to Europe. The parents were born across the sea, but the son was born in Topeka. The latter desired to come back to Topeka for his education. He landed at Ellis Island, and had just enough money to get to Topeka, and the immigration officers raised the question of his being an indigent foreigner. He insisted that he was born in Topeka, but had no proof of it. Efforts were made in this city to get the facts about the matter, but nothing could be found until Father Hayden became interested in the case. He searched the records of his parish for a week, and finally located the midwife who attended at his birth, and seventeen years after he was born the fact of his birth was registered and he was permitted to enter his

native land. That was a striking example of the need of a vital statistics law.

"There is another argument cited which can not be improved on. For years it has been the custom to register horses, cattle, hogs and other live stock, but the human race has not until now seen fit to spend twenty-five cents for the registration of a birth or death."

In most places registration began at once, as evidenced by the fact that 896 deaths and 136 births were reported for the part month of August. In some localities, however, through misunderstanding or inefficiency on the part of the local registrar, the work was delayed, but before September 1, 1911, registration was general over the state. With the beginning of the actual work of registration the office was flooded with letters of inquiry from local registrars, undertakers, physicians and sextons of cemeteries, resulting in a great burden of correspondence. But as registration got well under way it became more and more apparent that the limitation of the local registrars to the number of incorporated towns was a serious mistake, as in many instances a great hardship was created on undertakers and others responsible under the law, several instances being recited where it was necessary to drive from sixty to one hundred miles in order to comply with all the requirements of the law and secure a burial permit. Seventeen counties have but one registration point, namely: Finney, Geary, Grant, Gray, Haskell, Hodgeman, Lane, Morton, Scott, Seward, Sherman, Stanton, Stevens, Thomas, Trego, Wallace, and Wichita. Of this number, several counties have no incorporated town and arrangement was made for the county clerk to act as local registrar. It will be noted that all of the above counties are large counties geographically. The question of registration is one of area rather than of population, as one registrar can take care of a population of ten thousand quite as easily as he can of one; it is a question of having registrars located at such convenient points that no hardship will be created in complying with the law. So serious did this question become on September 8 the state registrar addressed the following letter to the attorney-general:

*"Hon. John Dawson, Attorney-general, Statehouse:*

"DEAR SIR—I desire to invite your attention to section 4 of chapter 296, Laws of 1911, which provides that the city clerk in each incorporated city shall be the local registrar of vital statistics. In the operation of the law the unfortunate fact exists that this does not make a sufficient number of registrars in the state to handle the business, and the law creates a great hardship upon undertakers and others concerned in the difficulty of securing the necessary burial permits.

"You will note that by section 1 of this act the State Board of Health is authorized to make rules and regulations for carrying out the provisions thereof, and I desire to ask your opinion as to whether or not a regulation that would permit the city clerks, as local registrars, to appoint deputies in certain localities where needed, said deputies to be subject to the approval of the Board, would be in order. I assume that such deputies would have to act in the name of the local registrar, as there seems to be no provision for the delegation of authority to sign burial permits.

"I will be pleased to have your opinion on this subject at your early convenience.

Very truly yours,

W. J. V. DEACON, *State Registrar.*"

To which the following reply was received:

"SEPTEMBER 9, 1911.

*"Hon. W. J. V. Deacon, State Registrar of Vital Statistics, Topeka, Kan.:*

"MY DEAR SIR—Your letter of September 8, 1911, received.

"By section 1 of said statute the Board of Health is authorized and directed to make such rules and regulations, not in conflict with the laws of the state, for carrying out the provisions of the act, and said section makes a violation of said rules a misdemeanor.

"Section 4 of the act makes the city clerk of each incorporated city the local registrar of vital statistics, and he may issue burial permits and receive birth certificates for any part of his county. Nowhere does the act expressly provide that there shall be no other local registrar than the various city clerks, and nowhere does it expressly provide for the appointment of local registrars other than the city clerks. While such local registrars are paid out of the general fund of the various counties, the number of registrars in no case can affect the amount to be paid. If there is only one registrar in a county, and he does his duty, he would receive as much compensation as a dozen registrars would receive.

"I think the State Board of Health has the power and authority to authorize the various city clerks to appoint such assistants as may be necessary to enable them to perform the various duties placed upon them by the provisions of this act. Such assistants can be stationed at convenient points, and these assistants can act for and in the name of the local registrar for that district. Yours truly,

JOHN S. DAWSON, *Attorney-general.*"

In accordance with this opinion, the state registrar recommended to the State Board of Health, at its regular quarterly meeting held at Manhattan on October 20, the adoption of regulation 20, which reads as follows:

"City clerks, as local registrars, are hereby authorized to appoint such assistants, who shall be known as subregistrars, in such localities distant from the registration center as may be necessary to serve the convenience of those having business therewith. All appointments are to be approved by the state registrar and shall serve during his pleasure.

"These subregistrars are to act for and in the name of the local registrar for that district in receiving birth and death certificates and the issue of burial permits only.

"Each subregistrar is required to make report and forward all certificates and papers to the local registrar for whom he is acting, not later than the last day of each month."

This regulation was duly adopted and published. Where this was put into operation the effect was immediately beneficial and complaint ceased almost entirely.

Between the beginning of registration and December 31 there were reported 11,555 births and 6296 deaths. Owing to the fact, however, that there was some confusion of date as to the beginning of registration, these figures are of little statistical value. However, there will be found a list of the causes of death, age, sex, color, social condition, nativity, and occupation for this period, following.

On the suggestion of the Bureau of the Census, on January 1 the cities above ten thousand were segregated from the districts in which they were located, in order that we might determine the death rate in these larger cities as distinguished from the general death rate over the state.

The advice and hearty coöperation of Dr. Cressy L. Wilbur, chief statistician for vital statistics of the Bureau of the Census, have been of great aid in the administration of the law, the bureau furnishing each physician in the state with a vest-pocket copy of the International Classification of the Causes of Death, and on April 2 sending the following letter to every physician, registrar, undertaker and others interested in the law, which undoubtedly was of immense value in securing the hearty coöperation of those addressed:

"DEAR SIR—The complete and correct registration of all births and deaths is most essential to the welfare of the state and to the protection of the legal and personal rights of the people. The information secured from an effective system of registration is indispensable for practical sanitary purposes. In no other way can it be known in just what parts of the state certain diseases are most fatal, and hence where the most

active efforts should be made to restrict them. Without complete registration of births no comparable statistics of infant mortality can be had, and hence the larger number of deaths of infants from preventable causes can not be diminished as rapidly as if a complete knowledge of the extent and causes of infant mortality were available.

"Under the present Kansas law births and deaths are recorded by immediate registration—the only efficient method—upon standard birth and death certificates such as are employed in registration states and approved by the United States Bureau of the Census. As soon as the law is thoroughly enforced throughout the state, so that practically no deaths can occur without a proper legal record, Kansas will become eligible for admission to the registration area, which now includes twenty-two states in which laws having substantially the same requirements as the Kansas act have been successfully enforced. The state will then be represented in the annual mortality statistics published by the Bureau of the Census, and its vital data will be available for use by citizens of the state for many important purposes.

"The success of the law depends upon the thorough enforcement and careful compliance with its provisions by all concerned, and especially by the physicians, widwives, undertakers, sextons, health officers and local registrars. The omission of the record of a single birth or death may be of the gravest importance to the individual or family affected, and hence a conscientious regard should be had to the registration and prompt return to the state registrar at Topeka of all births and deaths that occur. It is a matter not only of state but of national importance that the Kansas law should be effective, because upon the coöperation of the state in this respect the upbuilding of our national system of vital statistics is dependent. Hence I desire to ask your cordial interest and aid in the thorough enforcement of this law. Very respectfully,

CRESSY L. WILBUR, M. D., *Chief Statistician.*"

The necessity of making report at this time for the biennial, covering a period of but six months, makes the report of small statistical value. For instance, the report shows but 96 deaths from typhoid fever for the six months ending June 30, 1912, whereas the part of 1911, covering a part of August and the following months of the year, showed 297 deaths from typhoid fever. This is largely due to the fact that the typhoid season very largely follows the fly season, and the later months of the summer will show an increased death rate from this cause. The few deaths from this cause have been scattered quite generally over the state; in no case has there been the appearance of an epidemic. The deaths from all epidemic diseases have been somewhat small, with the exception of whooping cough, of which there were eighty-five deaths reported, more than of any other one of the communicable diseases, with the exception of tuberculosis. The early part of the year there was a severe epidemic of cerebrospinal meningitis at Kansas City and some other points. Owing to the fact, however, that this report shows such a limited time, it has not been deemed wise to attempt to make any systematic study of the causes of death.

Since the law became operative there have been eight cities newly incorporated, and two have surrendered their incorporation, so at this time there are 491 registrars.

The state registrar respectfully urges the necessity of amending section 4 of the law to provide for the appointment of registrars wherever they may be needed, and provision should be made for at least one registrar in each township if the conditions warrant. In some states it has been found that the justice of the peace of the township makes an acceptable registrar. The appointment of subregistrars should be covered by statute. Respectfully submitted.

W. J. V. DEACON, *State Registrar.*

6.—*Nonvenereal Diseases of the Genito-urinary System and Annexa.*

Cysts and other tumors of the ovary, .....	3
Other diseases of the female genitals, .....	2

7.—*The Puerperal State.*

Accidents of pregnancy .....	5
Puerperal hæmorrhage .....	5
Other accidents of labor .....	5
Puerperal septicæmia .....	27
Puerperal albuminuria and con- vulsions .....	17
Puerperal phlegmasia, etc. ....	3
Following childbirth .....	3
Puerperal diseases of the breast .....	1

8.—*Diseases of the Skin and of the Cellular Tissue.*

Gangrene .....	11
Other diseases of the skin and annexa, .....	5

9.—*Diseases of the Bones and of the Organs of Locomotion.*

Diseases of the bones .....	7
Diseases of the joints .....	1
Other diseases, organs of locomotion, .....	1

10.—*Malformations.*

Congenital malformations .....	23
--------------------------------	----

11.—*Diseases of Early Infancy.*

Congenital debility, icterus, and sclerema .....	453
Other diseases peculiar to early infancy .....	74
Lack of care .....	25

12.—*Old Age.*

Senility .....	230
----------------	-----

13.—*Affections Produced by External Causes.*

Suicide by poison .....	35
Suicide by asphyxia .....	3
Suicide by hanging or strangulation, .....	11
Suicide by drowning .....	1
Suicide by firearms .....	30
Suicide by cutting or piercing .....	3
Other suicides .....	4
Poisoning by food .....	10
Other acute poisonings .....	17
Conflagration .....	5
Burns (conflagration excepted) .....	41
Absorption of deleterious gases .....	10
Accidental drowning .....	21
Traumatism by firearms .....	38
Traumatism by cutting or piercing .....	2
Traumatism by fall .....	36
Traumatism in mines and quarries .....	16
Traumatism by machines .....	7
Traumatism by other crushing .....	95
Injury by animals .....	23
Starvation .....	1
Excessive cold .....	5
Effects of heat .....	17
Lightning .....	5
Electricity (lightning excepted) .....	6
Homicide by firearms .....	14
Homicide by cutting or piercing .....	1
Homicide by other means .....	12
Fractures (cause not specified) .....	42
Other external violence .....	19

14.—*Ill-defined Diseases.*

Ill-defined organic disease .....	16
Sudden death .....	14
Cause of death not specified, or ill- defined .....	89

Total ..... 6,295

## BIRTHS.

Births .....	11,555	White .....	11,323
Male .....	6,808	Black .....	232
Female .....	5,475	Stillbirths .....	392

## CLASSIFICATION OF DEATHS.

FOR SIX MONTHS ENDING JUNE 30, 1912.

AGES OF DECEASED.		OCCUPATIONS OF THE DISEASED.	
Under 1 year .....	1,443	Clerks (store) .....	32
Between 1 and 2 years .....	373	Collectors .....	4
Between 3 and 5 years .....	183	Commercial travelers .....	12
Between 6 and 10 years .....	142	Contractors .....	19
Between 11 and 15 years .....	156	Cooks .....	20
Between 16 and 20 years .....	282	Coopers .....	5
Between 21 and 25 years .....	324	Dentists .....	6
Between 26 and 30 years .....	315	Dressmakers .....	12
Between 31 and 35 years .....	334	Drivers and liverymen .....	47
Between 36 and 40 years .....	316	Druggists .....	21
Between 41 and 45 years .....	303	Editors and writers .....	8
Between 46 and 50 years .....	347	Electrical workers .....	2
Between 51 and 60 years .....	894	Engineers .....	30
Between 61 and 70 years .....	1,273	Farmers .....	1,657
Between 71 and 80 years .....	1,531	Firemen .....	9
Between 81 and 90 years .....	743	Glass workers and blowers .....	2
Between 91 and 100 years .....	91	Harness workers .....	3
Over 100 years .....	8	Hotel and restaurant keepers .....	20
Unknown .....	31	Housewives .....	2,820
<b>Total .....</b>	<b>9,089</b>	Hucksters .....	3
SEX.		Insurance agents .....	10
Males .....	4,899	Iron and steel workers .....	7
Females .....	4,190	Janitors .....	23
<b>Total .....</b>	<b>9,089</b>	Jewelers and watchmakers .....	4
COLOR.		Laborers .....	881

		<b>Total .....</b>	<b>9,089</b>

## CLASSIFICATION OF DEATHS—CONTINUED.

## NUMBER AND CAUSES. (International classification.)

1.—General Diseases.		4.—Diseases of the Respiratory System.	
Typhoid fever	96	Diseases of the nasal fossae	3
Malaria	8	Diseases of the larynx	9
Measles	57	Diseases of the thyroid body	5
Scarlet fever	33	Acute bronchitis	59
Whooping cough	85	Chronic bronchitis	78
Diphtheria and croup	66	Bronchopneumonia	418
Influenza	89	Pneumonia	576
Dysentery	20	Pleurisy	8
Erysipelas	26	Pulmonary congestion or apoplexy	57
Purulent infection and septicæmia	37	Gangrene of the lung	2
Glanders	1	Asthma	20
Rabies	1	Pulmonary emphysema	17
Tetanus	18	Other respiratory diseases	3
Pellagra	1		
Tuberculosis of the lungs	532		
Acute miliary tuberculosis	18	5.—Diseases of the Digestive System.	
Tuberculous meningitis	32	Diseases of the mouth and annæxa	3
Abdominal tuberculosis	23	Diseases of the pharynx	4
Pott's disease	8	Ulcer of the stomach	25
White swellings	3	Other diseases of the stomach	76
Tuberculosis of other organs	9	Diarrhœa and enteritis under 2	
Disseminated tuberculosis	7	years)	215
Ricketts	3	Diarrhœa and enteritis (2 years	
Syphilis	21	and over)	66
Gonococcus infection	2	Appendicitis and typhilitis	76
Cancer, etc., buccal cavity	10	Hernias, intestinal obstructions	85
Cancer, etc., liver	248	Other diseases of the intestines	11
Cancer, etc., intestines, rectum	69	Acute yellow atrophy of the liver	4
Cancer, etc., female genital organs	61	Hydatid tumor of the liver	1
Cancer, etc., breast	29	Cirrhosis of the liver	65
Cancer, etc., skin	2	Biliary calculi	41
Cancer, etc., other organs	98	Other diseases of the liver	59
Other tumors	4	Diseases of the spleen	1
Acute articular rheumatism	23	Simple peritonitis (nonpuerperal)	42
Chronic rheumatism and gout	48	Other diseases of the digestive system	5
Scurvy	1		
Diabetes	116	6.—Nonvenereal Diseases of the Genito-urinary System and Annæxa.	
Exophthalmic goitre	8	Acute nephritis	54
Addison's disease	2	Bright's disease	471
Leuchæmia	10	Other diseases of the kidneys	9
Anæmia, chlorosis	49	Calculi of the urinary passages	2
Other general diseases	14	Diseases of the bladder	24
Alcoholism (acute or chronic)	22	Diseases of the urethra, etc.	1
Chronic lead poisoning	3	Diseases of the prostate	23
Other chronic occupation poisonings	2	Uterine tumor (noncancerous)	6
Other chronic poisonings	2	Other diseases of the uterus	7
		Cysts and other tumors of the ovary	5
		Other diseases of the female genitals	5
2.—Diseases of the Nervous System and of the Organs of Special Sense.			
Encephalitis	28	7.—The Puerperal State.	
Simple meningitis, etc.	242	Accidents of pregnancy	7
Locomotor ataxia	11	Puerperal hemorrhage	14
Other diseases of the spinal cord	43	Other accidents of labor	9
Cerebral or hemorrhage apoplexy	500	Puerperal septicæmia	65
Softening of the brain	28	Puerperal albuminuria and con-	
Paralysis without specific cause	191	vulsions	26
General paralysis of the insane	15	Puerperal phlegmasia, etc.	7
Other forms of mental alienation	51	Following childbirth	2
Epilepsy	48		
Convulsions (nonpuerperal)	2		
Convulsions of infants	27	8.—Diseases of the Skin and of the Cellular Tissue.	
Chorea	3	Gangrene	17
Neuralgia and neuritis	11	Furuncle	3
Other diseases of the nervous system	18	Acute abscess	4
Diseases of the eye and their annæxa	1	Other diseases of the skin and annæxa	5
Diseases of the ears	4		
		9.—Diseases of the Bones and of the Organs of Locomotion.	
3.—Diseases of the Circulatory System.		Diseases of the bones	14
Pericarditis	5	Diseases of the joints	1
Acute endocarditis	32	Other diseases, organs of locomotion	1
Organic diseases of the heart	798		
Angina pectoris	71	10.—Malformations.	
Diseases of the arteries, atheroma, etc.	117	Congenital malformations	122
Embolism and thrombosis	29		
Diseases of the lymphatic system	3		
Other diseases, circulatory system	1		

## CLASSIFICATION OF DEATHS—CONTINUED.

<i>11.—Diseases of Early Infancy.</i>		<i>13.—Affections Produced by External Causes.</i>	
Congenital debility, icterus, and sclerema .....	552	Traumatism by cutting or piercing, .....	1
Other diseases peculiar to early infancy .....	41	Traumatism by fall .....	55
Lack of care .....	30	Traumatism in mines and quarries ..	19

# LIST OF THE CHIEF AND ASSOCIATE JUSTICES OF THE SUPREME COURT OF KANSAS.

## TERRITORIAL.

### CHIEF JUSTICES.

Hon. Samuel Dexter Lecompte, of Maryland.....	Jun. 11, 1854, to Mar. 9, 1859.
Hon. John Pettit, of Indiana.....	Mar. 9, 1859, to Jan. 29, 1861.

### ASSOCIATE JUSTICES.

Hon. Saunders W. Johnson, of Ohio.....	Jun. 11, 1854, to Dec. 4, 1855.
Hon. Jeremiah Murray Burrill, of Pennsylvania.....	Dec. 4, 1855, to Jan. 13, 1857.
Hon. Thomas Cunningham, of Pennsylvania.....	Jun. 3, 1857, to Jun. 3, 1857.
Hon. Joseph Williams, of Iowa.....	Jun. 13, 1857, to Jan. 29, 1861.
Hon. Rush Elmore, of Alabama.....	Jun. 11, 1854, to Dec. 4, 1855.
Hon. Sterling G. Cato, of Alabama.....	Dec. 4, 1855, to Jul. —, 1858.
Hon. Rush Elmore, of Alabama.....	Jul. —, 1858, to Jan. 29, 1861.

## STATE.

### CHIEF JUSTICES.

Hon. Thomas Ewing, jr.....	Jan. 29, 1861, to Oct. 20, 1862.
Hon. Nelson Cobb.....	Dec. 28, 1862, to Nov. 3, 1863.
Hon. Robert Crozier.....	Nov. 3, 1863, to Jan. 14, 1867.
Hon. Samuel Austin Kingman.....	Jan. 14, 1867, to Jan. 1, 1877.
Hon. Albert Howell Horton.....	Jan. 1, 1877, to May 1, 1895.
Hon. David Martin.....	May 1, 1895, to Jan. 11, 1897.
Hon. Frank Doster.....	Jan. 11, 1897, to Jan. 15, 1901.

### ASSOCIATE JUSTICES.

Hon. Samuel Austin Kingman.....	Jan. 29, 1861, to Jan. 9, 1865.
Hon. Jacob Safford.....	Jan. 9, 1865, to Jan. 9, 1871.
Hon. David Josiah Brewer.....	Jan. 9, 1871, to Apr. 9, 1884.
Hon. Theodore A. Hurd.....	Apr. 12, 1884, to Dec. 1, 1884.
Hon. William Agnew Johnston.....	Dec. 1, 1884, to Jan. 15, 1901.
Hon. Lawrence Dudley Bailey.....	Jan. 29, 1861, to Jan. 11, 1869.
Hon. Daniel Mulford Valentine.....	Jan. 11, 1869, to Jan. 11, 1895.
Hon. Stephen H. Allen.....	Jan. 11, 1895, to Jan. 9, 1899.
Hon. William Redwood Smith.....	Jan. 9, 1899, to Jan. 15, 1901.

### SUPREME COURT COMMISSIONERS.

Hon. Benjamin F. Simpson.....	Mar. 5, 1887, to Mar. 1, 1893.
Hon. Jeffrey B. Clogston.....	Mar. 5, 1887, to Mar. 1, 1890.
Hon. George S. Green.....	Mar. 1, 1890, to Mar. 1, 1893.
Hon. Joel Holt.....	Mar. 5, 1887, to Mar. 1, 1890.
Hon. Jeremiah C. Strang.....	Mar. 1, 1890, to Mar. 1, 1893.

### ENLARGED SUPREME COURT.

Hon. Frank Doster.....	Jan. 15, 1901, to Jan. 12, 1903.
Hon. William Agnew Johnston.....	Jan. 15, 1901, to Jan. —, 1913.
Hon. William Redwood Smith.....	Jan. 15, 1901, to Jul. 1, 1905.
Hon. Edwin W. Cunningham.....	Jan. 15, 1901, to Aug. 16, 1905.
Hon. Adrian L. Greene.....	Jan. 15, 1901, to Jul. 28, 1907.
Hon. Abram H. Ellis.....	Jan. 15, 1901, to Sep. 25, 1902.
Hon. John C. Pollock.....	Jan. 15, 1901, to Dec. 2, 1903.
Hon. Rousseau A. Burch.....	Sep. 29, 1902, to Jan. —, 1913.
Hon. Henry F. Mason.....	Jan. 12, 1903, to Jan. —, 1915.
Hon. William D. Atkinson.....	Jan. 1, 1904, to Dec. 1, 1904.
Hon. Clark A. Smith.....	Dec. 1, 1904, to Jan. —, 1915.
Hon. Silas Porter.....	Jul. 1, 1905, to Jan. —, 1917.
Hon. Charles B. Graves.....	Aug. 21, 1905, to Jan. 8, 1911.
Hon. Alfred W. Benson.....	Aug. 1, 1907, to Jan. —, 1915.
Hon. Judson S. West.....	Jan. 9, 1911, to Jan. —, 1917.

*To Hon. W. R. Stubbs, Governor of Kansas:*

SIR—I herewith respectfully submit the eighteenth bien-nial report of the condition of the State Library at the close of the fiscal year ended June 30, 1912.

## *Librarian's Report.*

---

In the general growth and advancement of the various institutions of Kansas the State Library has been a participant throughout all of the years following its establishment in 1862. Between the years 1862 and 1869 no printed reports were issued. The office of state librarian was created by the legislature in 1870, the duties of librarian up to that time having been performed by the territorial and state auditors. From 1870 to the present date seven annual and eighteen biennial reports have been issued by the librarian.

Beginning in 1862 with less than 5,000 volumes, the State Library has in the fifty years of its existence increased its collection to a total of 125,244 volumes. This number includes law books, public documents, miscellaneous books, medical books, pamphlets and charts, magazine files, legislative reference works and traveling library books. The total does not include duplicate copies of the library's own publications, nor duplicate sets of state documents carried for purposes of exchange with other libraries and institutions. Necessarily there has been some duplication in the traveling library department, where there has been a call for more than one copy of an important or popular book.

The estimated value of the library is \$250,000, although many of the publications in the law and miscellaneous sections could not be duplicated in the original editions at any price. The accessions in 1910-'12, covering all departments, amounted to 13,563—the largest growth the library has attained in any annual or biennial period in its history.

In order to accommodate the future expansion of the library it will be necessary to provide an additional stack for the shelving of books. The two large steel stacks provided when the library was transferred to its present quarters are already congested, and I respectfully recommend an appropriation by the incoming legislature of the sum of \$6000 for the erection of a third stack, corresponding in style and material to those now in use. Its erection is a needed facility in the proper

arrangement and handling of books, and will be in accordance with the original plan of the library room.

Within the past three years a new card catalogue of the law and miscellaneous collections has been completed and the general resources of the library made more available to the public. By classes, the library now contains:

Law and miscellaneous books.....	69,995
Medical works .....	3,114
Pamphlets .....	11,135
Traveling library books.....	41,000
Total.....	125,244

### SUPREME COURT REPORTS.

The sales of Supreme Court Reports during the two years ended June 30, 1912, amounted to \$4176, as follows:

	1910-'11.	1911-'12.
July .....	\$84 00	\$46 00
August .....	10 00	680 00
September .....	670 00	90 00
October .....	42 00	697 00
November .....	18 00	46 00
December .....	16 00	58 00
January .....	108 00	216 00
February .....	157 00	94 00
March .....	36 00	36 00
April .....	68 00	157 00
May .....	57 00	678 00
June .....	18 00	94 00
Totals .....	\$1,284 00	\$2,892 00

### SESSION LAWS.

The legislature of 1911 made an appropriation for printing 700 extra copies of the Session Laws of that year, to be sold by the state librarian. This number proved to be insufficient to meet the demand from attorneys and other patrons, and the edition is now exhausted. In all 703 copies were sold at \$2 each. The librarian also disposed of five copies of the Laws of 1907 and five copies of the Laws of 1909, at \$2 each, making the total proceeds from the sale of Session Laws \$1426, which amount was deposited in the state treasury to the credit of the general-revenue fund.

### STORMONT MEDICAL LIBRARY.

The medical section of the State Library was a donation made by Mrs. Jane Stormont, representing an original outlay of \$5000. It is maintained by the interest derived from an

additional sum of \$5000, also given by Mrs. Stormont. From this interest fund purchases were made in 1910-'12 to the amount of \$431.85.

Another valuable collection of text books was donated to the medical department in 1904 by Mrs. Ann Eliza Sheldon.

### LEGISLATIVE REFERENCE DEPARTMENT.

In the year 1909 the legislature made a small appropriation for a legislative reference department in connection with the State Library. The legislature of 1911 continued the appropriation and granted small increases intended to improve the mechanical facilities of the department. Only \$250 a year was allowed for the purchase of new material, but even with this small amount the librarian has been able to make valuable additions to the general resources of the State Library along legislative lines.

That the new department has been of considerable benefit to state officers and members of the legislature is freely admitted by all who have availed themselves of its privileges. The state officers and state commissions have been helped in gathering material for their special uses, and the public has in many ways had the benefit of the work of the department.

Prior to the session of 1911 a letter was sent to each member of the legislature asking him to make use of the material in the library, and tendering the assistance of the library force. By this means members were provided with information concerning matters of proposed legislation two months in advance of the meeting of the legislature. This information comprised statistics from all sources, copies of the laws of other states, and the latest and best material in book and magazine form concerning the subject under investigation.

During the session of 1911 the legislative reference department maintained a complete card index of all the measures introduced into the legislature, showing the reference to committees, reports of committees, action of the house and senate, and final disposition of each bill. The index was in daily use by the members and its utility frequently commended.

This service is not intended to supplant the work of the secretary of the senate or the chief clerk of the house, but is in addition thereto and along wholly different lines. At the close

of the session it constitutes a complete history of the legislation of that year, and is of assistance not only to members but to the officers of both houses and to the public at large. It is likewise a convenience to the succeeding legislature, as it includes a file of all bills introduced, whether enacted into laws or not. A similar index has also been prepared relating to the session of 1909.

When the legislature is not in session the material gathered by the reference department is available to colleges, public schools, municipal organizations, debating societies and study clubs throughout the state, and to all students of the public questions of the day.

### BUREAU OF INFORMATION.

The State Library is ready at all times to respond to any requisition that may be made upon it for information upon any question of public interest, or in regard to the laws of Kansas and other states, and to give in condensed form the results of experiments and investigations in the administration of public affairs, national, state and municipal. The library contains most of the federal and state documents. It has files of the leading periodicals, and is well supplied with pamphlets, reports of societies, monographs, and newspaper clippings from all sources.

Any citizen of Kansas who may have a problem in mind concerning commission government, public utilities, education, banking, insurance, taxation, or any topic of current interest, is privileged to write to the State Librarian for such information and assistance as the library affords. All such questions will be carefully considered and impartially answered. There is no charge for such service, and the public is requested to make full use of the resources of the library, either by correspondence or through personal visits.

A great deal of work of this character has been performed since the Legislative Reference Bureau was established. College and school debaters have visited the library to equip themselves for their tasks. Political organizations have had access to the files of the library for statistics and other material relating to congressional and legislative affairs, economical questions and party policies. Societies and clubs have made similar use of the library, and hundreds of personal inquiries

have been answered. In this way the library has been brought into helpful contact with the public to a greater extent within the past two years than ever before, and it is desired that this relation shall be continued and broadened.

### TRAVELING LIBRARIES.

Another adjunct of the State Library is the system of traveling libraries established in 1899, and which has had a steady growth each year. Beginning with 3000 volumes in 1899, the Traveling Libraries Department now possesses 41,000 volumes. The traveling libraries are sent out in trunks containing fifty books each. In 1910-'12 libraries to the number of 1106 were sent out—an increase of 106 over the previous two years. They go to small towns, school districts, literary societies, granges, clubs and localities that have no local facilities for supplying desirable reading matter.

During the 1910-'12 biennium 55,300 books were circulated by the Traveling Libraries Commission. Reports from the various localities served show that each case of 50 books has had an average of 61 readers, and an average circulation of 332. This gives a total circulation of 367,192 for the 1106 libraries in use during the past two years.

Small collections of books have recently been sent out to students who are taking an extension course in the University of Kansas. This is the result of an arrangement entered upon by the library and the University for coöperative work. Without this coöperation and mutual assistance the students in most instances would not have been able to complete the prescribed course. These fractional libraries contain from four to sixteen books each, and comprise works on English history, education, philosophy, psychology, sociology, American history and American literature.

Five libraries of German books are also in circulation over the state, in response to a demand made upon the Traveling Libraries Commission. It is the constant aim of the officers of the Commission to make the traveling libraries of real value and interest to the people of the state, and especially to supply the smaller towns with reading matter suited to their needs. Books have been sent to every county in the state except one, and to 638 towns and cities.

**APLINGTON ART GALLERY.**

By act of the legislature of 1907 the state accepted from Mrs. Kate A. Aplington, of Council Grove, Kan., four collections of mounted pictures for circulation in the state under the regulations prescribed by the Kansas Traveling Libraries Commission. In the use of these art galleries the applicants are required to defray the cost of transportation on the basis of \$5 for each collection used. Nine of the galleries were in circulation during the last two years. The donor, Mrs. Aplington, is at work upon a plan for enlarging the collection of pictures and making their use by schools and art clubs more general.

FOURTH BIENNIAL REPORT  
OF THE  
KANSAS  
LIVE STOCK SANITARY  
COMMISSIONER,  
1911-'12.

---

J. H. MERCER, COMMISSIONER.

STATE PRINTING OFFICE,  
TOPEKA, 1913.

4 3980

## *Report of the Commissioner.*

TOPEKA, August 1, 1912.

*To His Excellency, W. R. Stubbs, Governor:*

SIR—In compliance with the provisions of the live-stock sanitary law of this state, I herewith submit a report of this department, ending July 31, 1912. This report covers in a general way the transactions of the department from December 1, 1910.

On account of the limited space allotted by the Printing Commission, it is essential that this report be condensed as much as possible. Therefore, no detailed statement of the work of the department is made at this time.

Since our last report the quarantine existing on account of scabies among cattle against the counties of Hamilton, Stanton, Morton, Stevens, Grant, Kearny, Finney, Haskell, Seward, Meade and Clark has been raised. The quarantine was temporarily raised last January on the part of the state, on account of the movement of cattle from the western division of the state to the middle and eastern divisions for feeding purposes during the severe winter weather; and on close inspection of the various herds of cattle in these counties last spring it became apparent that it was practicable to permanently raise the quarantine, which was done, becoming effective April 1, 1912. I might add that releasing from quarantine the counties above mentioned places the entire state in what is known as clean or free territory.

This department, in coöperation with the Bureau of Animal Industry, has assisted the stockmen in the eradication of this disease in the quarantine counties, until at the present time but a few infected herds remain in the entire territory. From the fact that the disease is so thoroughly eradicated and stockmen have become so familiar with the manner of treatment, there is but little likelihood of this disease affecting the cattle interests of the state hereafter to any extent.

### TEXAS FEVER.

There has been but one outbreak of Texas fever in the state since our last report, this occurring in Wyandotte county in August of 1911, where four head of Texas steers broke away from the quarantined stock yards at Kansas City and roved over the pastures in close proximity to the yards where a number of dairy herds were grazing. The Kansas City Stock

Yards Company were responsible for this outbreak. As soon as an investigation developed the nature of the disease, permission was granted the owners of these dairy herds, John W. Herne and others, to drive the infected cattle to the quarantine yards at Kansas City and dispose of them for slaughter, subject to post-mortem results, there being about 250 head of cattle in all. The loss accruing on account of this outbreak of Texas fever was adjusted by the Kansas City Stock Yards Company with the owners of said herds satisfactorily.

No other outbreaks among cattle in the state, causing any loss of any consequence from contagious or infectious diseases, have occurred since our last report.

#### TUBERCULOSIS.

During the year 1911 and up to July 1 of this year 9252 head of cattle have been tested for tuberculosis under the direction of this department. This work has been carried on in a large number of the counties, but the largest number were tested in the counties of Wyandotte, Johnson, Leavenworth and Shawnee. This was on account of the requirements of city ordinances passed by the cities of Topeka, Kansas City, Kan., and Kansas City, Mo., calling for tuberculin-tested dairy products. Out of the number tested 460 were condemned as being infected with the disease, and disposed of at market centers in accordance with the provisions of the tuberculosis law. About 5 per cent of the number tested are shown to be diseased. The post-mortem results of these infected animals show that about 95 per cent are passed under government inspection for food.

A large number of the cities and towns in the state are passing ordinances in compliance with the provisions of section 24 of chapter 312, Session Laws of 1911, requiring all owners of dairy cattle to subject their herds to the tuberculin test before permitting them to sell their products on their city markets.

There are different opinions among scientific men concerning the transmission of tuberculosis from the bovine animal to human beings, which no doubt in a short time will be settled definitely. Regardless of this issue, there is no question of the beneficial results that are being brought about by the movement requiring the testing of dairy cattle for tuberculosis, for the reason it is the means of taking from these various herds old and diseased dairy cattle that should not be used for dairy purposes, and is instilling an interest in dairy owners to build up and keep more healthy herds for dairy purposes. A larger appropriation on the part of the next legislature for this purpose would be of great benefit to the state.

## HORSES AND MULES.

There have been no outbreaks of contagious or infectious diseases of a serious nature among the horses and mules of the state during the past year, with the exception of a few cases of glanders. There were destroyed for glanders 82 horses in 1911, and 56 horses this year up to June 30. These outbreaks have not been confined to any one locality of any consequence, with the exception of Sedgwick county, where several head have been destroyed in the past few months, but at this writing is under food control. The other cases have been in different sections of the state, largely in the cities and towns.

Since the enactment of the law providing for the appraisal and allowance for the destruction of glandered horses went into effect, in June, 1911, we have had but little trouble in having horses infected with glanders disposed of.

---

HOG CHOLERA AND ITS CONTROL.

By DR. K. W. STOUDEL, veterinarian of this department.

No victory of science over disease has been of such vast interest to the live-stock industry of the Middle West in recent years as has been the perfection of the Dorset-Niles anti-hog-cholera serum, and it is safe to say that probably no meritorious article has in so short a time been so highly complimented as to experience such a large number of imitators.

The true Dorset-Niles process is based upon the theory that all animals which are immune to a given disease, especially if that immunity is due to having successfully passed through an attack of the disease, have in their blood certain anti-bodies which are harmful to the successful growth and progress of the germ causing the disease. If these anti-bodies can be successfully transformed from an immune animal to one of his own species which is not immune, it usually is of assistance to the non-immune in combating an exposure to the disease. This is the basic theory.

The following is the practical method followed to immunize hogs:

A hog immune to ordinary exposure to the cholera is fastened to a table and about five cubic centimeters for every pound of weight of the blood fluid of a pig very sick with an acute form of the cholera is passed directly into the veins of the immune hog; thus a 200-pound hog receives 1000 cc., or about a quart.

Within ten days, by cutting off a small piece of the tail, the blood of the now hyperimmune is drawn, and at intervals of about seven days several blood drawings are made. This blood with the clot or fibrin removed stays fluid, and is now tested for potency, that is, its efficiency to protect a susceptible pig against the cholera. This is performed in several ways. The best is to give one pig some virulent blood from a known case of cholera; give a second some virulent blood and a dose of serum. If the one receiving the virulent blood dies in four to eight days the blood is surely virulent, and if the one receiving the virulent blood and serum lives thirty days and more, the serum is surely potent. This is the most severe test, though there are others which will readily occur on a little thought. This potent serum is now ready for field use, and with a small amount of preservative and kept at about 50° to 60° F. will remain potent for several months. It is applied in doses of about

20 to 30 cc. per 100 pounds, deep into the muscles, with a clean sterile syringe, after carefully disinfecting the site of injection.

Given alone, serum produces absolutely no ill effects whatever, and can not produce the cholera. It, however, is absorbed and apparently passed out of the system, until the average hog is not immune to the cholera, if he receives same alone, for more than 30 to 60 days. If, however, at the time of injecting the serum, the hog is exposed to the cholera by injecting a small amount of virulent blood into his system, as was performed on the test pig, the hog will without any apparent sickness become immune to the cholera permanently. There may be a loss of as high as two per cent with this process, but if serum alone is used, and five to ten days later serum and virulent blood used, there will be no loss and the immunity will be permanent.

Obviously the latter two processes are the most satisfactory, and are usually called the simultaneous process and the double simultaneous process respectively.

During the summer of 1911 hog cholera was very prevalent over the corn belt, and Kansas experienced many outbreaks. This situation was somewhat foreseen by the present live-stock commissioner, for an appropriation for a serum plant had been obtained from the legislature some time before and a material increase of its maintenance had been provided by the legislature of 1911.

Notwithstanding the fact that this plant, operated at its highest capacity, has supplied as much as 400,000 cc. of serum within a week, many requests for serum could not be filled during the fall of 1911. The result was, many owners, confident of the efficiency of potent serum properly applied to immunize their hogs against cholera, did nothing and lost their hogs. Others obtained serum from commercial firms. Some had good results, and others, due to the use of impotent serum, either improperly made or not carefully handled, experienced very disastrous results. Some owners obtained materials presumed to be serum, but which are not remotely related to anti-hog-cholera serum, and almost universally met with disaster.

From the above review of the situation, it is easily seen that good serum has had its imitators and that the serum immunization of hogs probably has some enemies, but these are practically all owners who have not had experience with potent serum properly applied by an experienced operator.

In a large number of instances where potent serum and an experienced operator has immunized hogs under the direction of this office satisfaction to the owner has been almost universal, especially when he exposed his hogs to the disease and proved them immune.

There has been an attempt made to obtain a record of most of the outbreaks of hog cholera and the steps taken to suppress the disease. The statistics acquired are interesting and educational. They show hog cholera occurring in nearly every county in Kansas, and that practically every known remedial agent has been tried to control the disease. In some cases mediocre results were obtained from the use of serum by inexperienced persons, who, if observing and supplied with good serum, will usually have better results the next time. In other instances, serum of indefinite composition and potency, in the hands of good operators, has given poor results. This teaches the lesson that one can not be too careful in his scrutiny of the ability and care of the manufacturer who supplies him to make a highly potent and uncontaminated product. Finally, it is gratifying to note that in every instance where the serum supplied through this office has been applied by a competent operator to healthy hogs, no losses from cholera occur when the herd is exposed. It is also noticed that practically everyone who tries can immunize hogs by following the simple directions given, and in those few cases of disappointment investigation proves the operator and not the serum at fault.

It has been impossible to obtain absolutely complete data on all hogs

treated by the many deputies of this office over the state, and in some cases owners have failed to report the results, as requested, even after several letters were sent. It is safe to assume, however, that practically all of the cases where hogs were lost were reported, and in a few cases where the disease had become well started there were losses, for serum is not a cure for cholera, only a preventive, and should be used before trouble starts to insure the best results.

In conclusion, it is well to remember that the state manufactures and sells the genuine hog-cholera serum.

The cost of state serum is less than that of most commercial firms.

The serum, if made correctly by people who know how and properly applied, will positively prevent a hog from contracting cholera. Immunity may be very temporary or permanent, according to process used. The process used necessarily depends somewhat upon local circumstances.

In cases of doubt, call on the live-stock sanitary commissioner or his veterinarian and get advice as to what to do, or a demonstration of how to apply the serum process, if you desire it.

### FINANCIAL STATEMENT.

The following itemized statement includes salary of commissioner and his necessary traveling expenses; salary of stenographer; office expenses; salaries and expenses of inspectors in the mange district; salaries and expenses of patrolmen along the Oklahoma and Kansas state line, and salaries and expenses of veterinarians doing service for the department. Veterinarians of the veterinary department of the Agricultural College receive no compensation other than their necessary traveling expenses:

#### *Appropriation for fiscal year 1911-'12.*

Salary of commissioner.....	\$2,500
Salary of stenographer and clerk.....	900
Traveling expenses of veterinarians, live-stock commissioner, inspectors and patrolmen.....	3,000
Office expenses .....	400
Salaries of inspectors and patrolmen.....	5,000
Salaries and expenses of veterinarians in testing cattle for tuberculosis .....	1,500
<b>Total .....</b>	<b>\$13,300</b>

#### *Disbursements, July 1, 1911, to June 30, 1912.*

Commissioner's salary for one year.....	\$2,500.00

Disbursements fiscal year 1911-1912 .....	435.98		
Deficiency .....			\$35.98
<b>Fund No. 5:</b>			
Appropriation fiscal year 1911-1912 .....	\$5,000.00		
Disbursements fiscal year 1911-1912 .....	4,416.25		
Balance .....			\$583.75
<b>Fund No. 6:</b>			
Appropriation fiscal year 1911-1912 .....	\$1,500.00		
Disbursements fiscal year 1911-1912 .....	1,393.97		
Balance .....			\$106.03
Unexpended balance in above funds June 30, 1912.....			\$836.48

## RULES AND REGULATIONS

### CONCERNING THE ADMISSION OF SOUTHERN CATTLE INTO KANSAS, EFFECTIVE APRIL 1, 1912.

#### STATE OF KANSAS.

##### LIVE-STOCK COMMISSIONER'S DEPARTMENT.

**RULE 1.** All cattle which come directly or indirectly from any territory which is now or may hereafter be quarantined by the secretary of agriculture of the United States, as affected with or exposed to Texas or splenic fever, shall be designated as "Southern cattle" and are prohibited from entering the state of Kansas for any purpose other than immediate slaughter during the period of each year from February 1 to October 31. During the months of January, November and December of each year, cattle from the above-named area may be admitted into the state when accompanied by a certificate of health issued by an agent of the Bureau of Animal Industry, showing that the cattle are free from fever ticks (*Margaropus annulatus*). The certificate shall be attached to the way-bill accompanying the shipment and an I. D. Form 48CC giving certificate number shall be mailed to the live-stock sanitary commissioner, at Topeka.

**RULE 2.** All cattle coming from that part of Arkansas, Oklahoma and Texas designated as a special quarantine district by the secretary of agriculture in B. A. I. Order No. 158, dated March 27, 1909, may be admitted into the state of Kansas after being inspected and found clean from Texas fever ticks and dipped under government supervision in an approved crude oil emulsion or arsenical solution; an I. D. Form 24A (dipping report) to be mailed to the live-stock sanitary commissioner, at Topeka. Cattle from the Republic of Mexico, which have been inspected by an inspector of the United States Bureau of Animal Industry, and ac-

accompanied by a certificate Q. D. Form 29B entitling them to admission into the United States as "free cattle," may be permitted entrance into the state of Kansas. A copy of such certificate to be mailed to the live-stock sanitary commissioner, at Topeka.

**RULE 3.** All public stockyards where Southern cattle are received, and all other yards where such cattle are received, for feed, water, rest or any other purpose, shall maintain a division to be known as the "Quarantine Division," which shall be either separate and apart from yards used for other cattle, or shall be separated from the pens used for other cattle by a space of not less than ten feet wide, having on each side a tight board fence of not less than five feet high, and have posted thereon a sign, "These pens for Southern cattle."

**RULE 4.** All cars while carrying Southern cattle in Kansas shall bear on both sides printed manila placards not less than  $5\frac{1}{2}$  by 8 inches in size, the letters of which shall be plain and not less than  $1\frac{1}{2}$  inches in height, to be affixed by the railroad company hauling the same, stating that said cars contain Southern cattle, and each of the waybills, conductors' manifests and bills of lading of such shipments by cars shall have a note plainly written or stamped thereon with a similar statement.

**RULE 5.** Cars used to transport Southern cattle shall, at the point of destination, and before being again used, be thoroughly cleaned and disinfected; all litter and manure shall be removed from the same to a place where no cattle shall come in contact with it, or shall be treated in such manner as is now or may hereafter be approved by the Department of Agriculture of the United States, so as to destroy all means of infection. If, for any cause, Southern cattle are unloaded into native pens within the state of Kansas, the live-stock sanitary commissioner shall be notified immediately of such unloading, the pens locked, and cleaned and disinfected as designated by the secretary of agriculture of the United States Department of Agriculture.

**RULE 6.** Where a pasture lies on both sides of the line dividing Oklahoma and Kansas, from the Arkansas river east to the eastern border of the state, it shall be treated as quarantined territory as per government regulations. In pastures or upon ranges where fever ticks (*Margarepus annulatus*) are known to exist, and where, and in the judgment of the commissioner, said ticks, owing to favorable conditions, are likely to live through the winter season, said pastures shall be placed in quarantine and no cattle allowed to run in said pastures for the first day of April until the first day of October. The pastures may be used, however, for the range of other animals.

**RULE 7.** Any person desiring to avail himself of the passage of cattle for slaughter purposes from points now under quarantine against Texas fever by the Department of Agriculture of the United States may do so by consigning them to the quarantine pens of the market they may be destined to. But under no conditions shall they be unloaded in native chutes or native pens in Kansas unless they are accompanied with a certificate of health as provided in rules 1 and 2. Also, cattle destined to points beyond the limits of Kansas may unload for feed and rest at any shipping yards on the line of road on which they are being shipped, provided each and every shipment is accompanied with a certificate of health as provided in rules 1 and 2.

#### RULES AND REGULATIONS RELATING TO CATTLE INFECTED WITH SCABIES.

**RULE 8.** No cattle shall be admitted into Kansas from any state or territory or portion of any state or territory under quarantine by the secretary of agriculture of the United States, an account of the disease known as scabies or mange, unless accompanied with a certificate of inspection issued by an inspector or agent of the Bureau of Animal Industry

showing that the cattle are clean and free from the disease; and a copy of I. D. Form 24B covering the inspection shall be mailed to the live-stock sanitary commissioner.

**RULE 9.** Whenever scabies or mange is known to exist on cattle in Kansas, the owner or manager of such cattle shall, upon being served with a quarantine notice by the live-stock sanitary commissioner or his duly authorized agent, proceed to dip or treat said cattle under the supervision of the live-stock sanitary commissioner or his duly authorized agent. And in case of his failure to do so the sheriff of the county in which the cattle are located shall take possession of all such cattle and treat them until they are cured, under the supervision of the live-stock sanitary commissioner or his duly authorized agent. All the expense of such treatment will be chargeable to the owner of the cattle or become a lien upon the cattle.

#### **TUBERCULOSIS REGULATIONS.**

**RULE 10.** No cattle to be used for dairy purposes, or pure bred or registered cattle to be used for breeding purposes, shall be admitted into Kansas, unless accompanied by a certificate of satisfactory tuberculin test showing them to be free from tuberculosis, applied within thirty days prior to movement, by a veterinary inspector of the Bureau of Animal Industry or by a veterinarian whose competency and reliability are certified to by authorities charged with the control of diseases of domestic animals in the state where the cattle originate. One copy of such certificate shall be given to the owner or person in charge, one sent to the live-stock sanitary commissioner at Topeka, and one to the common carrier to attach to the waybill.

**RULE 11.** The tuberculin test shall not be applied by any one to any cattle in Kansas, except veterinarians holding a commission from the live-stock sanitary commissioner. No tuberculin shall be used, except that furnished by the Bureau of Animal Industry of Washington, and supplied by the live-stock sanitary commissioner.

**RULE 12.** All animals found to be infected with tuberculosis shall be disposed of in accordance with the provisions of section 23, chapter 312, Session Laws 1911.

#### **REGULATIONS PERTAINING TO THE SHIPMENT OF HOGS.**

**RULE 13.** No hogs shall be admitted into Kansas from any state or territory, except for immediate slaughter, unless accompanied by a certificate issued by a veterinary inspector of the Bureau of Animal Industry, or a veterinarian authorized by the authorities charged with the control of diseases of domestic animals in the state where the hogs originate, showing them to be healthy. The strictest care must be observed preventing exposure to contagious diseases in shipping hogs to be used for any other purpose than immediate slaughter.

**RULE 14.** No hogs shall be shipped or driven out of public stockyards at market centers in Kansas to points in Kansas, except for immediate slaughter, except under permit issued by the live-stock sanitary commissioner or his agent.

**RULE 15.** No hogs shall be shipped from one point to another within the state of Kansas for any other purposes than immediate slaughter, except on permit issued by the live-stock sanitary commissioner or his agent, authorizing such shipment.

**RULE 16.** All veterinarians and inspectors authorized by this department to investigate reported outbreaks of contagious and infectious diseases among the live stock of the state are required to immediately report same to the state live-stock commissioner.

**RULE 17.** Veterinarians or inspectors authorized by the state live-stock commissioner to test cattle for tuberculosis, horses for glanders, or inspecting live stock for shipment to other states, shall not charge to exceed \$5.00 per day and their necessary traveling expenses while doing the work.

**RULE 18.** It shall be the duty of the managers or the persons in charge of stockyards in Kansas to keep the said yards in proper sanitary condition for the protection of the health of all live stock entrusted to their care, and to cleanse and disinfect all yards, pens, chutes and alleys at such time and in such manner as may be deemed necessary by the state live-stock commissioner or his authorized agent.

**RULE 19.** All railroads, live-stock transportation and stock-yard companies and their employees are hereby forbidden to transport, drive or in any way handle live stock in Kansas, except in compliance with the foregoing, under the pains and penalties of the following law: "An act for the protection of domestic animals." Extract from chapter 495, Laws of 1905. "SEC. 25. Any person who shall violate, disregard or evade or attempt to violate, disregard or evade any of the rules, regulations, orders or directions of the live-stock sanitary commissioner establishing and governing quarantine shall be deemed guilty of a misdemeanor, and be fined in any sum not less than \$100 nor more than \$5000."

All rules and bulletins issued previous to this date are hereby revoked.

J. H. MERCER, *Live-stock Sanitary Commissioner.*

Done at Topeka, Kan., April 1, 1912.

## THE HORSE PLAGUE.

The most important and serious problem that came before the department during the year was the so-called "horse plague" which broke out in Ness county in July. It was not reported until the closing days of the month, and it instinctively appealed to me as something that needed the most prompt attention and heroic treatment.

The first reports made to me expressed the belief that the disease was caused by fungus poisoning, owing to an excess of moisture falling upon the grass after a period of intense heat. Other and later reports indicated that it was caused by an unknown bacteria, while a third group of people believed it to be due to a troublesome worm of some sort. The necessity for practical and energetic investigation was apparent, and I dispatched Prof. T. J. Haslam, bacteriologist of the veterinary department of the State Agricultural College, to the scene of the trouble.

This was on August 1. With the characteristic energy and intelligence of that branch of the public service, Professor Haslam made a report by wire, telling me that he considered the disease serious, not only in Ness county, but a menace to the horses of the surrounding counties, as it was spreading rapidly. He believed that a corps of veterinary experts should be placed in the field at once to combat the disease. Accordingly, I wired Dr. A. T. Kinsley, of the Kansas City Veterinary College, and Drs. J. H. Burt and R. R. Dykstra, of the State

Agricultural College, to proceed at once to the west and make a thorough investigation of the situation.

These gentlemen responded in a manner that was highly creditable to their profession. This investigation covered a period of fifteen days. In the meantime the disease was spreading so rapidly that thirty counties were affected by August 15. Telegrams poured into my office, as well as to the office of the governor, from every quarter, requesting relief. A panic prevailed, and night and day my department worked to employ and assemble veterinary surgeons wherever we could get them to take the field. The prompt action of the governor in tendering my department the sum of \$2000 from his contingent fund, and as much more as necessary, gave great stimulus to our campaign against the disease. This encouragement enabled not only myself but the veterinary surgeons to make the fight with better courage and a greater assurance of success.

The subsequent action of the governor in offering a reward of \$1000 for a cure for the disease aroused widespread interest, and veterinary and live-stock departments in other western states came into the fight with the liveliest official and professional enthusiasm.

By the last of August sixty counties in the state were affected, and there was a hopelessness as to cure that would have caused the utmost discouragement were it not for the loyalty and determination of the men who were making the fight.

For some reason the general government showed an inactivity in giving us assistance in the face of this menace. In addition to the governor sending many telegrams to President Taft in regard to the matter, I made an official and personal appeal to the chief of the National Bureau of Animal Industry to give us some help in the way of veterinary experts. More than two weeks passed before they abandoned their attitude of seeming indifference. Then they sent some help, and the harmonious coöperation between the state and national departments which followed caused fresh encouragement to possess us. But with our best efforts and most intelligent direction, we were unable definitely to find either the cause or a cure for the disease, notwithstanding the most earnest pursuit through the modern channels of scientific investigation and experimentation.

The following bulletin shows recommendations and conclusions of the experts in charge:

In response to a request of Governor W. R. Stubbs, a meeting was held in his office on September 30, 1912, attended by the following persons who have been investigating the disease affecting horses in Kansas: Gov. W. R. Stubbs; Pres. H. J. Waters, of the Agricultural College; Dr. C. E. Griffin, veterinary, Third field artillery, Fort Leavenworth; Prof. Chas. Thom, mycologist, Bureau of Animal Industry; H. Busman, veter-

inary inspector, Bureau of Animal Industry; Prof. S. J. Hunter, state entomologist; W. H. Trimble, pathologist, University of Kansas; L. W. Goss, pathologist, Agricultural College; F. S. Schoenleber, Prof. T. P. Haslam, E. H. Webster, of the Agricultural College, and J. H. Mercer, live-stock commissioner.

It was the prevailing opinion of those attending the conference that this epidemic was primarily brought on by climatic conditions and that it was not considered to be contagious.

The recommendations, which do not differ much from the previous official recommendations for the prevention of this disease, are as follows:

1. That all horses and mules be taken off pasture until the disease disappears from the state.
2. Feed these animals a limited quantity of clean, dry hay or straw, and clean, sound grain. Where straw is given, use a liberal supply of bran.
3. Avoid use of hay cut from low or overflowed land or land receiving drainage from pasture or barnyard.
4. See that the horses have a pure, wholesome water supply, free from surface drainage, and that they are excluded from all stagnant or surface water.
5. Empty, clean and thoroughly disinfect all water troughs and tanks by scrubbing out with a solution of four ounces of carbolic acid in one gallon of water, once a week.
6. This disease is one that can be controlled by strictly observing the above sanitary measures. Some horses will die after being fed on dry feed, but horse owners should not become discouraged, but should continue to keep them off pasture and provide proper feed and water as recommended.
7. In our opinion no vaccine against this disease has been fully tried out. Good results appear to have followed the use of the vaccine developed by the Agricultural College and the state live-stock sanitary commissioner, but it is yet in its experimental stage. It is strictly urged that the farmers do not use any of the commercial vaccine offered. Many of them are known to be worthless and some are positively harmful. In case of an outbreak, coöperation with the Agricultural College in further testing this vaccine is greatly to be desired.
8. In any event whether using vaccine or not, it is important to follow the above directions with respect to feed and water.
9. Thus far no curative measures by use of drugs or medicines have proven successful.

#### WARNING.

OFFICE OF LIVE-STOCK SANITARY COMMISSIONER,  
TOPEKA, KAN., Sept. 30, 1912.

In many sections of the state unscrupulous persons have been and are taking advantage of the unfortunate conditions and grafting off the farmers by representing they have remedies that will cure the disease among their horses. This is nothing more or less than a steal, and such grafters and venders ought to be prosecuted, and this department will assist county authorities in any way possible to do so, if notified.

I would suggest to owners of horses that they pay no money to any persons who are selling these fake remedies, for it has been thoroughly demonstrated that there is no cure for this disease by the application of medicines of any kind.

J. H. MERCER.

One significant development of the inquiry was this: that very few horses kept on dry feed and watered from wells took the disease. It was confined almost exclusively to horses in

pastures and watered from ponds or streams. This naturally inclined people's minds to the first two theories—fungus and bacterial poisoning.

It is to be hoped that the veterinary department of the State Agricultural College will write and publish a bulletin treating the subject in detail from a professional aspect.

The disease cost Kansas dearly, not only in the individual losses to horse owners, but on account of the depletion of the horsepower required in the preparation of the fields for the sowing of wheat and other crops.

The best estimate secured by the department from the clerks in the various counties of the infected district shows a loss of 25,000 head of horses and mules—a property loss to the state of two million dollars or more.

The expense to the state in combating the disease was as follows:

*Paid out of governor's contingent fund:*

Dr. W. E. Simonsen, Dighton .....	\$281.77
Dr. L. G. Van Voorhees, Eureka .....	83.66
Dr. L. Fredenburg, Council Grove .....	107.07
Dr. A. C. Sterling, Humboldt .....	153.37
Dr. C. B. McClelland, Lawrence .....	117.08
Dr. G. C. Furnish, Hiawatha .....	105.96
Dr. C. C. Kinsley, Oakley .....	183.95
Dr. W. C. Bowden, Ness City .....	248.50
Dr. C. C. Wildes, Wichita .....	224.50
Dr. C. W. Hobbs, Smith Center .....	322.35
Dr. E. M. Beckley, Scott City .....	240.00
Geo. E. Gillespie, Dodge City .....	215.00

The sum paid to Geo. E. Gillespie was for three head of immune horses, purchased in Ford county, by direction of the Governor, and shipped to the Sophian Serum Institute, Kansas City, Mo., for the purpose of making a blood serum to be used as a vaccine in preventing the spread of this disease, the A. T. & S. F. Railway Company delivering these horses free of charge. I might add that this company gave every possible assistance to this department in the handling and controlling of this horse epidemic.

*Paid out of the funds of this department:*

Dr. B. A. Robinson, Independence .....	\$122.43
Dr. John W. Smith, Lebo .....	69.03
Dr. S. R. Janes, Turon .....	50.25
Dr. E. M. Bates, Coffeyville .....	79.78
Dr. O. G. Moline, Junction City .....	174.08
Dr. L. M. Akers, Stafford .....	30.25
Dr. J. H. Burt, Manhattan .....	77.62
Dr. A. T. Kinsley, Kansas City, Mo. ....	47.09
Dr. E. R. Dykstra, Manhattan .....	111.37
Dr. H. J. Cairns, Kansas City, Kan. ....	137.09
Dr. E. A. Rippetoe, Marion .....	96.74
Dr. J. M. Bowman, Council Grove .....	282.75
Dr. D. O. Knisely, Topeka .....	30.06
Dr. D. M. Dill, Winchester .....	97.71
Dr. Geo. F. Babb, Topeka .....	223.17

Dr. H. A. Freeland, Abilene .....	64.96
Dr. C. A. Shultz, Ellsworth .....	181.40
Dr. D. B. Pellette, Nickerson .....	15.00
Dr. W. N. Hobbs, St. Joseph .....	62.40
Dr. Geo. F. Jungerman, Morrill .....	84.36
Dr. E. F. Kinsley, Marysville .....	161.70
Dr. F. N. Winchester, Sterling .....	68.55
Dr. F. E. Romeigh, Cottonwood Falls .....	135.13
Dr. H. S. Sowers, Brownell .....	336.00
J. W. Schlicher, Hoxie .....	17.72
Dr. E. G. L. Harbour, Baldwin .....	102.94
Dr. T. F. Garner, Dodge City .....	50.00
Dr. O. O. Wolf, Ottawa .....	97.52
Dr. F. S. Schoenleber, Manhattan .....	109.48
Dr. E. W. Pierce, Bazine .....	383.25
Dr. Edward Ryan, Kansas City .....	201.67
Dr. Walter A. Korb, Hoxie .....	56.00
Dr. C. W. Grizzell, Lyons .....	72.50
Dr. O. W. Burton, Council Grove .....	90.32
Dr. J. H. Coffman, Manhattan .....	144.05
Dr. L. Repstine, Oskaloosa .....	100.00
Dr. E. M. Beckley, Scott City .....	120.00
Dr. W. E. Simonsen, Dighton .....	115.00
Dr. P. C. Black, Lebanon .....	110.00

The above expense includes per diem and necessary traveling and living expenses of veterinarians while in the service of the state during the horse epidemic.

Very respectfully,

J. H. MERCER,  
*Commissioner.*

# KANSAS STATE NORMAL SCHOOLS.

## REPORT OF THE BOARD OF REGENTS.

*Hon. W. R. Stubbs, Governor of Kansas:*

DEAR SIR—In the remarkable forward movement that has characterized Kansas education in the past few years, the Normal Schools have had no small share. In the reports to this Board of the President and Principals of the schools, which are herewith transmitted to accompany this report, it will be seen that in the adjustment and expansion of the Normal School work the schools have been recognizing the changing and increasing demands incident to this growth of our entire educational system, and have been setting for themselves continually higher standards of efficiency to keep pace with the educational growth of the state. The marked increase of attendance upon the Normal Schools, particularly in the light of the fact that the old demands for elementary instruction once made upon the Normal Schools are now to a great extent being met by the high schools and the students attending the Normal Schools are coming to be more and more high-school graduates, is very gratifying.

The standard of requirement for the preparation of teachers of every grade is of necessity rapidly rising. This is true not only of the high schools, which have had an astonishing development in number and enrollment during recent years, but also of the elementary school. The number of new subjects to which attention must be directed in the course of study, the underlying preparation required for teaching these subjects, the general demands for a broader scientific and literary training with which teachers of every grade must keep pace, the test of social efficiency, which is increasing the significance and importance of school work everywhere, have all been elements contributing to this result. It never was more important that teachers be trained, and well trained, than to-day; and the importance of the Normal School system and the responsibility placed upon it to meet these conditions has never been greater. We believe that the policies represented in the

development of the Normal Schools of Kansas have been wisely directed toward this end, and that the schools are in a high degree of efficiency in meeting the purpose for which the state created them, as the state's first and most important agent for the training of teachers for all grades of the public schools. The Normal Schools have been diligently concerned with the problems both of the elementary and the secondary field of public education. Neither is overlooked or neglected in the plan of organization; and the work being done in Kansas in the way of professional preparation of teachers through the Normal Schools is attracting nation-wide attention and has given the state a recognized and high-placed leadership in this particular field of public education. In the nature of the case, no educational investment that the state makes yields a more direct and valuable return than that made for the training of teachers in the Normal Schools. Its results, perhaps, can not always be easily exploited in a material or commercial way; but it is none the less true that the return to the state is immediate and fundamental; and more far-reaching and necessary than any other phase of higher education. Through the schools as through no other community agency all society is reached. The adequate training of teachers is a most vital and essential part of the state's function in maintaining a common-school system. This conclusion will be generally accepted without argument, yet it is to be feared that, in the light of the pressure of the enlarging demands made upon teachers and schools in all lines of educational growth, there is by no means a full appreciation of the relative importance of the work of teacher training as represented by the Normal Schools as part of the higher educational system of the state. The higher educational system of Kansas has three coördinate branches. The Normal School system, including a group of schools, are in general purpose and scope one of them. The number of students in attendance, the immediate and direct significance of their work to the state, as already pointed out, and the necessity for setting the highest standards of educational leadership through the Normal Schools for the whole educational system, make the claim of the Normal Schools for material recognition proportionate to their needs and their possibilities a paramount one. In no class of schools of the state should the standards of personality, scholastic attainment, expert train-

ing and teaching power be higher than in the Normal Schools; in no class of schools should the scale of instructors' salaries be higher, the facilities for thorough instruction be better, and the buildings and equipment be more adequate for the accommodation of students. In presenting, therefore, the estimates for maintenance, equipment and additional buildings for the three schools under their charge, the Board, after careful consideration of every item, present the budget based upon the recommendations of the President and Principals, with their approval and the full confidence that it represents expenditures justified by the growth of the schools and for which the state is destined to receive a profitable return.

Following are the estimates of the amounts deemed necessary for maintenance and permanent improvements for each of the three schools. The reasons in detail for the various items in the budget are quite fully discussed in the reports of the President and Principals.

#### THE SCHOOL AT EMPORIA.

##### *For 1913-'14.*

For maintenance, including salaries, equipment, miscellaneous repairs, supplies, advertising and general expenses.....	\$200,000
For the erection of a building for general recitation purposes, for the use of the grammar and secondary grades of the Training School and for the further accommodation of the work in science .....	100,000
For the general reorganization, restoration and modification of the Main Building and the erection of an auditorium as an extension to the same .....	50,000
For additional equipment and furniture .....	10,000
For the care, upkeep and general improvement of buildings and grounds .....	20,000
For the extension of the capacity of the heat and power plant and the construction of tunnels .....	15,000
For the work of Normal School extension .....	20,000
For the erection and equipment of a dormitory .....	75,000
For the President's contingent fund .....	500

##### *For 1914-'15.*

For maintenance, including salaries, equipment, miscellaneous repairs, supplies, advertising and general expenses.....	\$200,000
For the general reorganization, restoration and modification of the Main Building and the erection of an auditorium as an extension to the same .....	150,000
For additional equipment and furniture .....	20,000
For the care, upkeep and general improvement of buildings and grounds .....	20,000
For the work of Normal School extension .....	20,000
For the President's contingent fund .....	500

## STATE NORMAL SCHOOLS

## THE SCHOOL AT HAYS.

*For 1913-'14.*

For maintenance, including salaries, equipment, supplies, repairs, improvement of grounds and general expenses.....	\$60,000
For the purchase of fuel, freight and hauling .....	2,000
For the erection of an auditorium-gymnasium .....	75,000
For the principal's contingent fund .....	500

*For 1914-'15.*

For maintenance, including salaries, equipment, supplies, repairs, improvement of grounds and general expenses.....	\$60,000
For the purchase of fuel, freight and hauling .....	2,500
For remodeling present Gymnasium into a Library Building ..	10,000
For the erection of a girls' dormitory .....	65,000
For the principal's contingent fund .....	500

## THE SCHOOL AT PITTSBURG.

*For 1913-'14.*

For maintenance, including salaries .....	\$95,000
For library .....	2,000
For fuel, freight and hauling .....	4,000
For equipment and grounds .....	5,000
For Gymnasium .....	100,000
For heating and power plant .....	50,000
For equipment, Industrial Arts Building .....	25,000
For additional grounds .....	10,000
For fire protection .....	2,000
For paving .....	2,000
For telephone system .....	1,200
For the principal's contingent fund .....	500

*For 1914-'15.*

For maintenance, including salaries .....	\$105,000
For library .....	2,000
For fuel, freight and hauling .....	4,000
For equipment and grounds .....	5,000
For Library Building .....	60,000
For Women's Building .....	80,000
For the principal's contingent fund .....	500

Following is the financial statement of the biennium, showing the receipts and expenditures for the past two years as shown by the books of the Financial Secretary, whose accounts have all been carefully audited by the Board and found to be correct. The amounts collected from various sources as fees and accounts have all been paid to the state treasurer and the receipts for the same accompanying regular reports have been filed with the Board of Regents. The regular monthly reports to the state auditor correspond in amount with the receipts from the state treasurer.

## FINANCIAL STATEMENT—INCOME AND EXPENDITURES.

### *The School at Emporia.*

The financial statement for the School at Emporia for the biennial period ending June 30, 1912, is as follows:

#### INCOME PROVIDED AND INCOME EXPENDED.

DESCRIPTION.	Collected or appropriated.	Reverting to state.	Expended by school.	Balance on hand July 1, 1912, available for use 1912-'18.
<b>INCOME FROM STUDENTS:</b>				
Fees in hands of state treasurer, July 1, 1910.....	\$1,404.92			
Fees collected July 1, 1910, to June 30, 1911.....	7,147.82			
Fees expended July 1, 1910, to June 30, 1911.....			\$8,490.53	
Fees reverting to state general fund, June 30, 1911.....		\$61.71		
Fees collected July 1, 1911, to June 30, 1912.....	7,501.19			
Fees reverting to state general fund, June 30, 1912.....		2,027.00		
Fees in hands of state treasurer July 1, 1912.....				\$5,474.19
<b>INTEREST ON ENDOWMENT:</b>				
Balance in hands of state treasurer July 1, 1910.....	9,054.49			
Collected July 1, 1910, to June 30, 1911.....	12,173.88			
Expended July 1, 1910, to June 30, 1911.....			12,377.01	
Collected July 1, 1911, to June 30, 1912.....	12,302.25			
Expended July 1, 1911, to June 30, 1912.....			13,884.02	
In the hands of state treasurer, July 1, 1912.....				7,169.04
<b>DIRECT APPROPRIATION BY STATE.</b>				
1910-'11:				
Maintenance, No. 1.....	130,000.00		130,000.00	
Fuel and freight, No. 2.....	3,000.00		3,000.00	
President's contingent fund, No. 3.....	500.00		500.00	
1911-'12:*				
Maintenance, No. 1.....	157,500.00		157,500.00	
Ventilation of buildings, No. 2.....	10,000.00		6,423.40	3,576.60
President's contingent fund, No. 3.....	500.00		496.81	3.19
Repairs and paving, No. 4.....	25,000.00		17,786.65	7,213.35
<b>Totals, biennium ending June 30, 1912.....</b>	<b>\$375,983.50</b>	<b>\$2,088.71</b>	<b>\$350,458.42</b>	<b>\$23,436.37</b>
1912-'13:*				
Maintenance, No. 1.....	\$157,500.00			\$157,500.00
President's contingent fund, No. 3.....	500.00			500.00

\* Appropriations by the last legislature were made available for the biennium instead of specific years. See Laws of 1911, chapter 25.

## STATE NORMAL SCHOOLS.

## DETAILED STATEMENT OF FEES RECEIVED, EMPORIA.

July 1, 1910, to June 30, 1912.

Fees appropriated to the school:	1910-'11.	1911-'12.	Total.
Miscellaneous .....	\$112.34	.....	\$112.34

Model district school....	794.16	.....	794.16
Apparatus .....	3,336.12	904.58	4,240.70
Subtotals .....	\$41,744.74	\$37,919.80	\$79,664.54

## Repairs and Improvements (at Hays):

General repairs .....	\$4,897.73	\$2,132.12	\$7,029.85
Power plant .....	30,000.00	.....	30,000.00
High-school building ...	.....	34,275.02	34,275.02
Tunnel to high-school building .....	.....	2,055.60	2,055.60
Equipment of high-school building .....	.....	1,573.15	1,573.15
Totals .....	\$76,642.47	\$77,955.69	\$154,598.16

It will be noted that during the fiscal year 1911-'12, \$1080.89 was collected for rent of the lands in the Fort Hays Military Reservation, granted by the national government to the state specifically for the use of the Western Branch of the State Normal School, and the Kansas State Agricultural College. The language of the bill making this grant to the state is very explicit. "Whenever the lands shall cease to be used in said state for the purpose herein mentioned the same shall revert to the United States." The rental already collected for the fiscal year 1912-'13 up to October 1 is \$7308.73. According to the provisions of the appropriation bill passed by the last legislature, these amounts were required to be paid into the state treasury, to become a part of the general fund of the state, thus diverting them from the clear intent of the grant, which made the proceeds of the lands a form of endowment for the school. A serious question arose as to the legality of this use of these funds, and on full conference with the state officers concerned, the attorney general, the auditor and treasurer of state and the representatives of this Board, the collections have been paid into the state treasury, but have been there preserved as a separate fund, which has thus far been held intact and remains unexpended. The responsibility for the rental, the collection of rents, the care and improvement of the 4000 acres of land allotted to the Normal School, by act of the legislature and under the provisions of the national grant when the school was established, has been no small item as an administrative duty of this Board, and requires a great degree of time and attention on the part of the Principal and the representatives of this Board. It seems a matter of simple justice to the school that the rent from the lands should for the next two years, as in the past, be appropriated to the use of the school and that the amount now in the treasury should be made immediately available for its needs during the remainder of the current fiscal year.

*The School at Pittsburg.*

## INCOME PROVIDED AND INCOME EXPENDED, PITTSBURG.

There is also appended to this financial statement a tabulation of the enrollment and the amount expended for salaries, for maintenance exclusive of salaries, and for buildings and improvements for the school at Emporia since 1900-'01, and for the schools at Hays and Pittsburg during the entire period of their history. These figures will prove valuable for purposes of comparison, and, when analyzed, show a very interesting and healthful development.

Total enrollment, 1903-'12, 4,770.

In connection with the matter of the development of the three schools as a system of Normal School instruction, and their relation to each other, your attention is specifically directed to that portion of the report of the President of the schools in which the subject is discussed and in which is outlined the general administrative policy under which the schools should be developed. Acting under the direction of this Board, the President and Principals have outlined for each of the three schools a possible four years of work above the high school, but with the limitation that each school is to have its major development along a special line. The Board believe that it is very desirable to preserve the integrity of the Normal School system, so that the schools may develop with as little duplication and competition as possible, and that under present conditions this end can best be accomplished not so much by centralization in administration as by shaping somewhat definitely the scope, through legislation, of the activities of each of the schools. With this idea in view, the Board in June last adopted the following resolutions, in the support of which the Board and the administration of all the schools are united.

1. It is the sense of the Board of Regents of the State Normal Schools of Kansas that the administration of the three Normal Schools of Kansas shall be under separate management so far as the heads of the three institutions are concerned.

2. That the heads of the three institutions shall constitute a committee on the curriculum and Normal School extension, whose duty it shall be to make recommendations to the Board of Regents on matters requiring uniformity of usage in connection with the maintenance of standards of scholarship and school organization and all matters of coöperation with respect to the extension of the work of the schools.

3. It is the sense of the Board of Regents that the scope of these institutions should be definitely determined by legislation, so that each shall have its special line of activity, the School at Emporia being a general school for the training of teachers, the industrial phases of teacher training being specially emphasized at Pittsburg, and the agricultural phases of teacher training at Hays.

The Board have appointed a committee to formulate in detail before the session of the legislature the ideas suggested in

the above resolution. The members of the Board of Regents, in the light of their experience in dealing with the problems of administration of the Normal Schools of Kansas, have an increasing appreciation of the importance of the work that they are doing. It is highly desirable that they should have an untrammelled opportunity to reach their maximum of efficiency. This we believe can be realized under such a broad general policy as is here outlined. It can not be effectively and economically realized except as all local and personal interests are subordinate and the problem is viewed only as a state-wide problem. We believe that there is no present need for additional normal schools, but that the state should provide with wise liberality for those it has established.

Respectfully submitted.

GEORGE E. TUCKER, *President.*

CHARLES LANDER.

## REPORT OF THE PRESIDENT.

*To the Board of Regents of the State Normal Schools:*

GENTLEMEN.—In presenting my third biennial report as President of the Kansas State Normal Schools, it is with a feeling of deep satisfaction that I record the marked and genuine progress that has characterized the development of all the schools constituting the Normal School system during the period covered by the report. Two years ago, during the school year 1909-'10 the three schools enrolled a total of 3396 students; last year, 1911-'12, 4416, an increase of 1020. Some significant facts about the distribution and character of the enrollment will be discussed in a later portion of this report. The enrollment of the current year is already so far in excess of last year in all the schools as to indicate an increase of not less than 500 or 600 in the total for the year. But increase of enrollment, while it has an important bearing upon the provision to be made for the needs of the schools, is not necessarily the most significant, though it may be the most obvious, indication of growth. More effective organization, better facilities for instruction, the rise in the general standards of preparation of students, the expansion and the adaptation of the course of study to continually growing educational needs—in all these particulars the progress of the biennium has been great, and granted adequate provision for these needs and adequate protection of the present general policy for their organization and development, the opportunity before the Normal Schools for serving the state effectively has never been greater.

The most notable fact of the biennium in connection with the School at Emporia is the definite completion of the organization of the various departments, so as to make it in fact, as it should be in name, a teachers' college, complete in its recognition of every phase of work demanded by the public-school system of the state. This has been in process of evolution for the past six years and has been quite fully discussed in preceding reports. The present organization includes:

1. The Elementary Model or Practice School, including the kindergarten and the eighth primary, intermediate and grammar grades, enrolling from 300 to 400 pupils, with a specially selected faculty of expert teachers, exercising the double function of direct instruction of the children and supervision and criticism of the practice work of student teachers in training. This is a phase of our organization that has always been recognized as essential, and has been marked by no special change during the biennium except the increase of facilities for doing well the various new lines of work that are now coming into the course of study of the elementary school and the perfection of plans to link with the model school more closely the work of instruction in the various departments of the college.

2. The Secondary School, also with a distinct organization and a separate faculty of teachers whose special study is the high-school problem. This organization is made with ultimate reference to its exclusive function as a model high school, but it also serves the present purpose of caring for the needs of a large constituency of rural and other teachers needing normal training who have not yet reached the standing of high-school graduates. The organization of this normal-training high school as a distinct department, toward which work has been pointing for several years, was definitely completed last year, with Dr. J. R. Jewell as principal and a strong corps of specially selected teachers representing the several departments of high-school work. Under your authority, rooms formerly used for gymnasium purposes were divided up into recitation rooms for the use of the high school, with a number of classes overflowing into the Science Hall and the Main Building, particularly the basement, as a temporary expedient to meet the needs of this part of the school. Provision was made for graduating exercises, and the first class of seventy members completed the course in June, 1912. The organization of the normal high school has already been unexpectedly far-reaching in its beneficial effects, and has added greatly to the interest, thoroughness and effectiveness of work among the normal students of secondary grade.

3. The Normal College, in which are represented all the departments necessitated by the present conditions of public-school teaching in the state. The organization of departments as constituted last year is as follows: Psychology and philosophy, school administration, history and principles of education, rural-school administration, primary education, secondary education, zoölogy and geology, agriculture (for the present, however, grouped with biology), botany, chemistry, physics, physiology and hygiene, geography, English, mathematics, European history, American history, political science, economics and sociology, Latin, modern languages, library science, music, drawing, manual training, home economics, commerce, speech arts, physical training. The position of Dean of the College was established and Prof. T. M. Iden was elected to the place.

With reference to the scope of the Normal College, it may be said that the scheme of the course of study provides, broadly speaking, that of the 124 semester hours required for graduation in the four-year course, thirty must be in the general courses in education, approximately thirty more in some selected major representing the department of work in which special teaching preparation is being made, the remainder being made up of prescribed and elective work, the prescribed work largely having reference to teaching requirements. In the shorter, or life-diploma course of two years, there is special provision for certificates of proficiency in primary and grammar-grade work, and in music, drawing and other studies for which the common schools are now requiring special teachers; in all the branches taught in the elementary school special courses in methods are arranged to be closely linked with the work in observation and practice. These details are given in order to emphasize the fact that there is a clear and consistent recognition that the dominant purpose of the Normal School—the training of teachers—must be the

determining factor in the organization of all work, and that the demands of elementary as well as high-school teaching are carefully considered and met. With the single exception of the department of music, where, in addition to the work in public-school music, individual instruction is given in voice and instrumental music, there is no organization of work for special students. In such lines as commerce, art, home economics, library science, they are accommodated incidentally, but the organization of all work is an integral part of the general course with particular reference to preparing teachers. The practical effect of this is to limit the attendance of the Normal School (or Teachers' College, to use the proper descriptive term) largely, and graduation entirely, to those students who are willing to consider preparation for teaching as the special purpose of their education. The ideal of the Normal School is adequate scholastic preparation under circumstances that will foster the broadest and most accurate scholarship, but with the professional spirit pervading every department, and with every department linked as intimately as possible with the work of the training school, which is to the Teachers' College what the farm is to the agricultural college, the moot court to the law school, the clinic and the hospital to the medical school. The organization of the work in every department is to a great extent differentiated from that of an ordinary college by reason of this pedagogical problem. This pervasive teaching atmosphere is impossible in the University, unless its school of education become a fully developed organism with its fully equipped training school and all departments represented, as is the case in the Teachers' College of Columbia University and is now the evolution in such institutions as Chicago and Wisconsin. This, under the conditions in Kansas, will be an expensive and undesirable reduplication, when the state has already so fully provided for that work in what should be recognized as the Teachers' College of the university system of Kansas. There is a field of educational research—properly graduate work—into which as yet the Normal Schools have not assumed to go, nor, in fact, has it as yet had any material development in the University. Such graduate work, it is conceded, is a legitimate function of the University, just as is graduate work in all lines of study leading to advanced degrees. The Normal Schools are more concerned in exalting the teaching function and in setting adequate standards of professional preparation for those who are going directly into the field to meet the present demands. It may well be held, however, that the rigid logic of the situation as it exists in Kansas, where there are three coördinate branches of the higher educational system, would centralize all the activities belonging to the school of education with the institution already fully developed and equipped as a Teachers' College.

4. A fourth group of Normal School activities may roughly be classified as a department of Normal School administration and extension, including the library, museum (as yet but little developed on the educational side), and the various agencies for the extension of Normal School work in the field, through correspondence instruction, extension lectures, school visitation, the appointment bureau for teachers, addresses to educational meetings, the conducting of local teachers' institutes, modeled after the plan of our present successful state-wide institute and the dissemina-

tion of practical educational information through bulletins, correspondence and library extension. Something is being done in all these lines, but the work should be unified and greatly enlarged. We are just on the threshold of its organized possibilities, and this work, with teachers in the field, school officers and other educational agencies, is the legitimate sphere of social service in which the leadership of the Normal Schools should be exerted, and represents their share in the now rapidly developing work in extension into various phases of which the University and the Agricultural College have gone.

Specific reference should be made to certain definite advances that have marked the progress of the biennium in perfecting the organization that has just been described and laying the foundations for future growth. Among these are to be noted:

1. The appointment of a Registrar, as a full-time officer, to direct all matters concerning the registration, credits and classification of students. The conduct of this work has been greatly unified and improved, and with the system of faculty advisers inaugurated this year under the direction of Registrar Bixler, there is likely to be a much greater economy of time and efficiency in the adjustment of work both for teachers and students.

2. The organization of an appointment bureau on a coöperative basis, maintained jointly by the institution and the association of Normal alumni. The institution has for years, through the officers of the training school, readily found places for all of its graduates and many undergraduates, frequently finding urgent demands which could not be supplied. During the past year, under the efficient direction of Mr. Carl W. Salser, as Alumni Secretary, the coöperation of more than five hundred teachers in the field have been enlisted, and the work as organized promises to grow rapidly as a most effective means of serving both school boards and teachers.

3. The better organization of the social life of the school, and provision for effective watch care over the personal and social interests, particularly of the young women of the school. Two years ago, in my report, I said: "I feel more keenly than any phase of administrative responsibility, in the light of the great social freedom enjoyed by our students, distributed as they are throughout the homes of the city, the need of more perfect organization of all our plans with respect to the physical, social and moral welfare of our students. I think it very desirable that with the beginning of the next school year there be added to our faculty, as Dean of Women, a woman of culture, refinement, and the sympathetic qualities that make her a wise counselor of young womanhood, whose duties shall be largely administrative. With reference to the housing of students, I believe the time has arrived when we should make provision for a dormitory for women, which shall be at once a social center for the life of the women of the school and the means of accommodation for a large and growing class for whom the dormitory life seems preferable or necessary." With the beginning of the last school year Miss Harriet L. Barber, who fills ideally the conditions described, entered upon her work as Dean of Women. Her rare insight into the needs of student life and the results of her organizing power are already apparent in many gratify-

ing ways. The arrangement entered upon at the beginning of the current year, whereby the Young Women's Christian Association secretary becomes assistant to the Dean of Women and the Young Men's Christian Association secretary coöperates officially with the Registrar and the Dean of the College, are also steps contributing to the desired end of systematizing the agencies for helpfulness in student life. The moral tone of the student life of the Kansas State Normal School is, and always has been, exceptionally high. It may be doubted whether anywhere a school of its numbers has enjoyed a purer or more healthful life. This is no less true to-day than formerly, though we are undergoing a social transition incident to the general conditions of life in the state, and the fact that while students come to us academically better prepared than formerly, they are appreciably younger and include a much smaller percentage of mature men and women with extended teaching experience. We are seeking to work out the ideal of a free, joyous young life in an environment where purposes will be high and moral conditions safe. Such an ideal, we believe, with the spirit of our present faculty and the organized agencies at work, can be consistently realized. The request for a dormitory, however, made two years ago still represents a definite need and should be renewed in the present budget.

4. Closely related to the social life of the school is the matter of the physical environment of students, and in this matter we have in the Kansas teachers' college possibilities for an ideal organization. One advance step during the biennium has been the establishment of a new department of physiology and hygiene, under a trained physician, whose duties are twofold: first, the working out of courses of instruction in personal and community hygiene and sanitation as part of the equipment of the intending teacher, and second, a general supervision of the conditions of health in the student body in coöperation with the resident nurse and with the physical-training department. Under his direction, as chairman, the committee on student health and sanitation is made responsible for the systematic inspection of rooming houses. The physical-training department during the past two years, with its splendid building and facilities, has enjoyed a remarkable growth in the work offered for both men and women. Much valuable corrective work is being done especially for women. One of the next needs in this particular is the employment of an instructor for women medically trained, who can devote herself exclusively to corrective work and to the presentation of courses of instruction in general and sex hygiene.

5. The development of our library as a special pedagogical agency in a teacher's college, both in its relation to all the departments of instruction and to the teaching field as a whole, under the enthusiastic and rarely helpful leadership of Mr. Willis Kerr, now in his second year of service as librarian, has been an especially gratifying feature of our recent growth; and with the carrying out of all the plans that present themselves for library expansion, more books, more room, more library workers are all pressing needs.

6. The one department in which a new field has been developed during the biennium has been in the work in agriculture. The limitations of

policy that have affected the work in Emporia in manual training and home economics have also applied to agriculture in the working out of the general plan for the development of these special features of work in the schools at Hays and Pittsburg, but the action of the last legislature in providing for instruction in agriculture in the normal-training high schools, and in requiring elementary agriculture for a county teachers' certificate, rendered it imperative that classes should be organized in all the schools, and the work has so grown that two instructors are now required at Emporia, and 250 persons are enrolled in classes during the current term. The development of this work, as of other lines of special work in the teaching field, the Normal Schools can not ignore.

7. Notable features of recent development have been the state-wide institute, and in connection with the summer school and state-wide institute, the model rural school. The state-wide institute, established three years ago for ten days during July, particularly with reference to the presentation of the normal-training high-school subjects by expert teachers and lecturers, has proved so popular and seemed to appeal so strongly to the best class of teachers in the state, that last year its scope was greatly extended, and work was offered by seventeen lecturers and instructors—eight from our own faculty, the others eminent specialists in their particular lines from various parts of the country—to several hundred strong teachers, including city and county superintendents, high-school principals, normal-training instructors, city grade teachers, an eager and interested company. The model rural school, conducted for the past three summers under the efficient direction of Mrs. Emily Kittlaus-Hoelcel, should as soon as feasible be made a permanent feature of our work.

One of the noticeable features of our present growth has been the remarkable recent increase of attendance of the summer school. The enrollment for the six years past is as follows: 1907, 830; 1908, 772; 1909, 890; 1910, 1110; 1911, 1176; 1912, 1334—a steady increase with the exception of a single year; but more significant than the increase in totals is the marked change in the character of the enrollment, particularly in the last two years. Up to a comparatively recent period the spring and summer enrollment was largely of county-certificate students, and the congestion of attendance was in the elementary classes. Of the 1334 students of the summer school of 1912, 60 were special music students, 236 were in the training school, 340 were students of secondary grade, and 718 were of collegiate rank, a very large percentage of them graduates of normal-training courses in high schools. This transition, however, and advance in the grade of students is not confined to the summer school. Two years ago, in speaking of one phase of the evolution of the Teachers' College, then contemplated, the definite separation of students of secondary grade and the establishment of a normal-training high school with a principal and a separate faculty, I pointed out the fact that for some years past the number of students in secondary work had been steadily decreasing, with a corresponding increase in the number of normal students of collegiate grade. I added that this transition would be much more rapid in the immediate future than in the past, so that the conditions

which had existed, namely, the overwhelming preponderance of elementary students in the Normal School, with comparatively few students who have come by way of the high school ready for advanced work, would be reversed; that the elementary work of normal training would become subsidiary and incidental, and the larger energies of the institution would be set free to care for the new need, the students who are ready for the two or four years of normal collegiate training, according to the grade of schools in which they are preparing to teach. The rapidity with which this transition is taking place in the growth of the Normal College strikingly verifies the statement of two years ago. The attendance for the school year 1909-'10 was 2254, distributed as follows: Normal College, 585; Secondary, 1220; Training School, 300; Special Music, 149. The enrollment for 1910-'11 was 2635, an increase of 381, distributed as follows: College, 901; Secondary, 1183; Training School, 414; Special Music, 137. It will be noted that of the 381 net increase 316 were college students. The enrollment for 1911-'12 was 2587, of whom 987 were listed as College, 1032 as Secondary, 437 as Training School, 131 Special Music. Comparing 1909-'10 with 1911-'12, the net increase in enrollment was 333, while the increase in the enrollment of college students was 402—214 more than the decrease in students of secondary grade. The enrollment of 2227 at the beginning of the current school year 1912-'13, exclusive of training-school and special-music students, shows 1059 collegiate and 714 secondary students. Assuming the normal increase throughout the year, this will make approximately 1000 secondary and 1300 collegiate students, or in seven years a gain in round numbers of 1000 college students and a decrease of 300 secondary students. I have had prepared an analysis of the enrollment by classes beginning with the school year 1900-'01, the summaries of which are herewith appended:

Year.	Enrollment.	Collegiate.	Secondary.	Training school.	Special music.
1900-'01	2,135	396	1,485	197	57
1901-'02	2,034	380	1,415	187	52
1902-'03	2,013	403	1,354	164	92
1903-'04	2,049	478	1,178	200	193
1904-'05	1,697	266	1,135	244	52
1905-'06	1,987	302	1,311	281	98
1906-'07	2,157	376	1,332	345	104
1907-'08	2,196	450	1,371	320	104
1908-'09	2,183	531	1,243	280	29
1909-'10	2,224	585	1,220	300	149
1910-'11	2,635	901	1,183	414	137
1911-'12	2,587	987	1,032	437	131

In 1912-'13, according to present indications, the percentage of collegiate and secondary students will be approximately 55.5 per cent collegiate and 43.5 per cent secondary. It should be said in explanation of the term collegiate—a point which needs to be kept constantly in mind—that it is used as a term of classification, simply to indicate the degree of advancement of students whose academic preparation has been equivalent to graduation from the high school. *At no time in the working out of the plan of the Normal College and the expansion of its courses has anything been contemplated but the rigid maintenance of strictly professional ideals*

*that will make the Normal College through and through in every department a Teachers' School in the sense that no other type of school in the state is or can be.*

The establishment three years ago of the normal-training courses in high schools, and the provision now made for the gradual increase until 1917 of the standard of requirement for county teachers' certificates, have an important bearing on this transition taking place in the normal college. A large per cent of the high-school graduates enrolled in the normal college in the past two years have come from the normal-training courses in high schools, and this trend toward a close articulation between the normal training in high schools and the work of the normal schools—a natural articulation—has only just begun to manifest its results. The decrease in our secondary attendance is the natural consequence of the growth of high schools and what has been a gradual but now will become a rapid disappearance of the class of teachers coming directly from the grades by way of the teachers' institute without high-school preparation. This is the class to the service of whose needs the Kansas Normal School of fifteen, and even of eight and ten years ago, was almost exclusively devoted; the policy that has been consistently formulated and successfully carried out during the past six years in the development of the schools has been based upon a definite forecast of exactly the conditions that have occurred. The results are vindicating that policy to a degree that even the most sanguine could scarcely have hoped. During the next few years the more mature members of this class—the experienced teachers now in the field without high-school training—will find in the three Normal Schools the best possible place for completing their elementary preparation and will still form a very large part of our secondary constituency. After that, the normal high school will take its place—a vital and necessary place for which adequate provision must be made—as an integral part of the training or model-school system, and though meeting the direct need of a far more limited constituency of pupils enrolled in its classes, will be of inestimable service to the state as a model high school organized along advanced lines and meeting the needs of intending high-school teachers, just as the elementary model school meets the needs of teachers in the grades. The present organization serves the two purposes, so that now the Teachers' College at Emporia properly has the most effective organization, and should continue to have in every particular provided by the state the most complete and effective equipment for meeting the needs of preparation for every grade of teacher in the public-school work. With the present demands, however, as rapidly as conditions will permit, the same type of high school and college organization should be definitely perfected in each of the other two Normal Schools. The evolution now to be recognized as inevitable in the further growth of the Normal School system is the group of three institutions, all of collegiate grade, all organized with direct reference to teacher training, and all provided with the necessary elementary and high-school organization to carry forward that training for every grade of public-school work, but with each institution, as part of the system developing along the line of a special function, covering the field yet logically and

harmoniously dividing it. The clear logic of the situation is this: First, that the state in establishing these three institutions has entailed upon itself a great obligation if it meets their expanding needs as they should be met to maintain the high standards of teaching preparation that the state demands. Second, these institutions as at present organized should be built up together on a basis of coöperation, not competition, and this can best be done by a consistent plan for the development of special lines of work in each of the schools, a general policy in which the present administrations of all the schools are agreed. Third, it is wise for the state to centralize its activities in the training of teachers in providing adequate plants and maintenance for these three institutions. There is no present need for more. The geographical distribution of the students of the State Normal School at Emporia presents an interesting view of its state-wide efficiency. The enrollment for the two years was:

	Male.	Female.	Total.
1910-'11 .....	759	1,876	2,635
1911-'12 .....	730	1,861	2,587

One hundred of the one hundred and five counties of the state were represented, and the distribution by congressional districts was as follows: First, 166; second, 184; third, 236; fourth (exclusive of Lyon county), 321; fifth, 169; sixth, 108; seventh, 167; eighth, 87; outside of Kansas, 79. Of the 1074 students credited to Lyon county 505 were training-school and special music students, leaving 569 regular students, 260 collegiate, and 309 secondary. Of these 170 were in the first year of the normal high school, a constituency which it has been pointed out will gradually become more and more local. Of the 569 Lyon county students a careful investigation shows that a very large proportion are students from other localities whose address is temporarily Emporia.

With reference to the needs of the School at Emporia for the biennium, it is difficult to say whether the more urgent need is a substantial increase in maintenance to meet the demands of its rapid expansion, or more room to house additional instructors and students who are in every portion of the plant overflowing to quarters already outgrown. As to the additional force of instruction and administration, two elements will be noted as entering into the problem: first, the continued and steady increase of attendance, and second, the change in the character of that attendance and the increase of demands occasioned by the more advanced work done. The tables found elsewhere in this report, prepared by the Financial Secretary, showing the average annual cost per student for salaries, maintenance and betterments since 1901, show an astonishingly low average when the comparison is made with other institutions in the state and elsewhere. This is to be accounted for in large part by the elementary character of the work done by the great body of students—a condition, as has been pointed out, now rapidly changing. The teaching force in several important departments is entirely inadequate, and while this change has been taking place we have been obliged to use in many departments student assistance for elementary classes—a plan which has served its purpose well as a temporary expedient, but can not be continued satisfactorily as a permanent policy. During the current

semester over 700 students are studying English, with six regular teachers; in mathematics the congestion is almost as great, with five regular teachers. A forecast of the conditions shows that during next year and the year following there will be need for at least two additional instructors in English, two in mathematics, two in history, probably two in biology, and one each in psychology, physics, drawing, manual training, domestic science, domestic art, Latin, modern languages, and physical training. There is need also of additional assistance in the library and material increase of force in the various departments of administration to carry out the plans for extension correspondence work and other lines of administrative expansion. There should be a material advance in the schedule of salaries, for which provision should be made in the maintenance appropriations. While there has been a grading up in this particular in the last few years, the scale of salaries of professors in the Normal Schools is still decidedly lower than in the other state institutions. There is no legitimate reason why this should be true. The requirements of scholarship, expert training, personality and teaching power under present standards are as great as in any type of educational institution. The best is none too good for us, and if we get the best the price must be paid. A number of recent changes in our faculty roll have been occasioned solely by the fact that we have been unable to hold certain of our efficient teachers, skilled in their special lines, at the salaries paid. They have gone to other institutions at an advance. Others, remaining with us and growing with our growth, are entitled to far greater recognition than they now receive. I should like to see the maximum salary of professors set at a higher figure than any department salary now paid, with a definite classification of positions and a plan for regular increase until a given maximum is reached. The budget should be liberal enough to make this a possibility. Recurring to the need, already referred to, for additional room and equipment for many departments, it may be said that there is not a building on the campus, with the possible exception of the Physical Training Building, that is not taxed to the utmost to meet the demands upon it. When Norton Science Hall was completed in 1907 there were four instructors doing all the work then required in the physical and biological sciences. Now there are nine representing the same departments, with work that calls soon for the services of not less than three more. With the increase in the number of classes there is additional need for room, not only for recitation, but also for laboratory purposes. The laboratories just now are tremendously crowded. The Model School Building, erected in 1903 at a cost of \$30,000, is altogether inadequate for the present needs of the elementary model school. The high-school grades are very inconveniently housed in the north annex and the adjacent rooms in the Main Building. To meet these varied needs there should be a commodious building erected for general recitation purposes. In these days, when our leading Kansas towns are putting into their high-school buildings and equipment from one hundred to two hundred thousand dollars, the least sum that should be appropriated for such a building is \$100,000. Two years ago an urgent request was made, with your approval, for an appropriation of \$200,000 for the general reorganization, restoration and modification of the Main Building and the erection

of an auditorium as an extension to the same. Tentative plans were made by the state architect at that time, with the idea of extending the central part of the building to the north for a ground-floor auditorium, with such modification of the present interior as would adapt it to present needs. During the session many members of the legislature visited us, and the expressed opinion was unanimous that such an improvement was not only desirable but necessary at an early date; but as the time was not opportune for any building appropriations, it was left over to be renewed in the budget of the present year. The Main Building, erected in three portions and modified in numberless ways to meet changing conditions of the school, is greatly in need of general overhauling and repair. Its arrangement, so far as our present purposes are concerned, is uneconomical and inconvenient, as not a single portion of the building now remaining, except the assembly hall, is used for the purposes for which it was originally designed. The building is unsafe so far as fire risk is concerned, unsymmetrical, in some particulars unsanitary, and in no particular is it commensurate as a central administration building with the dignity and needs of the school. It could under the plans contemplated be admirably, and I believe economically, rearranged so as to make an attractive and appropriate building worthy of the plant of which it is the central part. No appropriation that will be asked from the coming legislature for the improvement of any state institution has stronger claims for consideration than this. Reference has already been made to the request, also renewed from two years ago, for the erection of a dormitory; and in the light of the preceding discussions, the other items of the budget for improvement of grounds, equipment of buildings and the work of normal extension will be self-explanatory.

In accordance with the usual custom, there is appended herewith a list of persons graduating in the various courses for each of the school years 1910-'11 and 1911-'12:

### 1910-'11.

#### FOUR-YEAR COLLEGE COURSE.

Brown, Frank E.,  
Garnett.

Davis, Winifred,  
Emporia.

Harder, George E.,  
Emporia.

Henry, David,  
Emporia.

Honska, Otto J.,  
Lost Springs.

Hunter, J. T.,  
Holton.

Lewis, Charlotte,  
Emporia.

McCormick, Charles W.,  
Atwood.

Metzler, L. F.,  
Burlington.

Ostlund, Emma,  
Clay Center.

Pomeroy, Wilbur,  
Emporia.

Robertson, Maude May,  
Emporia.

Salser, Carl W.,  
Emporia.

Speer, D. Anna,  
Effingham.

Turner, Clair K.,  
Chanute.

Wooster, L. Dwight,  
Emporia.

## TWO-YEAR COLLEGE COURSE.

Allen, A. W., Kingman.	Frye, Peoria, Lincoln.
Anderson, Lawrence B., Alma.	Fulton, Ina, Towanda.
Armstrong, Eva M., Wathena.	Funk, Peter Cornelius, Hillsboro.
Baker, H. Violet, Topeka.	Gaston, Nina, Erie.
Banker, Beatrice, Russell.	Gilbert, John E., Lincolnvill.
Beck, Anna Marie, St. John.	Goodwin, Grace, Abilene.
Barnes, E. B., Emporia.	Green, Eleanor, Leavenworth.
Bradley, Helen, Norcatur.	Hakes, Stella, Clyde.
Brazelton, Senter, Wathena.	Hally, Thomas, Delphos.
Bridges, Edna, Almena.	Hanna, Ida, Waverly.
Canty, May L., Buffalo.	Hansen, Lucile M., Greenleaf.
Canty, Virginia, Buffalo.	Harrigan, Jo., Marysville.
Carter, Nellie, Minneola.	Heaney, Arthur, Healy.
Chipman, Helen, Stockton.	Hemenway, Addie, Emporia.
Coleman, Cora E., Emporia.	Hermann, Charlotte, Kansas City, Mo.
Coleman, Mary L., Emporia.	Hochstetler, Sopha B., Fairview.
Cornick, Anna L., Anthony.	Hoffman, Mabel E., Reece.
Cornick, Alice, Anthony.	Hornbaker, Clyde O., Castleton.
Croze, Leah, Beloit.	Houston, Eula, Potwin.
Dickinson, Guy E., Le Roy.	Howell, Edith, Emporia.
Dorman, Annie, Centralia.	Hughes, Agnes, Kingman.
English, Lucile, Iola.	Hungerford, Herbert, Lawrence.
Erikson, Etna, Junction City.	Isaacs, June Joyce, Meriden.
Everley, Garnett, Emporia.	Isaacs, Osa Lee, Meriden.
Fanska, Katherine, Americus.	Jones, Catherine P., Emporia.
Ferguson, De Witt T., Oklahoma City, Okla.	Jones, Humphrey, Emporia.
Field, Harry, Yates Center.	Jacobs, V. G., Athol.
Finlayson, Edith E., Summerfield.	Johnston, Belle, Douglass.
Franzen, J. H., Goessel.	Kappelman, Benjamin, Linn.
Frossard, Myrtle, Russell.	Kendall, Elizabeth, Smith Center.

## TWO-YEAR COLLEGE COURSE.

Kennedy, Flosse,  
Coffeyville.  
Kerr, Ethel E.,  
Americus.  
Knowles, Annabel,  
Wellington.  
Lipper, Fred.,  
Leoti.  
Loveless, Opal,  
Emporia.  
Lynch, William R.,  
Admire.  
McCarroll, Anna,  
Emporia.  
McLeland, Claude A.,  
Chanute.  
Marks, Fay,  
Lawrence.  
Marsh, Bessie,  
Kineaid.  
Mealey, Ethel,  
Emporia.  
Messenger, Fred W.,  
Basil.  
Meyer, Fred. W.,  
Linn.  
Miller, Florence G.,  
Thayer.  
Miner, Verne E.,  
Burlingame.  
Montgomery, Alice,  
Wilsey.  
Moody, Sylvia,  
Topeka.  
Moore, Webster Carroll,  
Thayer.  
Morgan, Ivy B.,  
Sylvan Grove.  
Morgan, Sara,  
Emporia.  
Newbrey, Lillie,  
Emporia.  
Oakes, Martha,  
Peru.  
Oliver, C. O.,  
Elk City.  
Parkhurst, Caroline,  
Hollywood, Cal.  
Peek, Mildred,  
Seneca.  
Peters, Roy S.,  
Emporia.  
Peterson, Daniel,  
Atlanta.  
Phenicie, Harriett,  
Reno.  
Porter, Belle,  
Mayetta.  
Powers, Jean H.,  
Emporia.

Pruett, Bertha Lee,  
Larned.  
Rankin, Roy,  
Lawrence.  
Rector, Clara M.,  
Emporia.  
Reser, Antoinette,  
Bigelow.  
Richardson, Ada L.,  
Belle Plaine.  
Rife, Mildred,  
Anthony.  
Roberts, Bessie M.,  
Emporia.  
Robison, A. B.,  
Emporia.  
Ross, Edna W.,  
Burr Oak.  
Rundus, Caroline,  
Munden.  
Scott, Agnes,  
Logan.  
Skaggs, Joseph E.,  
Leavenworth.  
Skinner, Lucile,  
Harper.  
Sloan, James C.,  
Eskridge.  
Snyder, Georgia,  
Abilene.  
Speer, Charles A.,  
Howard.  
Smith, Mary O.,  
Lincoln.  
Shuey, Ada,  
Emporia.  
Staley, Grace,  
Richmond.  
Stickel, Florence O.,  
Toledo, Iowa.  
Stradal, Carrie,  
Wa Keeney.  
Strode, Verna Alma,  
Iola.  
Taylor, Lee J.,  
Emporia.  
Tefft, Margaret,  
Garnett.  
Thomas, Margaret,  
Emporia.  
Thompson, Clare C.,  
Moran.  
Thowe, A. F.,  
Americus.  
Tredway, Florence Theresa,  
Emporia.  
Vermillion, Lillie E.,  
Emporia.  
Vezie, Olive,  
Carlyle.

## TWO-YEAR COLLEGE COURSE.

Voiers, Humphre,  
McCune.  
Wagner, Ella J.,  
Ellsworth.  
Walker, Josie,  
Edmond.  
Ward, Lola Edna,  
Emporia.  
Wegley, Addie,  
Emporia.  
Wegley, Inez,  
Emporia.

Werther, Caroline M.,  
Ashton.  
Wier, E. Mae,  
Blue Mound.  
Williams, John R.,  
Emporia.  
Wright, Charles C.,  
Reading.  
Wright, Florence,  
Le Roy.

## KINDERGARTEN COURSE.

Butin, Leila,  
Fredonia.  
Christenson, Minnie,  
Kansas City.  
Corning, Dorothy,  
Girard.  
Hail, Florence,  
Emporia.  
Johnson, Grace,  
Hartford.

Kjellin, Mrs. Anna,  
Emporia.  
McCandless, Mabel,  
Ottawa.  
Osborne, Mrs. Elizabeth,  
St. John.  
Rosecrants, Ola Grace,  
Emporia.

## MUSIC COURSE.

*Piano.*

Douglass, Flossie,  
Emporia.  
Goodwin, Leola Nell,  
Emporia.  
Myers, Edith M.,  
Hamilton.

Marsh, Mrs. Laura,  
Emporia.  
Norman, Bessie,  
Emporia.  
Stone, Mabel,  
Emporia.

*Voice.*

Banker, Beatrice,  
Russell.  
Guettel, Dora,  
Emporia.

Guettel, Marian,  
Emporia.  
Shearer, Ada L.,  
Emporia.

*Violin.*

Louthan, Beula,  
Sutherland, Iowa.

Weatherly, Marie,  
Emporia.

In addition to the above, 31 persons received the certificate in music for a course one year less in extent than that leading to the diploma; 14 in piano, 6 in voice, 2 in violin, 9 in public-school music.

## 1911-'12.

## FOUR-YEAR COLLEGE COURSE.

Anderson, Lawrence B., Alma.	Kirby, Clara E., Wa Keeney.
Barnes, E. B., Emporia.	Larson, John Albert, Chanute.
Bird, J. S., Hays.	Lunden, Mina, Salina.
Caldwell, W. W., Atchison.	Meyer, Fred. W., Linn.
Cash, Annie M., Emporia.	Miller, Sidney L., Cimarron.
Dwelle, Horatio S., Chanute.	Mitchum, Lillian D., Atchison.
Doty, Katherine, Emporia.	Moss, Mrs. Cornelia, Emporia.
Douglass, Aubrey, Emporia.	Parker, Cora, Emporia.
Gebhardt, Floy May, Alden.	Picken, Chat A., Hays.
Hanna, H. J., Waverly.	Rosendale, Christena, New York city.
Harris, Ethel, Emporia.	Snyder, Anna, Emporia.
Hensley, George, Emporia.	Snyder, Georgia, Abilene.
Hollingsworth, Harry M., Emporia.	Tilford, Claud E., Emporia.
Howell, Grace Elizabeth, Emporia.	Warren, William John, Emporia.
Jent, H. C., Hoxie.	Williams, Muriel Ella, Emporia.
Kent, H. L., Manhattan.	

## TWO-YEAR COLLEGE COURSE.

Albers, Lulu E. C., La Crosse.	Brittain, Effie, White City.
Allen, James Garfield, Hewins.	Brittain, Emma, White City.
Anderson, Helen Margaret, Emporia.	Butcher, Jennie, Cimarron.
Asher, Elsie, Fort Scott.	Blakely, Myrtle, Emporia.
Baker, Julia, Cherryvale.	Bordenkircher, Rose, Burlington.
Baltz, Guy, Attica.	Bostwick, Grace, Iola.
Barnhill, Jessie Pearl, Keighley.	Bradley, Grace, Norcatur.
Parry, Harry W., Meriden.	Briner, Lucile M., Olathe.
Batchelor, Nelle, Salina.	Carroll, Mary Helen, Emporia.
Beecher, Mary M., Americus.	Clay, Altha, Oskaloosa.
Binyon, Christopher Webber, Emporia.	Cleavinger, Roy, Lowemont.
Blakely, Georgianna, Emporia.	Cloud, Calvin C., Admire.

## TWO-YEAR COLLEGE COURSE.

Coleman, Eunice Ella, Emporia.	Gleissner, Helen, Abilene.
Collinsworth, G. C., Potwin.	Glucklich, Sadie, La Cygne.
Cook, Harriet B., Emporia.	Gray, Mabel, Washington.
Cook, Gracia, Emporia.	Gregory, Emory, Emporia.
Crippen, Vera, Parsons.	Greenawalt, Mary F., Princeton.
Culbertson, James H., Hepler.	Griffith, Leah, Pratt.
Culley, Elmer E., Chanute.	Hann, Nellie Gretta, Admire.
Curry, Bessie, Strawn.	Harris, Nellie, Oak Valley.
Dahm, Florence, Great Bend.	Hay, William S., Eskridge.
Darrough, Edith, Emporia.	Heagy, Edna M., Peabody.
Dixon, Alice, Leon.	Hearst, William Francis, Parsons.
Dodge, Alice, Emporia.	Heikes, Mabel, Norton.
Dore, Lucile, Waverly.	Heim, Elizabeth, Dorance.
Doty, Katherine, Emporia.	Hendrickson, Mabel, Chanute.
Dwelle, Alice Louise, Cedar Point.	Hendrix, S. D., Brownell.
Edie, Pearl, Plymouth.	Henkins, Ethel, Burlington.
Emerson, Susan B., Topeka.	Henthorn, Hattie, Santa Fe.
Facklam, Amanda, Enterprise.	Herod, Len B., Erie.
Fagan, Thersa, Reading.	Hill, Charles Willard, Smith Center.
Felker, Preston R., Hoyt.	Hills, Nella, Lebanon.
Finn, John M., Paola.	Hodges, Clara F., Ottawa.
Flear, Thomas H., Greenleaf.	Houston, Mary Ona, Potwin.
Foland, Mabelle, Almena.	Huffman, Hazel Verna, Emporia.
Freeman, Laura L., Simpson.	Hutcherson, Rosa, Arnold.
Fulton, E. Bernice, Winchester.	Jarrott, J. W., Great Bend.
Fyler, Eleanor R., La Crosse.	Jones, Jason, Emporia.
Gallagher, Edith, Sparks.	Johnson, Gladys, Waverly.
Gardner, Fred C., Easton.	Kerns, Ida M., Chanute.
Garrett, Katherine, Neodesha.	Kersey, R. T., Paxico.
George, Martha, Emporia.	Kinsey, Jennie, Kingman.

## TWO-YEAR COLLEGE COURSE.

Kjellin, Mrs. Anna, Emporia.	New, George R., Emporia.
Kinhead, Mabel Amanda, Emporia.	Nystrom, Ellen, Wellington.
Klamm, Rose, Basehor.	Oakes, Nelson, Peru.
Krigbaum, Olive, Topeka.	Officer, Ruth, Emporia.
Larson, Emil Leonard, Chanute.	Ogg, Esther, Emporia.
Lesh, Ruth, Arkansas City.	Owens, Mildred Gertrude, Topeka.
Lockhart, Harriet E., Sabetha.	Peek, Hugh E., Seneca.
Lock, Lucile, Stockton.	Perry, Bird, Caldwell.
Losey, Leslie Earl, Clay Center.	Pfaff, Margaret, Hazelton.
Lovett, Clara Ione, Larned.	Phillips, Frank L., Kansas City, Mo.
McCoy, Mrs. J. P., Wamego.	Pickens, Florence L., Pittsburg.
McCullough, Bobbie, Emporia.	Pyle, Anna, Americus.
McDowell, J. D., Emporia.	Reardon, Mae, Tonganoxie.
Marlowe, Charles C., Hartford.	Rector, Eva Gertrude, Emporia.
Marlowe, Mabel, Hartford.	Reese, W. Paul, Garnett.
Mayes, John Frederick, Emporia.	Rennolds, Closson Elansen, Aliceville.
Miller, Frances, Horton.	Robb, Carrie, Osborne.
Miller, Nora E., Hazelton.	Robb, Edgar M., Osborne.
Miller, Robena, Minneapolis.	Roberts, Lewis Beckford, Emporia.
Milner, Laura, Hartford.	Robertson, Raymond Wilks, Emporia.
Mitchell, Florence M., Vernon.	Rugg, Beatrice, Hazelton.
Moody, Zoe, Topeka.	Schermann, Mary T., Neodesha.
More, Ida O., Leavenworth.	Show, Wayne F., Grenola.
Morgan, Anna May, Hiawatha.	Shearer, Ada L., Emporia.
Morse, Lulu, Lebo.	Shinn, Earl W., Burns.
Myrick, Mrs. J. C., Hill City.	Sinclair, Crawford C., Topeka.
Neece, Lloyd B., Wetmore.	Skinner, Carl, Burden.
Nelson, Gladys, Caney.	Smith, Ellen, Iola.
Nelson, M. V. B., Tulley.	Somers, Mae, Altoona.
Nicolay, Mary Amanda, Scranton.	Strawman, Ethel, Emporia.

## STATE NORMAL SCHOOLS.

## TWO-YEAR COLLEGE COURSE.

Summers, Alpha, Leonardville.	Weishaar, Ella Helena, Nortonville.
Taylor, Frances L., Topeka.	Welton, N. S., Rantoul.
Throckmorton, Alice, Burlington.	White, Catherine, Clay Center.
Waldron, J. Harley, Louisburg.	Whitehouse, Maude, Eskridge.
Walker, E. A., Emporia.	Widner, Guy L., Bradford.
Walker, Mrs. E. A., Emporia.	Wooster, David T., Emporia.
Wedell, Emilie, Hillsboro.	Wren, Iva, Kincaid.
Wedell, Hugo T., Hillsboro.	

## KINDERGARTEN COURSE.

Johnson, Gladys,  
Waverly.

## MUSIC COURSE.

*Piano.*

Beck, Rena, Cedar Point.	Fessenden, Madge, Emporia.
Coleman, Madeline, Emporia.	Guettel, Marion, Emporia.
Dahmer, Bernice, Meade.	Jones, Martha, Emporia.
Dowden, Edith, Emporia.	Lock, Lora, Emporia.
Ervin, Mrs. Estelle, Emporia.	Williams, Maude, White City.

*Voice.*

Ireland, Ernest,  
Emporia.

*Violin.*

Gower, Frances, Russell.	McCrary, Maurice, Emporia.
-----------------------------	-------------------------------

In addition to the above, 38 persons received the certificate in music for a course one year less in extent than that leading to the diploma; 13 in piano, 6 in voice, 2 in violin and 17 in public-school music.

In addition to the foregoing there were from September 1, 1910, to September 1, 1912, 147 three-year and 202 one-year certificates issued to persons completing partial courses and meeting requirements prescribed.

I am pleased to transmit for your consideration, in connection with this report, the reports to me of the Principals of the schools at Hays and Pittsburg, and to take this opportunity to express my deep appreciation of the cordial and harmonious spirit that has been uniformly manifested by Principals Picken and Myers in everything pertaining to the administration of the schools. Principal Picken, commemorating last year at commencement time the close of a decade of service since the

school at Hays was established, must have great satisfaction in realizing the far-reaching results of the wise and effective constructive work that he has done. Principal Myers, now entering upon the second year of his service, has won the loyal support of faculty and students, and has demonstrated in a most gratifying way his clear grasp of the significance of the educational problems presenting themselves in his special field. A full statement of the progress and needs of the schools is presented in the Principals' reports. There should be discussed, however, before concluding this report, certain general matters of administration common to these two schools and having an important bearing upon their future development and growth. In July, 1910, in defining the relations and duties of the President and the Principals of the auxiliary schools, you, as a Board, incorporated in the resolutions then adopted the following: "As the executive head of the Normal School system of the state, the Board of Regents will hold the President responsible for the development along uniform lines of the policy of eventually making the auxiliary schools equal in educational standards and curriculum, *having in mind the particular needs of each institution*, with the State Normal at Emporia; and hereby directs the President to carry out the spirit and intent of this declaration as soon as practicable. The Principals shall be responsible, through him, for carrying out these policies and maintaining essential uniformity of usage in the administration of their respective schools." From the beginning of my administrative work as President of the Normal Schools, I have sought with fidelity to discharge the trust imposed upon me, to foster to the full extent the legitimate development of the auxiliary as well as of the central school along the lines in which they were specially intended to serve the state. In that spirit I have sought from the beginning to shape a consistent policy that would enable each school to work out with freedom its legitimate destiny as a part of the Normal School system of the state, yet with due regard to the proper expansion and unity of the system as a whole. Whatever may be the differences of judgment as to questions of policy, no man can say with truth that I have failed in any particular to be faithful to that trust, and I may be pardoned for saying that I look with great satisfaction upon the present growth and progress of all the schools, however largely it may be due to the interest and activity of those who have had them directly in charge, as in great part made possible through the working out of the broad general policy whose results are now beginning to crystallize in the group of Kansas colleges for teachers, now not merely a possibility but a reality. So far as the younger schools are concerned, some stages in this development are yet to come. This could not have been otherwise in the nature of the case. The setting of standards, in the realization in some sense of a completed ideal at Emporia, has created possibilities for the future of the schools at Hays and Pittsburg that could not otherwise have been realized, at least not for a long time to come. The plan of the recognition of the major work in agriculture and related work contributing to the needs of rural communities, so far as it pertains to the preparation of teachers at Hays, while it has had no special suggestion in law, has been in mind as an administrative policy

in every step of expansion—in the establishment of the model rural school, in the provision made first in this one of the Kansas Normal Schools for a separate department of agriculture, and in the erection and equipment of a building for the use of a model agricultural high school.

Historically and legally the special forms of industrial training which have been emphasized at Pittsburg from the beginning suggest the appropriate direction for the development of the Manual Training Normal School or Industrial College for Teachers. I said two years ago in my report: "In order that the school, with the splendid foundation in equipment already laid and with the ideals of effective training that it is already establishing in these departments, may realize to the full its unique possibilities in the lines of work for which it was primarily organized, and which the state has assumed that it was set to do, I am heartily in accord with the expansion of work on this basis, with industrial pedagogy as the major and with such collateral development of other lines of work as will legitimately contribute to a well-balanced course." In obedience to the declared policy of the Board two years ago, and in accordance with the expressed view just quoted, believing that the proper time had come for taking that step, near the beginning of the last school year I formally directed the Principals to organize for my approval, in conjunction with committees of their faculties, courses of study looking to the completion of four years of collegiate work. This has been done with due recognition of the limitations implied in what has been said of the special function of each of the schools, and these courses have gone into effect with the opening of the current school year. I believe that now the policy that has been thus far maintained of mapping out a special though not exclusive field for each of the schools should be crystallized into legislation, and I am in hearty accord with the recent action of the Board upon the subject. I believe that there is no reason why the three Normal Schools under such a policy may not maintain the most harmonious relations and, strong because united, most effectively serve the state. If they do not maintain such unity and harmony the responsibility will rest upon shoulders other than mine.

Respectfully submitted,

JOSEPH H. HILL.

## REPORTS OF THE PRINCIPALS.

### THE SCHOOL AT HAYS.

I herewith present the following report for the biennium ending June 30, 1912.

Following is a list of the graduates from the school since last report:

#### LIFE-CERTIFICATE COURSE.

##### *Class of 1911.*

Brown, Evalina, Hays.	McCall, Charlotte A., Hargrave.
Brown, Henry J., Alton.	Moore, Grover C., Wayne.
Kent, Mary Magdalena, Belleville.	Pearce, Henry E., Portis.
Knoche, Fredella, Hays.	Ryan, Mary A., Hays.
Leahy, Elizabeth H., Hays.	Sites, Blaine E., Hays.
Lund, Alice H., Hackberry.	Solomon, Ida B., Hays.

##### *Class of 1912.*

Arrasmith, Etta L., Belleville.	Cave, Lo Ree. Hays.
Bice, Vernon L., Hays.	Davis, Edwin, Studley.
Bieker, Aloysius, Schoenchen.	Frankenberger, Chas. D., Hays.
Bullock, Carrie L., Hays.	McCarthy, Mary, Hays.
Haas, Adam D., McCracken.	McGlasson, Ernest F., Hoxie.
Herrman, Henry F., Liebenthal.	Moore, Lily L., Hays.
Ivan, Barbara K., Collyer.	Morgan, Prue M., Winona.
Johansen, James W., Codell.	Robinson, John L., Codell.
Lahman, Orren O., Winona.	Sutton, Arthur T., Hoxie.
Shively, Esther, Nelson, Neb.	Unrein, Anthony, Hays.
Campbell, Eva M., Hays.	

While for the biennium the women graduates outnumber the men, the figures for the four years since the life-certificate course went into effect stand 32 men to 27 women—an unusual state of affairs in a co-educational State Normal School.

The first year of the biennium showed a healthy increase in the enrollment, the figures reaching a total of 464, representing 37 Kansas

counties and 3 outside states. Owing to the unprecedented drouth in western Kansas, the second year, 1911-'12, shows a falling off in the attendance, but the decrease was more than offset by the development of the correspondence department, organized during the year, in which 203 students not enrolled in residence were registered. Including the correspondence students, the entire number to which the school gave work during 1911-'12 was 646. The growth of the correspondence department is phenomenal and shows that therein the school has opened a ministry to a vital need of Kansas teachers. The prospect for an unusually large resident attendance for the coming year is evidenced by the fact of an increase of over 62 per cent in the enrollment for the first month of the summer term of 1912 over the number on hand for the corresponding month in 1911.

The outreach of the school is steadily expanding, there being a representation in 1911-'12 from 40 Kansas counties and from 6 outside states. Of the 907 names recorded in the biennium, aside from correspondence students, but 396, or less than 44 per cent, came from Ellis county, the home county of the school. On this point we outrank every other educational institution maintained by the state, if comparison be made when the other school was no older than this one. The correspondence enrollment drew from 47 different counties.

The biennium has witnessed the completion of a heating, water and electric-lighting plant, with tunnel connection to Main Building for heat transmission. This reduces fire danger in the buildings to a minimum. While the electric plant has not been entirely satisfactory in its working, we have assurances from the manufacturers that all defects will be remedied without cost to the state. Should they fail to make their guarantee good it may be necessary to ask for an emergency appropriation, available ere the end of the coming fiscal year, to replace the installation with one of greater capacity. The city of Hays, having an adequate sewerage system and having permitted our connection therewith, it was not necessary for us to construct a sewerage-disposal plant as had been contemplated.

In the second year of the biennium \$40,000 were placed at the disposal of the school for the erection of a building to be used as a model agricultural high school and for other purposes. The building, which is the finest building upon our campus, is now ready for occupancy. It will greatly help for the betterment of our work.

But while we most gratefully acknowledge all that the state has done for us, the repetition of some words from my report to you two years ago I trust will not be out of place: "This school is the only provision the state has made for higher education in the great agricultural empire constituting the western two-thirds of Kansas. An increasing call comes from the youth of the West that here they be given advantages commensurate with modern needs and worthy the munificence of a great and wealthy commonwealth. Surely the people of Kansas do not mean that the young men and women of the western two-thirds of the state shall forever be compelled to traverse the great reaches which must be passed over in order to enroll as students in schools confined in the eastern third. In behalf of the magnificent young manhood and woman-

hood of western Kansas, I earnestly request for them such appropriations for this school for the coming biennium as shall permit a legitimate and needed expansion of its facilities rather than a continuation of the seemingly experimental basis thus far in its history."

I present elsewhere to the Board, through you, detailed estimates of the school's needs for the coming biennium. I trust that the Board may approve these estimates and that the legislature may grant the appropriations for them. Respectfully submitted.

WILLIAM S. PICKENS, *Principal.*

To JOSEPH H. HILL, *President.*

## THE SCHOOL AT PITTSBURG.

In presenting this biennial report I wish to call attention to the progress made by the State Manual Training Normal School during the biennium closing June 30, 1912, and, second, to point out some of the more important needs of the institution if it is to meet the rapidly increasing demands being made upon it by the educational interests of the state.

### PROGRESS MADE.

The catalogue of 1910-'11 includes the names of 723 students in attendance during the year closing June 1, 1910. The total enrollment for the year ending June 1, 1912, was 1183—an increase of 460, or 63.6 per cent, in two years. In 1910 there were 35 life certificates issued to students graduating from the institution, including those completing the course at the close of the summer term. In 1912, only two years later, this number had increased to 105, 72 finishing the course in June and 33 in August.

The rapid increase in number of students has brought with it of necessity considerable, though not proportionate, enlargement of faculty. Lack of funds has made it impossible to enlarge the faculty rapidly enough to keep pace with the growth of the student body. Since the last report, however, our teaching staff has increased from twenty-eight to thirty-seven.

While fair progress is now being made in the construction of the Industrial Arts Building, provided for by appropriation of the last legislature, this much-needed building will not be ready for occupancy before January 1, 1913, if that soon. One unfamiliar with the rapid growth of the school would suppose that this large, well-arranged building would furnish ample room for the school for many years to come. As a matter of fact it will not fully relieve the badly congested condition which has begun to interfere seriously with the school's efficiency.

Another exceedingly important forward step has been taken in the revision and extension of the course of study. This work was carried on throughout the school year 1911-'12 by the Principal and Faculty, and was given very careful consideration. It was, as you remember, approved by you and the Board of Regents early the past summer, to become effective September 1, 1912. In the high-school department provision is made for

a manual-training course, a household arts course, a course for rural teachers, a course for grade teachers in small towns, a commercial course, a general course, and a language course, with a certain group of subjects comprising about half of the four years' work, and called constants, required in all courses. The college department, comprising all work beyond high-school grade, is divided into the Junior College and Senior College. The Junior College includes the work offered in the first two years in all courses, and meets the requirements for the life state certificate. The courses offered are manual training, domestic science, domestic art, commerce, agricultural, general and language. The Senior College comprises the third- and fourth-year work, leading to the bachelor's degree, and affords the student an opportunity to specialize in any of the principal subjects offered in the Junior College. When it is remembered that a large proportion of our students go out into high-school positions as teachers of manual training, domestic science and domestic art, and further that they are very often required to teach one or more other high-school subjects along with their specialty, it is obvious that the additional two years' work leading to the degree strengthens the institution enormously, and fits it for a much larger service to the state. More than three-fourths of the members of the graduating class of last June who obtained positions prior to the writing of this report (August 15) obtained high-school positions. That the extension of the course is greatly appreciated by our graduates from the life-certificate course is shown by the fact that nearly fifty of them were enrolled during the past summer term for work leading towards the degree.

A statement of progress made would not be complete without mention of extension work. We have not sought to develop extension courses; in fact, as far as correspondence courses are concerned, we have persistently refused to conduct them except in a very limited number of subjects and have not encouraged work in these, because no member of the Faculty could give time to much work of this character without interfering with his regular work. Notwithstanding this attitude, the demand for such courses as we were willing to give has increased rapidly, the number taking correspondence work now being two or three times as large as a year ago. Other important extension work has been done by members of the Faculty, in the way of lectures before educational associations, teachers institutes and similar gatherings. Another very important work begun along extension lines and developing into night-school work in the institution has been conducted by Professor Yates of the chemistry department. During the winter and spring of 1909'10 Professor Yates met a class of twelve miners from Weir and Scammon one evening each week, giving them practical lectures and demonstrations on the chemistry of mine gases, explosives, etc. The following year this class numbered eighteen and met one evening each week in the Normal Building for lecture work, laboratory work and study of bulletins furnished by the U. S. Bureau of Mines. The same work was continued last year, with a class often numbering 25 and with 12 regular attendants. Each student received and studied about a dozen bulletins from the Bureau of Mines, in addition to attending the lectures. This is an illus-

tration of the willingness of the institution to make itself directly useful to the industrial interests of the community and the state as far as possible without serious interference with the regular work of teaching resident students. More ample provision for extension work of all kinds must be made during the coming biennium.

#### NEEDS OF THE INSTITUTION.

The needs of the institution may very properly be divided into two classes—material and instructional.

It is obvious that the equipment of our Industrial Arts Building, just nearing completion, is one of the most important material needs at this time. Mr. Bumann has made, at my request, careful estimates of the equipment needed, and I find that it will cost, including freight, drayage, installation, etc., approximately \$25,000.

Another very pressing need is a gymnasium building, with suitable equipment. The room in our present building used for gymnasium purposes served fairly well while the school was small, but is wholly inadequate for an institution enrolling 1200 students and increasing its enrollment at the rate of 64 per cent in two years. A large, well-arranged, well-appointed building, similar to the one at Emporia, should be provided at the earliest possible moment. About \$100,000 would be needed to construct and equip this building.

A central heating and power plant is also practically a necessity. As you know, a temporary heating plant was built to heat the present building, and because of limited funds a similar arrangement is necessary for the building now in course of construction. The electricity used in driving our machinery and ventilating fans and in lighting our building is purchased from the Home Light, Heat & Power Company. While I have not definite figures at hand, it seems probable that the maintenance of a central plant, generating electricity at about half what it is costing us now, as has been proved possible, and using the exhaust steam from the generation of electricity for heating purposes, would be little if any more expensive than the present arrangement, far more satisfactory, and increasingly more economical and satisfactory as we add to the number of our buildings. Moreover, such a plant would be of great value for instructional purposes in connection with industrial physics. In fact, I would recommend that a laboratory with a moderate amount of electrical and mechanical equipment be made a part of the heating and power plant for the use of classes in industrial physics. I have had estimates made of the cost of such a plant, including building, smokestack, tunnels and steam pipe to other buildings, boilers, engines, generators, switchboard, testing machines, and minor items of equipment, and find that an appropriation of \$50,000 would be needed for this purpose.

Another building very much needed is a library. Every hour of the day the rooms used for library purposes are so congested that it is difficult to work and almost impossible to get around. The library, an extremely important part of any educational institution, ought in this institution to have at once three times as much room as it has to-day, to say nothing of proper provision for the growth that is sure to come in the next few years. I would advise the construction of a building

about the size of the Library Building of the State Normal at Emporia, which would require an appropriation of \$60,000.

Still another building for which there is a rapidly growing need is a woman's building, arranged and equipped especially for the work in home making, including household science, arts, management, etc. Our domestic science and arts departments are much crowded now, and with the extension of the course of study and the rapid growth of the school are sure to suffer seriously before the close of the coming biennium unless more ample provision is made for their work. The only proper way to make such provision is to construct a large, commodious building especially designed for this work, as has been done by our State Agricultural College and by numerous other institutions emphasizing the home-making subjects. The possible service of this department of the Manual Training Normal to the state of Kansas is enormous. No legitimate expense should be spared in its development. I would like to see an appropriation of at least \$60,000 made for the construction of a woman's building.

The efficiency of this institution would be greatly increased if we had a model high-school building, a model grade-school building, and a model rural-school building. I have not made estimates on the probable cost of these buildings, and am not asking that appropriations be made for them at this session of the legislature. I merely wish to call attention to them as needs which must have consideration at no distant date. As the school grows its administration will be much easier with separate buildings for these departments of its work, and, besides, it is a part of our obligation to the state to develop a high school, a graded school, and a rural school which shall serve as models in building and material appointments as well as in management and teaching.

Our science departments are working under a serious and growing handicap because of lack of room. This condition will be remedied in part by the removal of the shops from the Main Building when the Industrial Arts Buildings is completed, but relief from this source can be only partial and only temporary. The physical science department is clamoring for two or three times the room it now has. In chemistry especially the number of laboratory tables and hoods is entirely inadequate for the number of students, and no more can be installed, because there is no place to install them. The department of biological sciences is equally insistent in its demands for more room. As stated above, some relief will be afforded when our shops are moved. If it were not for this and for the still more pressing needs in other departments of our work, I would urge an appropriation for a science building at this time.

From what has been said concerning the need of new buildings, it is obvious that the purchase of additional ground is necessary. This is necessary also for the development of our nature-study, school-garden, and agriculture work, all of which must be developed greatly in the next few years. It will be a matter of economy to purchase additional grounds as soon as possible, since the value of adjacent land is increasing with the growth of the institution. The purchase should include not

less than forty acres. There should be an appropriation of \$10,000 for this purpose.

There are also a number of very important material needs that do not call for large expenditures.

Our appropriation of \$2000 for the past year for fuel, freight and hauling was \$365.48 below actual expenditures chargeable to this account. With the addition of another building this appropriation should be raised to at least \$4000.

An appropriation of \$2000 should be asked, to become immediately available for additional fire protection. This would provide for the laying of necessary water pipes and the installation of four fire hydrants easily accessible to either building in case of fire, and also in position to protect the proposed gymnasium and library when completed.

The appropriation of \$1000 per year for the purchase of library books and periodicals should be doubled at least for the next biennium. Our library is small even for an institution as young as this is. The various departments are all the while calling for books not found on our shelves. An appropriation of \$2000 per year would make the library of much greater service to the school.

It would seem wise to continue the appropriation of \$5000 per year for grounds and equipment made by the last legislature. This will provide for the laying of additional walks made necessary by the erection of the Industrial Arts Building, the completion of the walk around the campus, for the construction of a concrete fence on the street sides of our athletic grounds, and the purchase of some items of equipment for the present building, in addition to the usual care of the grounds.

The city of Pittsburg is now paving Broadway street in front of the Normal, and has assessed the institution \$1987.40 as its share of the tax for pavement and curbing. It would seem proper that this item be included in the estimates for the coming biennium. The assessment has been guaranteed by ten public-spirited business men of Pittsburg, with the hope that the state will provide the amount needed at the next session of the legislature.

We are greatly in need of an electric program clock system, with a master clock in the office or corridor and a secondary clock and program bell in each class room; the master clock should be large enough to take care of such new buildings as are in prospect. The expense of such a system would probably be about \$2500.

A telephone system connecting the office with the different departments of the institution, long needed, becomes practically a necessity with the completion of the Industrial Arts Building. Such a telephone system, with batteries, switchboard, transmitters, receivers, etc., including installation, would cost approximately \$1200.

Our office books and records are constantly in danger of destruction by fire, because the institution has neither vault nor safe in which to keep them. I recommend that an item of whatever amount the Board thinks best be included in the estimates for the construction of a vault.

Such an institution as this, devoted to industrial education, should give instruction in printing and bookbinding as well as in wood and

metal work. In order to start a department of printing and binding I recommend a special appropriation of \$2500.

Turning from the material to the instructional needs, I wish to call attention to the fact that while the enrollment has increased 63.6 per cent in the past two years, the salary and maintenance appropriation has increased only 22.2 per cent. Moreover, the course of study has just been extended two years, increasing considerably the number of subjects taught, and the number will increase still more as the third- and fourth-year classes become larger. From these conditions it is obvious that a decided enlargement of the Faculty will be necessary during the coming biennium. We shall need one man, with an assistant who should be a stenographer, to give his entire time to the work of registrar, recorder and financial secretary. We shall need another who shall devote himself to extension work, which is growing rapidly in importance and is now requiring too much time on the part of our office and of regular members of the Faculty. I had hoped to be able to arrange for the establishment of these positions at the opening of the year 1912-'13, but the funds available did not permit of it. We shall need a woman of unusual qualifications to take charge of our home-economics work, including all that is now embraced in our domestic science and arts departments. From present indications we shall need two additional assistants in home economics. We shall need a professor of rural sociology and education. We shall need three or four additional instructors in our enlarged manual-training department as we develop sheet-metal and plumbing work, house and stair building, brick and concrete work, and printing and bookbinding. We shall need an additional professor of English, and another of history and social sciences. We shall need an assistant in biology. We shall need one or two well-trained critic teachers for the model school. We should be so situated that we could engage a few educators of recognized standing to give lectures or course of lectures at the summer school, in addition to the work offered by regular members of the Faculty. Moreover, the salaries of many of the members of our faculty should be increased. I hope to work out during the coming year a plan for ranking the members of the Faculty as heads of departments, professors, assistant professors, instructors and assistants, with a salary schedule for each rank, and submit it for your consideration and that of the Board of Regents. This plan, if adopted, would involve increases in salaries totalling about \$5000 per year for our Faculty of nearly forty. I estimate that the addition of new members of the Faculty as indicated above, with a small amount for special lectures in the summer school, would cost \$25,000. I ask, therefore, that an addition of \$30,000 be made to our salary and maintenance appropriation for the year 1913-'14, and that a further addition of \$10,000 be made for the year 1914-'15, making the salary and maintenance appropriation for the first year of the coming biennium \$95,000 and for the second year \$105,000. I am aware that this is an increase of 66% per cent over the appropriation for the present biennium, but it must be borne in mind that the enrollment has increased 63.6 per cent in the past two years, and also that we are extending the course of study two years, thus increasing greatly the number of subjects taught.

The number of pupils enrolled during 1910-'11 was 347 males, 659 females; total, 1006. In 1911-'12 there were 409 males, 774 females; total, 1183.

The graduating class of 1911 consisted of the following persons, 92 in all:

## LIFE-CERTIFICATE COURSE.

Alberty, Luman H., Pittsburg.	Dixon, Laura, Baldwin.
Alexander, Veta M., Pittsburg.	Dudley, Edward C., Duluth, Minn.
Allen, Mabel, Baxter Springs.	Durkin, Margaret, Weir.
Barnes, Bertha, Blue Mound.	Duvall, L. M., Wetmore.
Baxter, Myrtle, Pittsburg.	Errebo, C. F., Vesper.
Benton, Fidelia, Topeka.	Fisher, Maude, Cedarvale.

## *Report and Recommendations of Board.*

---

*To His Excellency W. R. Stubbs, Governor of Kansas:*

DEAR SIR—The Board of Penal Institutions, being *ex officio* the Board of Directors of the Kansas State Penitentiary, submits herewith for your consideration the eighteenth biennial report of the institution, which includes the fiscal years commencing July 1, 1910, and ending June 30, 1912.

This report includes the report of the warden, which embodies the reports to him from the heads of the several departments of the prison. These various reports clearly show the financial and business details of the institution, and to them we respectfully direct your attention.

During the first year of the period covered by this report the Board consisted of Messrs. E. E. Mullaney, T. C. Ballinger and E. R. Ridgely. On July 1, 1911, the Board of Penal institutions, created by the legislature of 1911 session (see chapter 298, Session Laws of 1911), assumed control of the institution, succeeding the Board of Directors above named. The new Board, appointed by your excellency for terms of one, two and three years respectively, consists of Joseph H. Hazen, Thos. W. Morgan and E. E. Mullaney.

J. K. Coddling has been warden of the Penitentiary during the entire period covered by this report, and has continued in a most satisfactory and successful manner the work begun in the earlier years of his administration. Warden Coddling brings to the consideration of the problems of his official position a degree of interest and zeal, coupled with intelligence, sympathy and good judgment, that eminently fits him for the place he holds. In his treatment of inmates as well as officers he is kind but firm, thus preserving a spirit of good will throughout the institution without any impairment of the required discipline.

### CALDWELL LAND AND MINERAL RIGHTS.

By sections 1 and 2, chapter 300, Session Laws of 1911, the legislature authorized the purchase of ten acres of land east of the Penitentiary, together with all the coal and mineral rights thereunder, and the purchase of the coal rights under the south portion of the southwest quarter of section 19, township 9 south, range 23 east, in Leavenworth county. The Board purchased the ten acres of land with the mineral rights and eighty-eight acres of coal rights, immediately adjoining the Penitentiary on the south, for \$13,000. The property thus acquired will be of great convenience and benefit to the institution.

**M'GEE LAND.**

In the biennial report of 1909-'10 the Board strongly urged the purchase of the north half of the northwest quarter of section 30, township 9, range 23, in Leavenworth county. This land lies within eighty rods of the Penitentiary and is excellent gardening and truck-farming land, every bit of it being subject to cultivation. The legislature of 1911 did not authorize the purchase of the land, but did appropriate \$8000 to buy the coal rights under said land. The Board purchased from the owner, Lena Yohe McGee, the coal rights for \$4000, one-half the amount allowed by the legislature, and secured in the name of Mr. G. C. Smith, president of the People's National Bank, Kansas City, Kan., an option on the surface of the eighty acres, for the benefit of the state, for \$125 per acre, the option subject to the action of the legislature. The warden strongly recommends its purchase in his report to us, and we as strongly recommend it to your excellency. The value to the prison table of the products of a vegetable garden is very apparent, and the cultivation of the garden is beneficial to a class of prisoners that can not stand the confinement of shop and mine. The land used for gardening at the present time is sloping, clay hills and worn-out bottom land that should be cropped to clover or other grass for a number of years to bring back its fertility.

**TUBERCULAR HOSPITAL.**

Because of there being scarcely any tubercular patients to put in the hospital, there being a decrease in the past three years of that class of cases, the Board has constructed on one of the highest points on the prison farm a small wooden building admirably fitted to take care of all the tubercular patients that we have. This made it unnecessary to expend the appropriation for a larger tubercular ward, and the \$2000 appropriated has been, and will be, recovered back into the state treasury, and it is the recommendation of the Board that a general hospital be built inside the prison walls, the upper floor being used for tubercular patients. Dr. S. J. Crumbine, secretary of the State Board of Health, in making his annual investigation of the Penitentiary used the following language in regard to the needs of a general hospital and its use for tubercular patients:

"The hospital is unsatisfactory as to arrangement and wholly inadequate as to the needs of the institution, but as effective as possible under the circumstances. A new hospital should be built, and because the number of tubercular patients is small and likely to remain so, the problem of their care could easily be solved by building a pavilion on the roof, communicating with a tuberculous section of the building, having no direct connection with the rest of the hospital."

**U. S. CIVIL PRISONERS.**

We recommend that the United States civil prisoners now being kept in the female department be returned to the United States government and no more be accepted. The compensation is not sufficient to reimburse the state for the care of the prisoners, and the facilities for handling them are not adequate.

And we further recommend the repeal of section 8580, General Statutes of Kansas, 1909, authorizing the keeping of United States civil prisoners at the State Penitentiary.

**PUMPING PLANT.**

The present equipment for furnishing water consists of four boilers, ranging from twenty years to thirty years in service, and two antiquated pumps. This equipment will have to be replaced with new machinery unless an electrical pump is established at the pumping station. The state already owns the poles to carry the wire and the electrical generator to furnish the current, the electrical pump being the only thing necessary to establish this modern power. We would recommend that the sum of \$5000 be appropriated for this purpose and that an additional \$500 be appropriated to repair the old boilers and machinery now at the pumping station, so that a reserve power, in case of accident to the electrical pump, may be ready for service. By repairing the present pumping plant the necessity of a duplicate system of generators and electrical pumps can be avoided, the present steam plant taking the place of an additional electrical pump and generator.

**THE MINE.**

The legislature of 1911 appropriated \$5000 for new roofs, steel fan and steel tower at the mine. The dangerous character of the old wooden tower, grease-soaked and inflammable, and the obsolete method of handling the coal at the top of the mine, necessitating the work of forty men, made this improvement absolutely necessary. But the Board finds that the \$5000 appropriated for the steel tower, roof and fan is inadequate to properly complete this equipment, as steel cages, steel cars and dumping facilities are necessary, and to properly complete the improvement contemplated by the legislature will necessitate the using of \$3000 of the maintenance and repair fund, which can be illy spared from this year's appropriations. The Board recommends that this fund be augmented by an appropriation of \$3000 to cover the amount taken out of the general maintenance fund. When this improvement, at the cost of approximately \$8000, is completed, the work that is now being done by forty men will be done by four men, releasing thirty-six men, whose services will be used profitably in other departments of the institution. The mining laws of

Kansas require that each mine be equipped with an escape or air shaft, so that in case of any accident to the main shaft the miners may be safely taken out of the mine. We recommend that this shaft at the Penitentiary be equipped with steel tower, cages and steel roofs, the same as the main shaft has been equipped, and that a new hoisting engine be purchased to take the place of the condemned one now being used at this shaft, and that provision be made for retimbering this shaft, as well. This will require a special appropriation of about \$15,000, and we further recommend that \$5000 be appropriated, in addition to the above sum, for the purpose of boilers at the mine top, to take the place of the ones that should now be condemned.

#### THE TWINE PLANT.

The past biennium has been the most successful in the history of the twine plant. During the two past years 5,827,077 pounds of twine have been manufactured and sold. The quality of the twine has been greatly improved, new machinery has been added and will be added, which will further improve the quality. While the price to the retail trade has been more than a cent per pound cheaper than the price of trust-made twine, the state has made a profit on its two years of twine business of \$48,268.71. The Board is contemplating the purchase of additional machinery that will permit the making of three-quarters of a million more pounds per year, in an effort to supply the growing trade at the plant. This machinery will be installed as soon as the expenditure has been approved by the attorney-general and auditor.

#### THE FARM.

During the past biennium the improvement of the farm and the increase of its products have been pushed more than previously. We believe that to increase the operation of the farm will be a saving and at the same time furnish the kind of employment most beneficial to the prisoner. We recommend that the sum of \$2000 be appropriated for the purpose of buying work stock, and that a number of the worn-out mules now used in the mine and on the farm be sold and the proceeds applied to the purchase of other mules, in addition to the \$2000 asked for. The Board has authorized the building of a silo, and, if its use is found practicable, contemplates having others built.

#### CELL HOUSES.

In the report of the Board two years ago it was recommended to the legislature that an appropriation be made for the purpose of removing each alternate partition between cells. The legislature appropriated for this purpose \$4000, but on investigation we found that to do this would not be practicable; that after the money was expended we would still have out-of-

date and poorly ventilated cells. With the exception of a few repairs, we have turned back, and will turn back the coming year, all the money appropriated for the purpose. We believe that the present cell buildings are sufficient, and that if about \$15,000 was expended in each cell building for new cells, with modern equipment, the proper results would be obtained. We join the warden and physician in their condemnation of the present cell facilities, and we recommend that the sum of \$15,000 be appropriated for the coming biennium to install a new and modern cell block in the south-wing cell house.

#### CRIMINAL INSANE HOSPITAL.

The legislature of 1911 established at this institution a hospital for the criminal insane. The constitutionality and legality of this act was tested in the supreme court, and the power of the legislature to establish upon the Penitentiary grounds an institution of this kind was upheld. A number of patients have come to this institution, but no appropriation has ever been made for the establishment of an insane ward or building. We believe that for the next two years it will not be necessary to erect a new building, and that the present insane hospital can be utilized for this purpose, provided the legislature makes an appropriation sufficient to build a modern and up-to-date hospital, thus removing from the present insane ward the hospital now conducted in the upper rooms of the building. At the present time we are using the entire upper story of our insane-ward building for the two surgical operating rooms, and the cells for the convalescent prisoners who are injured in the mines and who are recovering from the effects of surgical operations. We have some twenty large, airy and roomy cells being thus used for hospital purposes which can be used for the criminal insane if a modern hospital is built to take care of all of the hospital work. The building of this hospital is an imperative necessity.

#### A NEW PENITENTIARY NEEDED.

We desire to call the attention of your excellency and of the legislature to the fact that the physical plant of the Kansas Penitentiary is for the most part in poor condition and thoroughly out of date. The state of Minnesota abandoned a Penitentiary equipment that is better in many respects than ours. Those who are charged with responsibility in this matter should realize that it will be necessary either to make a large appropriation each year for a term of years, beginning at once, to reconstruct the various antiquated buildings of the institution, or else to appropriate a lump sum of from \$350,000 to \$500,000 to build a new penitentiary.

**FUNDS SHOULD BE REAPPROPRIATED.**

A desirable feature of the appropriation bill for the coming biennium would be a section reappropriating for the use of the Penitentiary all such sums arising from the sale of Penitentiary products as are not needed for consumption in the institution. This is a matter of vital importance.

In conclusion we wish to express our thanks to your excellency for the interest you have shown in the welfare of the Penitentiary, the many courtesies we have received at your hands, and for the generous aid and encouragement you have given us in the discharge of our official duties.

We wish to thank Warden Codding for his many courtesies to the Board, which have served to lighten and make pleasant our duties, and also to commend the officers and employees of the institution for their faithfulness and zeal.

Respectfully submitted.

THOS. W. MORGAN.

E. E. MULLANEY.

J. H. HAZEN. •

## *Warden's Report.*

---

### *To the Honorable Board of Penal Institutions:*

GENTLEMEN—A former president of the American Prison Association, Amos W. Butler, says:

"The convict is a man. His nature is essentially that of every one of us. In considering prison systems let us not forget the man—the spirit—the soul. The same things that act upon free men act upon prisoners. The same teaching and preaching, the same kindness and humanity which reaches the boy in the high school will reach the boy in the reformatory or the man in the prison."

This definition of the prisoner is the modern as well as the correct one. The convict's presence in the Penitentiary is proof that he is a defective, a delinquent or degenerate, and that organized society has sentenced him to the Penitentiary primarily because it considers him a misfit, and secondarily because it desires that he should be repaired if possible and returned to civil life fit to discharge the duties of citizenship as soon as possible.

In the repair of broken men and the remaking of defective ones, it is necessary that they should have:

First—Productive labor, and plenty of it.

Second—Discipline, wisely and firmly administered.

Third—Proper bodily care, such as wholesome food and medical treatment.

Fourth—Such mental and spiritual training as is possible under the limited opportunities afforded by a penitentiary.

Fifth—Prison recreations, not solely for the purpose of giving pleasure to the prisoners nor as a prison fad, but for the same reason that we give them work, discipline and wholesome food.

The foregoing program has been carried out during the past biennium. Results of it are noticeable in the reports of the various departments. The real result of the past two years' management of the Penitentiary can not be shown in figures, but is found in the sentiment of the prisoners; in their willingness and their ability to do the work assigned them; their almost uniform kind and courteous treatment of the officers; the absence of any destruction of prison property; in the few punishments; and in their general cheerfulness and obedience. These are the real tests of successful prison management, yet they can only be made apparent to those in actual charge of the institution. During the past two years the "Man" in

the Penitentiary, his care, development and training for future citizenship, has received the first consideration.

Second to the "Man" has been the business interests of the institution, represented in its coal mine, brickyard, twine plant, farm and other activities. Each department has been pushed for results. The increased profits of the twine plant, the largest in its history, for two years; the output of the coal mine and brickyard and the helpfulness of the farm are shown in figures in these various departments. A general system of up-keep of fences, farm machinery and buildings has been followed. A new engine and boiler room, 170 feet long, 48 feet wide and 20 feet to the eaves, constructed of brick, has been built from the foundation by prison labor, with brick and lime produced in the same way. The island is furnishing the prison all the props and timber needed in the mine operations. The sawmill machinery has been consolidated and placed in charge of the superintendent of the brickyard. A rock crusher installed in the brickyard under this management furnishes rock for the construction of rock roads on the prison farm and in the county.

Many economies are being practiced, as will be evidenced by the report, namely: The sale of cinders, the decreased cost of operating the farm, the small amount per capita used in clothing, the small number of officers employed, and many others that are shown in the reports of departments.

#### THE OFFICIAL FORCE.

The present official force has been selected under the civil-service rules of this institution. Each officer employed has been tried out for a month before being permanently placed on the force, and each man has been selected because of his apparent fitness for the office; this without regard to his political affiliations and without any pull or push from politicians. I believe that the Penitentiary is nearer out of politics and that politics is nearer out of the Penitentiary than ever before in its history, and I think it due to the officers of the institution to say that a more courteous, prompt and efficient lot of prison officials can not be found in any other Penitentiary in the United States.

#### THE NEEDS OF THE PENITENTIARY.

This institution is less of a burden to the taxpayers of the state than any other state institution, and yet it has less money to spend, poorer equipment, more ancient buildings than any other state institution. We need a large, roomy, modern cell for each prisoner. The little dingy, dark holes-in-the-wall—damp, musty and disease-breeding—are an absolute disgrace to Kansas.

We need a modern hospital, where we can take care of our sick and injured.

We should have a law authorizing the payment of a wage to

the prisoners who have families dependent upon them. As it is now the punishment falls on the wife and children at home, who have in no way been responsible for the crime committed by the husband and father.

We should have more land for gardening and farming.

A better salary should be paid to the officers.

Electric haulage should be established in the mine and an electric pump at the pumping station.

A general clearance sale of old wagons and worn-out mules and ancient farm machinery, as well as dangerous boilers in the engine room, should take place, and first-class stock and equipment purchased.

The administration building should be repaired from foundation to roof.

Before taking up the specific departments, I desire to express to you members of the Board the appreciation of myself and family and the officers of this institution for the kind and courteous treatment you have exhibited towards all of us and for the ability you have shown in directing the affairs of this institution.

I submit herewith the reports to me of the following departments: Record clerk, chief clerk, chaplain, physician, mine superintendent, twine superintendent, superintendent of brickyard, superintendent of clothing, storekeeper, farmer, parole officer, and woman's department, as a part of my report to you.

FROM THE RECORD CLERK.

The report of the record clerk gives the details for many interesting deductions. A total of 574 prisoners were received during the two years. Forty of these were United States prisoners, so are not part of the Kansas prison population, as they come from United States courts of other states, the majority from Washington, D. C. Kansas courts sent 534 persons to the Penitentiary. In the preceding two years, 1909-'10, Kansas had 570 sent to the Penitentiary, a decrease of over 6 per cent. The total number of prison inmates on June 30, 1912, was 909; of these 38 were United States' prisoners.

The age of those sent to the Penitentiary shows a slight advancement in the last two years over those of the same preceding period. During the present biennial period 58.8 per cent of the newcomers were less than 31 years old, and 10.9 per cent were less than 21 years old. For the two prior years the percentages were 64.8 and 16.6 per cent, respectively. The table that follows gives the ages and comparisons in detail in ten-year periods:

TABLE I. Age of prisoners committed in biennial period ending June 30, 1912, and comparison with prior biennial period.

Age.	—1910-'12.—		—1908-'10.—	
	Number.	Per cent.	Number.	Per cent.
20 years or less.....	63	10.9	133	16.6
21 to 30 years.....	275	47.9	411	48.2
31 to 40 years.....	141	24.5	170	19.5
41 to 50 years.....	67	11.8	91	10.4
51 to 60 years.....	21	3.6	31	3.6
60 years or more.....	7	1.3	16	1.7
Totals .....	*574	100	†852	100

\* Includes 40 United States inmates.

† Includes 282 Oklahoma and United States inmates.

Of the 574 inmates who arrived this biennium 76.1 per cent left home before they were 21 years of age. It may be noted that 58.8 per cent of the total number of inmates arrive at this place before they are 31 years of age. The details for age at time of leaving home will be found in table 10 of the record clerk's report.

There were 594 prisoners released from the Penitentiary in the biennial period. The average length of sentence was 3 years, 9 months and 9 days. This is an increase of 2 months over the preceding biennial period. Of those released, 213, or 35.8 per cent, served a longer time than the average; 27.1 per cent, or 161, served less than 2 years; 475, or 79.9 per cent, were confined for less than 5 years. Over 2 per cent served more than 10 years. The longest term served was 22 years. The number of life term prisoners released was 4; they served an aggregate of over 54 years, the average time of each being 13 years, 1 month and 15 days. Three life men died in the two years within the prison. The average time of their confinement before released by death was 10 years, 1 month and 4 days. The details are found in table 3 of the record clerk.

More than one-half of the arrivals in the past two years are without marital ties—350, or 61 per cent. More than one-third have a wife and family—203, or 35.5 per cent. Twenty-one had been married, but were not living with their families. The widowers numbered 31, the widows 7, and 27 were divorced. The following table gives the details:

TABLE II. Showing marital relations.

	Number.	Per cent.
Not married .....	350	61.0
Married now .....	203	35.5
Married but separated .....	21	3.5
Totals .....	574	100
Wife or husband dead .....	38	6.6
Divorced .....	27	4.8

Sixty-three per cent—362—of the 574 newcomers state that they were users of intoxicating liquors, while 37 per cent were nonusers. Of those received in the preceding biennium 73.3 per cent were liquor users, a decrease of 10 per cent.

Those idle when their offense was committed number 213, or 37 per cent; in the prior biennium this percentage was 41.6. The average period of idleness preceding the commitment of crime was 41 days; the prior two years showed an average idleness of 64 days.

The education of those who were received during the biennial period was considerably below normal. Those unable to read or write were 7 per cent of the total. This is more than double the average illiteracy of the state. Two per cent had less than one year schooling; 36.8 per cent had one to four years in school—barely able to read and write. These total 46 per cent who were either without education or less than four years schooling. Those who had the advantages of the graded school to the extent of reaching high-school standards are 43.7 per cent; 9.6 per cent had a high school or more advanced education. There were four college men. (See table 5, report of record clerk.)

Sixty-three, or 10.9 per cent, of the prisoners received in the biennial period had definite sentences varying from one year to life. There was one 99-year sentence, and 17 were sent for the remainder of their existence; these constitute 3 per cent of the total and 27 per cent of all determinate sentences. The determinate portion of the 574 sentences shows 362, or 63 per cent, for the one-year or minimum period, while the maximum varies from 2 to 27 years. But 28, or 4.7 per cent, received a minimum of 2 years, the maximum of these ranging from 8 to 20 years. The five-year minimum is given to 68, or 11.9 per cent, with maximums of 7 to 21 years. Six- and ten-year minimums are each 37 in number, being 12.8 per cent of the total. The maximums for the 6-year men run from 15 to 20 years, and for the 10-year people 12 to 50 years. (See table 6, report of record clerk.)

Thirty-eight of the 909 prisoners in custody at the close of the biennial period are United States female convicts, leaving but 20 female inmates convicted in the Kansas courts; this is less than 3 per cent of the total number of convictions among the Kansas inmates. Negroes number 327, or 36 per cent, of the prison inhabitants. The negroes of Kansas are 3.5 per cent of the population; they furnish 36 per cent of the Penitentiary population. There are two less in the number of negroes now than there were two years ago. There are 7 Indians and 16 Mexicans; two years ago there were 7 Mexicans and 4 Indians. In the two years the net decrease in the number of Penitentiary inmates from the Kansas courts is two—from 878 to 871. The number of United States prisoners confined here has increased from 17 to 38—all females. (See table 7, report of record clerk.)

In the two years under consideration, 613 prisoners were released from custody of the Penitentiary. Of those liberated 186, or 22.1 per cent, served the time for which they were sentenced. For the preceding two years those who served their full sentence were 31.7 per cent of the total. The number paroled was 411, or 67 per cent; this is an increase of 3.5 per cent in the proportion of paroles over the two years immediately prior. Nearly 5 per cent of those who left the Penitentiary were transferred to the Hutchinson Reformatory. No prisoners were released by gubernatorial pardon in the two years, which marks the first biennial period in which the governor has not exercised this form of executive clemency. The governor issued 99 paroles, while the Penitentiary Parole Board issued 312. The complete details of the releases from the Penitentiary are found in table 8 in the report of the record clerk.

The nativity of the 574 prisoners received the past two years shows that but 126, or less than 22 per cent, were natives of Kansas. Those born in foreign countries number 48, or 8.3 per cent, leaving 526, or 91.7 per cent, native born. People born in Missouri, 68 in number, give Kansas 11.8 per cent of her Penitentiary inmates. The other three states that border on Kansas combined furnish about one-half as many—6.6 per cent. Texas and Oklahoma each give Kansas the same number of Penitentiary inmates—21. Of the foreign-born prisoners received in the two years Mexico furnished 35.4 per cent, or more than one-third. The details of nativity are found in table 9 in the report of the record clerk.

Twenty-three counties of the 105 in Kansas, with a population of 154,190, have sent no prisoners to the Penitentiary for the two years under consideration. Eighteen counties, with a population of 84,099, have no representative in the Kansas Penitentiary. Nineteen counties have but one man in the institution. From 13 counties, representing 35.4 per cent of the population, come 51.1 per cent, or 476 of the Penitentiary inmates. Two years ago these same counties contributed 56.3 per cent of the Penitentiary population. In 1910 but 11 counties had 20 or more inmates; in 1912 two counties are added to the 20-prisoner list. Kansas has one inmate of the Penitentiary for each 1936 of its total population. These 13 counties have one inhabitant of the Penitentiary for each 1234. It may be noticed that these counties are on the eastern and southern border of our state, with four exceptions. The three tables following give the details stated above:

TABLE III. Counties having 20 or more prisoners, and proportion to population; population, 587,627.

<i>Counties.</i>	<i>Number of prisoners.</i>	<i>Population to each prisoner.</i>	<i>Counties.</i>	<i>Number of prisoners.</i>	<i>Population to each prisoner.</i>
Atchison .....	26	1,187	Montgomery .....	41	1,322
Cherokee .....	25	1,471	Reno .....	26	1,474
Crawford .....	35	1,490	Sedgwick .....	46	1,687
Douglas .....	26	934	Shawnee .....	56	1,087
Johnson .....	20	886	Wyandotte .....	77	1,351
Labette .....	34	1,004			
Leavenworth .....	40	1,005			
Miami .....	24	789	Total .....	476	

TABLE IV. Counties having no prisoners in two years; population, 154,190.

Chase.	Greenwood.	Meade.	Stanton.
Cheyenne.	Haskell.	Morton.	Thomas.
Decatur.	Hodgeman.	Osborne.	Trego.
Gove.	Jefferson.	Pottawatomie.	Wabaunsee.
Grant.	Kiowa.	Rawlins.	Wichita.
Greeley.	Lincoln.	Rush.	

TABLE V. Counties having no penitentiary prisoners; population, 84,099.

Cheyenne.	Hodgeman.	Rawlins.	Stevens.
Decatur.	Kiowa.	Sheridan.	Thomas.
Grant.	Meade.	Smith.	Trego.
Greeley.	Morton.	Stanton.	Wichita.
Haskell.	Norton.		

Of the 909 inmates, 332, or 36.6 per cent, have served previous sentences in penitentiaries; over one-fourth are serving their second sentence, and others in varying proportions have served penal time to twelve sentences. The newer inmates do not show so large a proportion of recidivists, only 28.4 per cent being repeaters, as against 36.6 per cent in the total body; only 20.8 per cent are second termers, as against 25.3 per cent of the total. The following table gives the details:

TABLE VI. Showing number of prison terms for 573 received during biennial period, and the total 909 inmates.

Term.	573 RECEIVED.		909 INMATES.	
	Number.	Per cent.	Number.	Per cent.
First term .....	411	71.6	577	63.4
Second term .....	119	20.8	230	25.3
Third term .....	30	5.2	63	6.9
Fourth term .....	8	1.4	28	3.1
Fifth term .....	4	.8	6	.6
Sixth term .....	.....	.....	3	.3
Seventh term .....	.....	.....	1	.2
Twelfth term .....	1	.2	1	.2
Totals .....	573	100.0	909	100.0

The slight increase in the age of the new inmates and the larger percentage of first-termers are encouraging indications, showing a diminution of the more serious juvenile crime and that the older anti-social are either absenting themselves from Kansas, being reformed, or have an increased fear of the law's punishment.

The 534 people from the Kansas courts who came to the Penitentiary in the past two years were found guilty of sixty-five varieties of offenses as defined by technical law. Grouping these offenses under three heads, as against society, against persons, against property, it is found that the offenses against property are largely in the majority. The following table gives such grouping:

TABLE VII. Showing character of offenses.

Kind of crime.	Number.	Per cent.
Against society—bigamy, seduction, perjury, etc. ....	80	5.5
Against persons—homicide, assault, robbery, rape, etc., ..	179	33.5
Against property—arson, burglary, larceny, forgery, embezzlement, etc., ..	325	61.0
Totals .....	534	100

Four are prisoners because of keeping a gambling house, two for selling liquor, two for failure to care for their family; there are an even 100 for manslaughter, assault and murder, and there are 48 here for forgery. (See table 4, report of record clerk.)

## FROM THE CHIEF CLERK.

The report of the chief clerk gives a succinct statement of the earnings and expenditures of the plant, supplemented by a detailed statement of the disposition of the brick and coal sent to the various state institutions.

The value of coal shipped to state institutions aggregated \$193,822.58, covering the 72,119 tons of coal shipped. Brick were shipped to state institutions to the number of 4,253,750, their value being \$26,312.24.

One of the items of expense that is not often found is shown in table 2, being the amount of money paid to prisoners during their confinement and upon their discharge, the aggregate sum in the two years for this purpose amounting to \$21,597.79.

This Penitentiary has for some time ceased to be merely a penal institution; it covers a large business field, aggregating about a quarter of a million dollars in value annually. This business is not carried on without what are known in business parlance as "overhead expenses." Ordinarily in penal institutions money for salaries is devoted exclusively to the guarding and management of the inmates, and for the necessary care, food and clothing. The productive branch of most penitentiaries is under the control of outside men, but in this institution the pay roll includes the administrative officers as well as the direct prison force. The chief clerk, in table 1, puts the salaries of the administrative officers at a total of \$56,727.17 while that of the overseers connected directly with the prisoners he places at \$98,796.84. It will thus be seen that 34.7 per cent of the salaries are devoted to the "overhead charges," while for the actual overseeing and directing of the prisoners we have 65.3 per cent. The reading of the chief clerk's report, if done in connection with that of the storekeeper, will furnish a very complete idea of all the details of income and expense for the institution. In each year the administrative officers have numbered 28. In 1911 the overseers numbered 73, and in 1912 this was reduced by 5, to 68, though the average number of inmates increased from 896 to 927.

*Annual per capita expense.*

For food—purchased, \$50.30; from farm, \$16.44.....	\$66.74	
Clothing .....	14.55	
Housing, including bedding and all cell accessories.....	4.57	
<b>Total .....</b>		<b>\$85.86</b>
Cost of overseers.....	54.20	
Cost of administrative officers.....	31.12	
Cost from salary and maintenance appropriations.....	200.50	
Cost from total appropriation, including permanent improvements and all other expenses .....	214.08	

The average number of overseers employed is 70.5 men, or one overseer to 12.9 men; average number of administrative officers, 28, or one to 32.5 men; we have one officer (administrative and overseers) to 9.2 men. Of the salary list, \$56,727.17, or 34.7 per cent, goes to administration; \$98,796.84, or 65.3 per cent, goes to overseers. Of the total expense for the institution for the two years—\$390,205.22, an average of \$195,102.61 annually—\$155,524.10, or 39.8 per cent, go for salaries. The table gives the annual per capita cost of food, farm products included, at \$66.74; clothing at \$14.55; housing (cost and care of building not included), bedding and cell accessories, at \$4.57; overseeing at \$54.20; a total of \$140.06.

In 1905 the United States Commissioner of labor gave the average annual cost for all adult penal institutions in the country as to food, clothing and employees. These United States' figures and those for Kansas covering this biennium compare as follows (see report of Commissioner of Labor, 1905, *Convict Labor*, page 611):

	<i>Kansas.</i>	<i>United States.</i>
Food .....	\$66.74	\$51.37
Clothing .....	14.55	16.77
Employees, etc. ....	54.20	56.65
<b>Totals .....</b>	<b>\$135.49</b>	<b>\$124.69</b>

In the years since 1905 the advance in the price of food is a fact known to all. For the three items compared—the only ones given that are of like character—Kansas shows an excess cost of \$10.80. The excess shows in the one item of food, and amounts to \$15.37; the cost of employee and clothing are each less for Kansas. It may be noted that the value of farm products for the Kansas Penitentiary, used for food, amounts to \$16.44; thus the farm makes good the deficiency and has \$1.07 to apply on the purchased food. The average amount per capita, \$214.03, which covers all the money appropriated to the institution, varies largely from year to year, depending entirely upon the sums devoted to permanent improvements, repairs, etc. The salary and maintenance list is also much affected by the kind of work done and the improvements made. The salary and maintenance per capita is \$13.53 less than the total per capita, which gives an index to the cost of permanent fixtures and repairs.

#### THE TWINE PLANT.

The twine plant made 5,938,350 pounds of twine in the two years under consideration; 5,827,415 pounds were sold. The sales for 1912 up to June 30 exceeded those of 1911 by 1,603,829 pounds. The total value of the twine sold was \$357,709.90; the net profits were \$48,268.71. At the end of the biennium the twine plant revolving fund was \$293,842.21.

#### FROM THE STOREKEEPER.

The provisions consumed during the biennium were valued at \$121,686. Of this value \$29,974.62 was produced from the farm and \$91,711.88 was secured by purchase. The daily per capita value of food bought was 13.7 cents; from the farm, 4.5 cents. It is with satisfaction that we note the increased value which the farm enables us to put in the daily ration of the inmates. The farm not only provides a greater variety of foodstuffs, but by care in the preparation of the food bought, the milk, pure lard and eggs, adds much to the palatableness of the meals served, as well as giving a much more "balanced ration." The last consideration is quite as valuable in feeding men as in bringing animals to the most healthful and profitable condition.

Table 9 gives a statement of the average amount of staple foods consumed annually per capita by the inmates. It will be seen that 1.1 pounds of meat, nearly one pound each of flour and potatoes, is the average daily consumption per capita of these basic foods. Fifteen articles of food are covered by the compilation.

For clothing \$26,536.85 was expended, an annual per capita expenditure of \$14.55. This includes suits, underwear, shoes, hats and gloves. The cost of housing supplies, viz., bedding, towels, soap and cell-house accessories, was \$4.57 per capita for each year. For these three items we have an annual per capita expenditure of \$35.86, or 23½ cents per day. The details for these expenditures are found in tables 1 to 7, inclusive, of the storekeeper's report.

Table 8 gives a detailed account of the value of materials issued to the different departments of the Penitentiary. This table is interesting not only because of the values enumerated, but also as giving a condensed list of the variety of departments which it is necessary to maintain. These various departments required an expenditure of \$209,628.01.

#### THE FARM.

This is one of the most valuable adjuncts to the Penitentiary welfare. As an industrial proposition it pays its own way, and in the past two years has returned a fair profit. It provides productive employment for quite a number that are physically incapacitated for other work, and permits the use of men whose terms will soon expire. This work the farm provides in just such proportions as is suited to the strength and capability of the weak and untrained. To those who become shopworn by long employment in the various industrial plants inside the walls it furnishes an opportunity for an outdoor life that is helpful to health

and invigorating to mentality. For men about to leave the prison after years of labor in shop or mine it proves a profitable and helpful means of contact with earth and air which they will have when freedom comes, thus enabling them to appear in public without the "prison pallor" or "cell-house nerves."

As will be seen by the report of the farm superintendent in his list of products, the farm enables the giving of wholesome and varied food, which it would be quite impossible to buy. A "boiled dinner" occasionally is quite as acceptable, healthful and profitable to a prisoner as to one who is not, and the farm makes possible such meals at intervals long enough apart to add to their appreciation.

It is quite possible that a larger monetary value might be taken from the farm were it deemed advisable to put a larger force of men and men of more physical force to work upon the land; but the judgment has been proven good that devotes the farm to producing food that would be practically unobtainable, and using it as an employment place for men who need regular and outdoor employment rather than indoor labor and confinement.

#### FROM THE PAROLE OFFICE.

During this biennium 413 men have been paroled; 20 of them, or 4.8 per cent, have been returned for violation of their parole; 19, or 4.6 per cent, have been discharged; 4 have died, and 51, or 12.3 per cent, are delinquent, leaving 319 now on parole for the period under consideration. The total number of paroles issued since the parole law was enacted, in 1908, is 645; 53, or 8.2 per cent, have been returned to the prison.

#### CHAPLAIN'S REPORT.

The report of the chaplain is hopeful and pregnant with suggestions. The religious work has been active. The Prison League, a purely voluntary organization, has increased from 152 to 300 members. This not only is indicative of the increase in religious sentiment, but its good effects are seen in matters of discipline and better conduct. The report of the school work and the need of increased facilities are distinctly set forth, and I concur in the recommendations. The work done by the Chouteau relief fund and the committee in charge emphasizes the need of the prisoners' families. Those dependent ones must live, and there seems to be no adequate provisions for them when the natural provider is taken away. Likewise, the men who are paroled or discharged have in many cases only their labor, which they must find a market for and live while making the search. The Chouteau fund has been very helpful to these men. This fund has been so well managed, and appeals so strongly to those who know its object, that over \$5000 has been handled. The chaplain's report in its entirety is worthy of earnest consideration.

#### THE PHYSICIAN'S DIAGNOSIS.

Of the 909 present inmates, 288, or 31.6 per cent, went under the physician's care immediately upon their arrival at the institution; 48 of these were totally disabled when they came. The records show that 542, or 59.6 per cent, of the 909 had been or were affected with venereal disease. This is not a bright outlook, from a physical standpoint, for a start from the free social life to that of penal servitude. However, the report shows that after a sojourn here varying from several months to four years, the average gain in weight is 6.8 pounds per man. More adequate hospital facilities and increased room for the insane are needed, and the physician shows why. Under a new law passed by the last legislature we have received seven insane from other institutions. A net gain of eleven insane in the two years are in the insane ward.

I concur in the criticism of the sleeping arrangements in the cell houses, and ask earnest consideration for the same. The tubercular situation is subject for congratulation. There was but one death from

that cause this biennium, though nine cases were treated. With an average population of 911.5, we have had but 11 deaths in the two years; 3 of these were among the insane. The following table gives the death and tuberculosis rate per 100 inmates for the past 12 years, as taken from the reports of the different physicians:

TABLE showing death and tuberculosis rate for 12 years, 1900-'12.

Year.	Av. No. inmates.	DEATH RATE FOR 12 YRS.		RATIO PER 100.	
		All causes.	Tubercu- losis.	All causes.	Tubercu- losis.
1901.....	1,015	10	3	0.98	0.28
1902.....	1,038	14	3	1.25	0.29
1903.....	1,074	9	3	0.84	0.27
1904.....	1,123	10	4	0.89	0.35
1905.....	1,157	9	4	0.78	0.34
1906.....	1,174	14	4	1.11	0.34
1907.....	1,204	9	5	0.74	0.41
1908.....	1,198	12	4	1.01	0.33
1909.....	1,078	10	8	0.92	0.74
1910.....	860	6	1	0.71	0.12
1911.....	896	8	1	0.89	0.11
1912.....	927	3	0	0.32	0.00

From this it will be seen that the highest death rate was in 1902, when the rate exceeded one to each 100 inmates; in 1912, ten years later, the death rate is less than one to each 300. Tuberculosis had its highest rate in 1909, when there was one death from that cause to each 125 inmates; in 1912 there were no deaths from this cause.

The physician notes that the cost for drugs and surgical dressings is practically one dollar per year for each inmate.

Respectfully submitted,

J. K. CODDING, *Warden.*

## REPORT OF RECORD CLERK.

*J. K. Coddington, Warden:*

SIR: I herewith submit to you the statistical report of the record office and bureau of identification for the fiscal years ending June 30, 1911, and June 30, 1912.

## REPORT OF CASHIER OF TWINE PLANT.

*J. K. Coddington, Warden:*

DEAR SIR—I herewith respectfully submit report of twine account for fiscal years ending June 30, 1911, and June 30, 1912.

## STATEMENT OF TWINE ACCOUNT. YEAR ENDING JUNE 30, 1911.

Inventory, July 1, 1910 .....	\$28,061.13	
Expenditures to July 1, 1911.....		166,559.54
Total .....	\$189,620.67	
Less inventory of July 1, 1911.....		18,568.27
Cost of 3,129,600 pounds twine at \$0.0546+ .....		\$171,052.40
Balance twine account.....	\$163,086.14	
Bills receivable, as per ledger .....		\$99,819.14
State treasurer.....		53,862.79
Cash on hand.....		9,354.21
Totals .....	\$163,086.14	\$163,086.14

## INVENTORY, JULY 1, 1911.

Cash and bills receivable.....	\$163,086.14	
Twine, 1,470,400 pounds, at \$0.546 .....	80,136.80	
Sisal, 376,560 pounds, at \$0.04½ .....	15,297.75	
Sisal, 15,538 pounds, at \$0.045.....	700.00	
Bags, 3670, at \$56.15 .....	206.07	
Tags, 147,500, at \$0.14½ .....	21.15	
Oil, 4870 gallons, at \$0.06.....	292.20	
Degras, 19 barrels, at \$10.20 .....	193.80	
Color .....	35.30	
Belting and gears .....	222.50	
Bobbins and heads .....	216.00	
Castings.....	123.00	
Asphalt, two barrels, at \$17.50.....	35.00	
New breaker.....	1,100.00	
Office furniture.....	100.00	
Stationery and postage.....	25.00	
Revolving fund.....		\$150,000.00
Profits to July 1, 1910.....		94,983.07
Profits to July 1, 1911.....		16,778.14
Totals.....	\$261,741.21	\$261,741.21

SALES FOR YEAR ENDING JUNE 30, 1911:	
2,111,793 pounds; average price, \$0.06098 .....	\$128,796.27

## STATEMENT OF TWINE ACCOUNT, YEAR ENDING JUNE 30, 1912.

Inventory July 1, 1911.....	\$18,568.27
Expenditures to July 1, 1912.....	175,300.78
Total.....	\$198,869.05
Inventory of July 1, 1912.....	59,363.48
Cost of 2,809,350 pounds twine at \$0.0478+.....	\$134,495.57

## TWINE-PLANT REVOLVING FUND.

Twine-plant revolving fund.....	\$261,741.21
Less corrections of accounts receivable, 1910-'11.....	606.96
	\$261,134.25

## INVENTORY JULY 1, 1912.

Manufactured twine, 552,690 pounds, at \$0.05½.....	\$30,397.85
Sisal, 88,025 pounds.....	4,599.59
Sisal, 398,599 pounds.....	21,143.76
Premium on warden's bond.....	250.00
Oil and degrease.....	538.04
Postage stamps.....	10.00
Books and stationery.....	35.00
Office furniture.....	125.00
Machinery.....	960.00
Mule team.....	400.00
Bags.....	164.00
Tags.....	42.00
Color.....	87.50
Lashings, 832½ pounds.....	191.25
Repairs.....	474.10
Total.....	\$59,363.48

## RESOURCES AND LIABILITIES, JULY 1, 1912.

Twine-plant revolving fund, balance.....	\$261,134.25
Salaries unpaid.....	453.32
Accounts payable.....	729.01
Interest due state treasurer.....	35.06
Accounts receivable.....	\$304,615.16
State treasurer.....	18,773.94
Cash in bank.....	11,069.63
Inventory.....	59,363.48
Totals.....	\$298,842.21

## SALES FOR YEAR ENDING JUNE 30, 1912:

3,715,622 pounds; average price, \$0.0616.....	\$228,914.68

Totals.....	\$166,579.65	\$157,897.51	\$324,477.06

Respectfully submitted,

GEO. RUEDE, *Cashier Twine Plant.*

## FROM THE TWINE PLANT SUPERINTENDENT.

*J. K. Coddington, Warden :*

DEAR SIR—I submit the following report of the fiscal years 1911-'12. The business end of the plant is given in the cashier's reports. The past two years have shown a steady increase in business, it being necessary to run the mill overtime to supply the demand, and even then we were not able to do so. Hardly a week passes but what we have made some improvement in our system of manufacturing. This has been done with very little cost, owing to the fact that many of the prisoners are good mechanics. It is proper to mention the fact that a large amount of our success is due to the interest the men take in their work. Many have offered good suggestions and assisted me in many ways, for which I am very grateful.

I would suggest that we purchase fifteen jennies for our spinning department. The preparing department is rather heavy for the number of spinners we now have, and could easily furnish enough sliver for the additional spinners, and we have sufficient ballers to take care of the extra twine spun. The addition of these fifteen jennies would increase the output of the mill 750,000 pounds per year, which, if our sales of this year are to be taken as indicative of the future, will be needed.

I would suggest that another water main be placed in the mill, and that we install one fifty-gallon chemical fire engine in our No. 1 warehouse. The fan or suction system that you asked me to investigate has been looked into. I am confident that at a very small expense this can be installed, as we have a fan that can be used, and as soon as possible I will start to put it in position. This will be, in my opinion, one of the best improvements that can be made, as it will remove the dust from the mills, making it much more healthy for the men.

The average number of men employed daily has been eighty. The mill was operated continuously, with the exception of two weeks in 1911 and three weeks in 1912, when it was closed for repairs. In 1911 we manufactured 3,129,000 pounds of twine; in 1912, 2,809,350 pounds; a total of 5,938,350 pounds.

We have had a prosperous two years, and we all feel proud of what has been accomplished. We got good results without neglecting the men, morally, mentally or physically. The men in my charge are in better condition in general than they ever have been in the past.

Thanking you for your hearty coöperation, I am

Yours very truly,

JOHN L. CLINE,  
*Superintendent Twine Plant, K. S. P.*

## REPORT OF THE STOREKEEPER.

*J. K. Coddington, Warden:*

DEAR SIR—I herewith submit my biennial report for the two years ending June 30, 1912. In all computations where the per capita cost is given, the average number of inmates for the past two years considered is computed at 911.5.

TABLE 1. Provisions consumed and value; those produced on farm and those purchased.

	Quantity.	Average price.	Total value.
Meats, pounds.....	634,436	\$6.86	\$43,557.40
Flour, wheat, pounds.....	613,400	1.98	12,183.72
Corn meal, pounds.....	13,896	1.35	180.88
Potatoes, Irish, bushels.....	9,862	.86	8,073.41
Sugar, granulated, pounds.....	93,967	5.36	5,083.33
Coffee, pounds.....	33,780	13.96	7,354.65
Beans, navy, pounds.....	80,762	4.30	3,474.62
Butterine, pounds.....	26,530	10.16	2,697.59
Fruits, dried, pounds.....	33,025	6.94	2,708.48
Syrup, gallons.....	3,235	.25	2,078.59
Rice, pounds.....	18,797	3.53	663.59
Oats, rolled, pounds.....	9,932	2.54	253.00
Macaroni, pounds.....	19,619	3.00	588.57
Tea, Japan, pounds.....	2,462	.20	497.20
Other food supplies.....			2,367.09
Total.....			\$91,711.38
FOOD FURNISHED FROM FARM.			
Fruits, bushels.....	1,366		\$706.75
Pork, beef and poultry, pounds.....	121,715		12,103.43
Milk, sweet, gallons.....	46,128		9,011.36
Eggs, dozens.....	980		184.71
Fresh vegetables.....			7,968.72
Total.....			\$29,974.82
Grand total for food values.....			121,686.00

TABLE 2. Cost of food per capita bought and raised.

	Purchased.	From farm.	Total.
Average yearly cost of food per capita.....	\$50.30	\$16.44	\$66.74
Average daily cost of food per capita.....	.137	.045	.182

TABLE 3. Showing disbursement of \$91,711.38 for food bought.

	Value.
Prisoner's kitchen.....	\$53,672.11
Women's kitchen.....	3,016.44
Hospital kitchen.....	5,022.83
Total.....	\$61,711.38

Yours respectfully,  
W. K. WASHBURN, Storekeeper.

## REPORT OF FARM SUPERINTENDENT.

*J. K. Coddington, Warden:*

I submit herewith a resume of the Penitentiary farm and its activities for the two years ending June 30, 1912. Of the 700 acre-farm we are cultivating about 200. This does not include the acreage of the orchard which is seeded to clover. On the island we are cultivating about 125 acres—120 in corn—the rest in vines. We have had about the same area each year. There is a slight increase in acreage this year over last, because of land that has been cleared of brush and brought under the plow, also from land that has been reclaimed from ditches by proper filling with brush and small embankments. Some sixty acres have been fertilized in the two years by using the offal from the various barns. This has added much to the productiveness. A change in cropping has been followed that is restoring land that has been steadily used for corn for thirty years. Some forty acres of orchard has been plowed, fertilized and disked and sowed to clover, which is doing well. About three and one-half miles of new fence has been constructed and all fences repaired. Considerable ditching has been done. The farm gives employment to about thirty men during the farm season, many of whom could not be employed in any other way. The work stock on the place averages twelve mules and one horse. As a rule, the mules are from the mine and have served long under the ground. Both as to men and mules, the farm serves as a place where otherwise unavailable labor is turned to more or less value.

We have now on the farm a dairy herd of 46 cows and 1 thoroughbred bull and 124 head of young stock. The older cows are being butchered annually as they become less valuable as milkers, and the heifers are taking their places. We have about 300 hogs and shoats, 100 pigs, and 60 brood sows. During 1911 we lost 300 hogs and pigs from cholera. We have about recovered this loss as to numbers.

Last year our crops were better than the average, considering the unseasonableness; this is especially true of the field crops on Steigers' Island. This year, considering the quality of land on the main farm, the produce bids fair to be unusually plentiful. Much of the garden stuff has already shown a prolific yield. The orchard, which was thoroughly sprayed, has a bountiful crop. Among the garden crops now growing on the 50 acres devoted to that purpose may be cited: 85,000 cabbage; 12 acres of tomatoes; 25 acres of potatoes; 4 acres of turnips; 5 acres of beans; 2½ acres of beets; 2½ acres of peas; one-half acre each of carrots and parsnips; 3½ acres of seed onions; 1½ acres each of radishes, lettuce and spinach; 4 acres of cucumbers; many small patches of squashes and pumpkins on land that could not be easily handled for other crops. We have 35 acres of cane for sorghum, 12 acres of broom corn, and 3 acres of tobacco plants.

We have a hay baler, and have saved considerable by handling our own hay and straw and several fields of hay for the neighboring farmers.

A portion of our older orchard has been attacked with black rot, and we have not discovered any remedy.

Last year we raised about 1100 chickens. We now have 3000 chickens and about 100 laying hens and 81 ducks.

In addition to what has been used direct from the fields, the following amounts and values have passed through the hands of the storekeeper.

**FARM PRODUCTS, QUANTITY AND VALUE, FOR THE TWO YEARS ENDING  
JUNE 30, 1912.**

PRODUCT.	1911.		1912.	
	Quantity.	Value.	Quantity.	Value.
Apples, bushels.....	1,331	\$864.00	10	\$7.75
Beans, string, bushels.....	112	73 00	322	322.00
Beets, pounds.....	2,660	26.60	6,710	68.40
Beef, pounds.....	1,070	68.37	3,200	233.59
Cabbage, pounds.....	59,270	590.63	7,480	112.25
Cucumbers, bushels.....	4	4.00	13	21.25
Corn, green, dozens.....	2,173	217.30	2,049	362.20
Corn, field, bushels.....			145	87.40
Chicken, pounds.....			1,385	111.75
Cane seed, pounds.....	2,480	39 68	2,430	39.68
Eggs, dozens.....	195	26.19	785	158.52
Lettuce, bushels.....	11	12.00	64	32.00
Sweet milk, gallons.....	24,984	4,785.13	21,124	4,226.99
Onions, dry, bushels.....	265	202.40	156	178.50
Onions, green, loads.....	13	118.50		
Green peas, bushels.....	41	34.75	124	124.00
Potatoes, Irish, bushels.....	1,423	854.10	855	437.75
Potatoes, sweet, bushels.....	102	76.50	194	152.36
Peppers, bushels.....			16	15.25
Peaches, bushels.....			25	35.00
Pork and lard, pounds.....	76,720	8,065.00		
Pork, pounds.....			40,410	3,692.15
Rhubarb, pounds.....	6,200	31.00	6,250	62.50
Radishes, loads.....	8	15.00	14	62.22
Turnips, bushels.....	412	101.98	203	89.05
Tomatoes, bushels.....	1,325	757.10	416	271.43
Sorghum, gallons.....	922	496.25	1,240	434.00
Spinach, bushels.....			162	84.25
Wheat, bushels.....	322	305.90	584	457.10
Broom corn, tons.....	2	190.00	3/4	105.00
Pumpkins, pounds.....	6,090	60.90	3,720	37.20
Watermelons.....			1,734	151.50
<b>Totals.....</b>		<b>\$17,816.28</b>		<b>\$12,158.84</b>

This gives a total product of \$29,974.62 for the two years. To this the men and teams and farm are entitled to a fair sum for lumber, props and mine timbers which were taken from the land in the process of clearing same; also several hundred dollars for riprapping timber which was cut from the land. These last mentioned are balanced in other accounts of Penitentiary earnings.

I wish to express my thanks to you, the subordinate officers and a number of the men, who have uniformly manifested a worthy interest in all that pertains to the farm, its work and successful production.

Respectfully submitted,

B. D. MILLS, *Superintendent of Farms.*

## REPORT OF THE PAROLE DEPARTMENT.

*J. K. Coddington, Warden:*

SIR—I herewith submit my second biennial report for this department, beginning July 1, 1910, and ending June 30, 1912.

The table will show the work done during the two years. You will notice that we have nearly doubled the number on parole, also the further fact that our paroles are allowed now to live on parole outside the state, some of them as far as New York and California:

This makes the work of looking after them much greater and the expense much heavier. The number on parole will continue to steadily increase, hence a larger salary and a larger expense account, in order to attend to the work properly, seems very necessary.

The table shows that 413 prisoners were paroled from June 30, 1910, to June 30, 1912. Of this number 71 violated their parole, or 17.2 per cent. Of the 71 that violated their parole, 20 have been returned, 7 are located in other prisons, and 44 are fugitives. The table also shows that 232 prisoners were on parole June 30, 1910. Of this number 66 violated their parole, or 28.4 per cent, during the two years. Of the 66 that violated their paroles, 33 have been returned, 10 are located in other prisons, and 23 are fugitives.

The per cent of violations of paroles granted by Gov. W. R. Stubbs is nine-tenths of one per cent, which is less than those granted by the Board.

There were on parole June 30, 1910, 232 people; since that time 413 have been paroled, making a total of 645 who have been released up to June 30, 1912.

## STATUS OF PAROLED PRISONERS.

	Paroled.	Re- turned.	Delin- quent.	Died.	Dis- charged.	Number still re- porting.
From June 30, 1910, to June 30, 1912...	413	20	51	4	19	319
Before June 30, 1910.....	232	33	33	3	65	98
Totals .....	645	53	84	7	84	417

Of the 50 men returned to prison during the biennial period for parole violations, 21 were brought back for leaving the state and not reporting, 12 for intoxication, 13 for theft, 1 each for forgery and rape, and 2 for investigation.

Of the 413 prisoners paroled 102 were released by the governor. Of this 102, 12 have been discharged, 7 were returned to serve the remainder of their sentences, 3 are delinquent, and 2 have died, leaving 78.

Thanking you and your official force for the kind treatment that has been accorded me, and for the coöperation given me in my work, I beg to submit this, the second biennial report of this department.

Yours very respectfully,

JOHN HIGGINS, *Parole Officer.*

## REPORT OF THE CHAPLAIN.

*J. K. Codding, Warden:*

If the experience of the past two years could be summed up in a brief statement it might be done thus:

The good are bad,  
Once in a while;  
The bad are good,  
Twice in a while;  
But the good are not bad  
And the bad are not good,  
All of the while.

If this can be objected to it is because the good and the bad are so irretrievably mixed and dove-tailed in each person that only the All-wise can say: "This is the sheep, this is the goat."

No general classification of prisoners can be adequate. In view of the all-but-infinite possibilities of each human soul, I feel each time I question a newly convicted prisoner, no matter what the crime, that if but a portion of the soul is laid bare I am in a holy presence. The effort is to show the prisoner, from the first hour, that he or she has not become a part of a helpless mass, but that each individual faces his own future, and infinite resources are his—that the line is open from him to God.

Yet with some, a few, I am almost held back from trying to open this hope to them when the conviction forces itself upon me: "In a short time I'll have to visit this man under punishment." Laziness, viciousness, heedlessness, sullen disposition, one or the other shown from the first, leads to violation of the rules.

### PUNISHMENT IN PRISON.

I am glad to say that in this prison the infliction of physical pain, or of punishment which injures health or mind, is not approved; that the use of the dark cell is very rarely resorted to.

To those who hope to make a parole, the rule that there must be six months of good behaviour before the Board can act favorably on their applications, is the most powerful motive for obeying the rules, aside from the stronger motive, which most inmates here have—a desire to obey the rules because that is the right thing. In regard to those whose only thought is to stay until released on their maximum time, it has seemed to me that the laws should allow that a refusal to work when able, or wrong conduct, should be causes for the extension of the maximum sentence even. Violations of rules should be met with solitary confinement under healthful conditions; failure to work, by the same confinement until the prisoner is willing to return to work, and in both cases the time so spent should be added to their maximum sentence. The effect would be that some stubborn or vicious ones would have to learn to control themselves or remain in prison all their lives.

### PROSECUTION FOR CRIMES DONE IN PRISON.

Why should not those who, while prisoners, violate the statutes—as, for instance, those who commit sodomy or make an attack upon the lives of fellow prisoners or officers—be tried in court and given another sentence to be served after the current term is completed?

### SEGREGATION OF CERTAIN PRISONERS.

I wonder how long it will be until it shall become possible to segregate the vicious, unregenerate and the determined-to-be-unregenerate prisoners, so that others may be treated as would then be possible.

## RELIGIOUS WORK IN THE PENITENTIARY.

The law for the chaplain has been complied with, in that he has conducted preaching service for the inmates on every Sabbath of the year, and has performed such other duties as were required of him by the warden. He has preached at the general service required by law, except when the address was made by the warden or a visitor. Some of these visitors have been invited, and their help has been highly appreciated. In some cases the privilege of speaking to the inmates has been sought by representatives of societies or ideas, and their request has not been refused because this is a state institution, although the usefulness of the ideas advanced have been doubted in some cases.

The attendance of the League of Christian Endeavour has been voluntary and has averaged about 300. Twenty-seven have been baptized at their request, and in the manner desired by the individual. At the last semiannual communion season 108 men and women prisoners partook of the sacrament. The heart of the Christian life of the institution is found in the Sunday afternoon meeting with the teachers and officers of the League, where we spend two hours in preparing the lesson for the next meeting and in discussion. It is there that all plans are made and teachers and officers are chosen. Through these men and those whom they teach in their classes on each Sabbath goes out the touch of sympathy and Christian hope which brightens the time of prison life.

## WORK AMONG THE WOMEN.

The daily guidance of three Christian ladies, Mrs. Simpson, matron, and Miss Fitzpatrick and Miss Danner, assistants, is of untold help to the female prisoners. The sympathetic counsel of Mrs. Codding in their affairs is another great blessing for them. And the Sunday morning's training class, where Mrs. Codding presides and Miss Edith Robertson teaches, has been a great force for good in their lives. They have an opportunity to learn gentleness, purity and Bible truth through the medium of sweet womanliness. The chaplain also holds a service with the women on each Sabbath and counsels with them at other times.

## INDIVIDUAL CHRISTIAN WORK.

With every prisoner the chaplain has a conference on the first day of prison life, and each is earnestly invited to seek forgiveness from God and to accept Christ as a living friend. Afterward, from cell to cell, at the time of punishment, or in his own office, private talks are had daily with those who are willing to accept counsel. The chaplain has learned much in this way. He hopes that he has helped much.

## IMPROVEMENT IN THE MUSICAL DEPARTMENT.

Since Mr. Fred Miller, who was formerly employed in an United States Military Band, has been secured to be musical director for the prison, there has been a marked improvement in our music. This has very much added to the effectiveness of our chapel services, where the band and the choir, which is led by a prisoner, have been greatly enjoyed; and the music rendered by the choir on special occasions, in the cell houses and in hospitals, have always brought cheer to the hearers.

## NEEDS OF ADEQUATE BUILDINGS FOR SCHOOL AND LEAGUE WORK.

Twenty-seven Bible classes held in one room at the same time, and about the same number of classes in the night school with a still larger enrollment, can not do their best work under present accommodations. The attendance at both of these could be enlarged if we had proper housing, but we can not properly teach the present numbers in the buildings now at our command. As these schools are both indispensable parts of any right plan for preparing these men for future usefulness and intelligent manhood, I trust that this problem will receive due consideration.

**NIGHT-SCHOOL WORK.**

During the past winter we conducted the third session of the night school during the present administration. It had the longest term and the largest attendance and the most varied curriculum, as well as the greatest benefit to those attending, of any session of school ever held in the prison. The teaching in the men's school was entirely by prisoners, except what was done by the chaplain. The highest commendation is the need of these teachers. They did the work with a desire to help. They were not all trained teachers; they could not all obtain diplomas; but they were teaching men who knew less than they did, and they helped the pupils. Illiterate men learned to read and write; others made advances or reviewed subjects almost forgotten. The subjects taught were those commonly pursued in the grade schools, and for the more advanced pupils there were classes in spelling, penmanship, composition, bookkeeping, shorthand and Spanish. A class of foreigners studied English.

The officers, under the supervision of Deputy Warden Lindsay, were most helpful in diligently keeping order and in encouraging the pupils and teachers. It was this good will and coöperation which made the success of the school possible. The interest felt was manifested by the fact that the attendance was fully as large at the last as at any time during the term. The interest was in part maintained by the entertainments, one about the middle of the terms and one at the close, in which the men themselves took the principal parts. The teachers very much enjoyed the privilege, given them under your direction, of eating a specially prepared supper on the days of the school, with the pleasure of talking together while eating.

The school in the women's ward was taught by Miss Edith Robertson, assisted by Miss Fitzpatrick and two of the inmates. The improvement already mentioned was as apparent here as among the men, and the entertainment arranged by the women was worth going far to see.

During the time of vacation for the general schools, special classes are being held for illiterates and for the advanced work of bookkeeping, shorthand and harmony in theory of music. Those who are to be teachers in next season's work will be instructed in methods and will partly review their work.

**THE LIBRARY.**

The work of the schools requires so much time of men who work all day and are tired in the evening that we would not expect that they would read widely in other lines. But nearly 600 daily papers and an equal number of weekly and monthly publications are received by inmates, paid for by themselves, or by friends for them, and those who have not the means to get periodicals for themselves generally get to read them by the kindness of some other prisoner.

Many papers are sent in by parties who have no personal friends here, with charitable intent. I have noticed that a large part of papers so sent are from people representing sects, small and rather peculiar, who advocate ideas differing from those generally accepted by Christendom. It occurs to me that there might be a good field here for the larger denominations to give from their broad charity.

Aside from the school books and Bibles, nearly 1000 books from the library are read each month—a total of 11,913 during the past year. In twenty-four months 129 books were added to our library by purchase, 438 books added by donation from Mrs. J. P. Gamble, Mr. David Easton, the Leavenworth Y. M. C. A., and the Leavenworth public library, and a few by prisoners. Sixty-two volumes of magazines have been bound in the prison bindery and given to inmates to read.

Over a year ago the preparation of a new catalog was undertaken in the chaplain's office, but owing to the press of other work it has been delayed. It has proven a larger work than we had realized, but it is nearly done now, and I trust that it may be printed soon.

## INADEQUACY OF APPROPRIATIONS.

The legislature has appropriated \$2000 per annum to be used for the school, band, religious work, expense of chaplain's office, and part of the expense of the printing department. The needs in all these lines for over 900 inmates must be met from this appropriation.

## THE BULLETIN.

In the fall of 1909 we commenced issuing a Sunday bulletin containing the order of chapel exercises. There were added notes concerning things of interest in prison life. The need of a larger sheet was soon evinced, but the chaplain felt that he could not add this to his work, until in February of this year the demand for it became so strong that the enlargement was made. Its success was immediate, and it is proving its usefulness with each issue. It is a medium for the discussion of ideas vital to the aims for which we are striving; it gives expression to the thoughts of the inmates and lets the people of the state know of our work and purposes. We want the state's citizens to understand our problems and to join with us in their solution.

## CHOUTEAU RELIEF-FUND WORK.

Unique among all plans for the amelioration of suffering caused by prison confinement is the method found here. In the source from which the funds are obtained, in the co-operation between the prisoner and citizen volunteer worker and in the administration of relief it is a pioneer. Since prisoner Chouteau made the first appeal for such a work and gave \$100 with which to start, and Warden Codding secured the approval of the Board of Directors, the work has gone steadily forward. There is no room here to tell all the story. The beginnings were small and the bottom of the barrel was scraped so hard at times that some got splinters in their fingers. But it grew. From donations by prisoners and others, from sales to visitors of articles made here, and sales to prisoners of such articles as they are allowed to have by the Board, the money has been raised. Our bank book shows that the committee appointed by you has deposited \$5221 since the account was opened. Of this, \$1633 has been paid out in relief to the needy families of inmates, or to prisoners on parole to tide them over emergencies. The balance has been paid for goods or is still on deposit. The demand grows as our experience widens. Sixty-one different families have been aided, and in nearly one-half these cases the husband or father has returned to support the needy ones. In many cases the help given has seemed to us pitifully small, but it has been a real lift and encouragement. Possibly in most of the cases more good has been done for the needy by finding for them friends in their own community who have been succorers to them in ways that the committee could not have managed. This brings me to another point worth noticing:

## THE STATE WELFARE BOARD.

I have not had the pleasure of engaging in this work; I only wish to emphasize the need of it. The relief committee finds that most of the cases called to its attention are so far away and information is so inadequate we can not be at all sure that they need help. It would be a great advantage were there a welfare board in each county seat, coöperating with a state board, to investigate and advise in the administration of such aid as we give.

## RECREATION AND AMUSEMENT AND HEALTH.

Christ healed the sick. Rehabilitation of men and women includes their being fitted to enter into industrial life. While this question would seem to belong naturally to the physician's field, it overlaps into the chaplain's purview. Open-air services are held every Sunday when it is possible, followed by a period of freedom in the yard-park before dinner. Moving-picture exhibitions, inspirational, instructive and entertaining, mirth-provoking if it is possible to procure films that are funny and at the same time clean, are regular parts of the proceedings calculated to build up the body and

renew the mind. The expense of these films also comes out of the meager \$2000 at the chaplain's command, but it pays.

At the request of the men and by authorization of the warden and deputy warden, the chaplain has acted as chairman of the committee on athletics for the prison, on which four prisoners are the other members. During the summer months outdoor games are encouraged. Every prisoner, except the miners, have a half-hour recreation period for five days in the week. The miners have an hour and a half every Saturday afternoon. Baseball is the favorite pastime; basket ball and horseshoe-pitching is also played. The women, too, have their periods and their games. During the months when outdoor recreation is impossible the men now have the privilege of a gymnasium, fitted up in a room formerly used by furniture makers under the contract system (now happily abolished). Apparatus was bought or made in the prison shops, and much enjoyment and exercise was the result.

Most of the inmates prove to be interested spectators rather than active participants in the games. This gives them mental rest, and in so far is good; but it does not give them all they need for physical improvement. I would suggest that a system of setting-up exercises, similar to those used in military training, might be introduced for the benefit of those who do not take any recreative exercise.

#### APPRECIATION OF FAVORS.

In closing I wish to express my thanks to Almighty God for the blessing on the work; to the Board of Penal Institutions, and to the warden and to all of my fellow officers, with whom my relations have been so pleasantly cordial; and to the inmates of the prison who have given me their confidence and in many cases their help in the work committed to my hands. Very respectfully submitted.

Yours very cordially,

THOMAS W. HOUSTON, *Chaplain.*

## REPORT OF PHYSICIAN.

*J. K. Coddington, Warden:*

SIR—The time has arrived when I have the pleasant duty of rendering you an account of the prison's medical department for the biennial period ending June 30, 1912. While this is my second report to you, it is the first where I have been in charge for the entire period covered by the report. We have had no serious epidemics during the period just closed, so our principal labors have been with those received in poor health, the injuries received in the mine, shops, etc., and our efforts to better the tuberculosis situation. We have treated at the morning sick call an average of 82 men per day; of these an average of 8 were excused from work. We have treated in the hospital 689 cases; this is for all causes. Of these 424 were for sickness, 100 for injuries and 165 for operations.

Of the 909 inmates in this institution, 288 reported in poor health when received; 48 were practically totally disabled, 416 have at some time had gonorrhea, 126 claim to have had syphilis, and of the latter number 25 per cent showed evidences of the disease being active. Since syphilis is a most damaging and persistent as well as infectious blood disease, it requires constant care and expensive treatment to keep it confined to those who were infected before their arrival at this institution. There have been a large number of injuries, but fortunately not many were serious. One man was killed outright by a fall of slate in the mine, this being the only fatality. Most of the injuries, and the most serious ones, come from the mine.

The general health of the inmates of this institution is undoubtedly good. This is best shown by the results of the test made by Doctors Alexander and Crumbine, May 26, 1912, when 40 men from the different departments were examined and weighed, and showed an average gain of 6.8 pounds per man. Of these men there were 11 who had been here more than four years, and their average gain was 9.5 pounds. The lowest gain per man was in those who had been here the shortest time.

Our quarters, which charity permits us to call a hospital, are extremely inadequate. The medical department of a prison with upwards of 900 inmates is no small part of that institution, and it should be well equipped. A man in a prison, if sick, injured or in need of surgical attention, is entitled to scientific treatment in a hospital sufficiently equipped to give him the best chance for recovery. The present makeshift quarters are so poorly adapted to our needs that we have about reached the place where a hospital is imperative. Excepting our operating room, we have practically nothing. If the medical department of this institution is expected to advance it must have better equipment. A general hospital of three stories, the two lower floors for general use, and the upper floor arranged for the open-air treatment of tuberculosis, would in my judgment be an ideal arrangement for an institution of this kind. A new general hospital would relieve the crowded condition of the insane building. We are now compelled to use some of the rooms in this building for the injured and surgical cases. We have 30 insane housed in this building, every available room being in use. These rooms are 10 feet 8 inches by 8 feet six inches, and we are forced to put two or three patients in each room. In addition to this, we have six of those on the insane count confined in the prison cell house.

The insane building is badly in need of a system of forced ventilation. The windows are small, and on one side the air is shut off by other buildings. In its present crowded condition it is a menace to the health of its occupants. There are upwards of 45 insane men in this institution, and as there seems to be no way of getting rid of these men when their sentences expire, the number of insane is going to increase rapidly. Of these men

the condition of 12 is such that they can perform simple, light tasks; so they have their regular cells in the prison cell house, and are not on the insane count until their maximum sentences expire. We have 13 insane admitted from the prison inmates during the biennial period 1911-'12; 5 men have been transferred here from other institutions, and 2 were committed under the criminal-insane act, which makes a total of 20 received. Three were transferred from here to the Topeka State Hospital, 3 were paroled, and 3 died, leaving a total gain of 11 for the biennial period. If this ratio of gain should continue I am at loss to know how we are to take care of them.

The sanitary condition of the cell houses is as good as the present arrangements will permit; but if the institution hopes to make its inmates strive for better things in life it will have to set a better example. Compelling a man, after a day's work, to go into one of the little cells now provided, and sleep on a bag of straw only half wide enough, and almost as unyielding as the floor, will certainly never do it.

The tuberculosis problem has not caused us any great anxiety during the two years covered in the report. We have had but one death from tuberculosis in this time, and that was one of our most hopeless insane patients, which made successful treatment of this individual out of the question. In addition to our own tubercular patients, the Hutchinson Reformatory has transferred to us twelve of its most advanced tubercular patients. Considering this handicap, I believe that the medical department has a right to be proud of this record. We have found tuberculin a great aid in the treatment of this class of cases. We have had twenty-five on this treatment, and it has proved a benefit in nearly every case where used. I attribute the decrease in the spread of tuberculosis largely to the isolating of suspected cases and daily recreation periods. The latter is undoubtedly of the greatest benefit to men with a tendency to tuberculosis.

TABLE 1. Showing diseases and number treated for each in the hospital during biennial period 1911-'12.

DISEASES.	No.	DISEASES.	No.
Abcess—gonorrheal, 1; from salivarian, 3; of ear, 2; palmar, 2; periosteal, 1; phlegmonous, 1; rectal, 1.....	12	Heart—acute dilation, 1; chronic dilation, 1; functional trouble, 3; valvular trouble, 6.....	11
Abcess, thyroglossal.....	1	Heat prostration.....	3

526 .....	White.....	48	Aug. 25, '11	Acute dilation of heart.
1662 .....	White.....	40	Dec. 7, '11	Cancer of liver.

Eight deaths occurred during the fiscal year ending June 30, 1911, and three deaths during the fiscal year ending June 30, 1912, making a total of 11 deaths for the biennial period.

The average numbers of patients confined daily in the hospital was 12.4, and the average number of days confined in the hospital was 9½.

The cost for drugs, surgical dressings, etc., has been 12.1 cents per capita for each month of this period.

The medical department has been shown every courtesy and given all possible aid by the prison management, for which I take this opportunity of thanking you. Respectfully yours.

SHERMAN L. AXFORD, *Prison Physician.*

## WOMEN'S WARD.

*J. K. Coddington, Warden:*

DEAR SIR—The number of women prisoners, their ages, nativity and other facts necessary to be shown in a report, are found in the report of the record clerk. The health and conduct of the women in this department have been above the average during the past two years. The substitution of Miss A. Danner for the man guard heretofore employed has been an improvement. I believe that three things have contributed to the improvement in this department:

*First.* The recreation given the women at stated periods, permitting them to get out of doors and relax from discipline.

*Second.* The outdoor work in garden and orchard, where from fifteen to twenty-five women each day have been at work hoeing in the garden, picking vegetables, apples and that class of work.

*Third.* The prison school and Bible teaching, which open up to the woman in the cell an opportunity to employ her mind upon better things.

Respectfully submitted.

ELIZABETH SIMPSON, *Matron.*

## COAL-MINE DEPARTMENT.

*Warden J. K. Coddington:*

DEAR SIR—I herewith submit a report of conditions in and around the coal-mine department. While there have been considerable improvements made during the past two years, it seems to me that the building of the new steel ventilating fan is by far the most important thing that has been done, as it will insure an abundance of pure, fresh air at the working face for an almost indefinite period in the future. The next thing in importance is the building of the new steel tippie and hoisting tower, and the removal of the old, oil-soaked wooden towers, that has been a menace to the lives of the prisoners for so many years. There are less men employed in the coal mines at this time than ever before. Notwithstanding this fact, there seems to have been more coal produced for the number of men employed than ever before, as the following report will show:

The total amount of coal mined during the years 1911 and 1912 is 135,081 tons, and the average number of men employed during the same period was 293 per day for the 618 days worked. The monthly output was 5,628.81 tons. By dividing this by the number of working days it will be seen that the men actually at the working face produced an average of 217.38 tons per day, making a grand total of 135,081 tons, or 3,377,187 bushels.

Respectfully,

A. FULTON, *Superintendent of Mines.*

## REPORT OF BRICK PLANT SUPERINTENDENT.

*J. K. Coddington, Warden Kansas State Penitentiary:*

DEAR WARDEN—The amount of brick made and sold and the various places to which it has been shipped is set forth in the report of the chief clerk. In addition to installing a system of tunnel and fan to utilize the waste heat from the kilns in the drying of brick, we have built one new kiln, extended and reroofed some buildings, and have assembled all of the sawmill machinery into one plant, under my direction. We have also built the new rock crusher, and it is being operated with steam from the brick-plant boilers. We contemplate putting in the coming year a machine for making tile drain and clay shingles. The plant, as a whole, is much improved over what it was two years ago.

Respectfully submitted.

J. P. DOBBS, *Superintendent of Brick Plant.*

## STATEMENT OF MAIL CLERK.

*J. K. Coddington, Warden:*

DEAR SIR—Herewith is a statement of mail sent and received for prisoners during the biennium from July 1, 1910, to June 30, 1912:

	<i>Sent.</i>	<i>Received.</i>	<i>Total.</i>
Letters.....	46,483	59,728	106,156
Money.....	\$4,869.42	\$3,943.08	\$8,812 50

There are many more letters for officers received and distributed through this office. Over 5000 mail and express packages have been received and inspected. Letters were received and sent in English, German, Spanish, French and Italian languages. Seven mails were received every day.

Very respectfully, CHARLES ERNST, *Mail Clerk.*

## TINKER SHOP REPORT.

*J. K. Coddington, Warden:*

SIR—I herewith submit biennial report of the tinker shop for the two years ending June 30, 1912:

**TINKER SHOP RECEIPTS AND EXPENDITURES FOR THE BIENNIAL PERIOD  
ENDING JUNE 30, 1912.**

RECEIPTS:	1911.	1912.	Total.
Cash sales.....	\$1,714.90	\$1,348.85	
Officer's tickets.....	205.90	112.25	
Administration building.....	100.60	15.00	
Tobacco manufactured for prison.....	6,997.90	6,520.85	
Brooms.....	321.00	392.70	
Total receipts.....	\$9,340.20	\$8,889.15	\$17,729.35
EXPENDITURES:			
Material and freight.....	\$1,239.31	\$1,406.78	
Tobacco and merchandise used.....	3,764.31	2,914.88	
Total expenditures.....	\$5,003.62	\$4,321.16	9,324.78
Balance.....	\$4,336.58	\$4,087.99	\$8,404.57

In 1911 the average number of men employed was 20; in 1912 the average number was 18.

Respectfully submitted.

E. E. SMITH, *Superintendent.*

## BOARD OF MANAGERS' REPORT.

*To His Excellency W. R. Stubbs, Governor of Kansas:*

DEAR SIR—The Board of Penal Institutions, successor to the Board of Managers of the Kansas State Industrial Reformatory, submits herewith for your information and consideration the Ninth Biennial Report of the institution, covering the period from July 1, 1910, to June 30, 1912.

This report includes the report of the superintendent which, in turn, embodies the reports to him from the heads of the several departments of the institution, and to them we respectfully direct your attention.

### CHANGE IN THE BOARD.

During the first year of the period covered by this report, R. J. Hopkins, who had been elected lieutenant governor of the state, resigned his position as a member of the Board and was succeeded by A. W. Logan, who served during the months of April, May and June, 1911. The Board of Managers, consisting of Messrs. Phillip Kelley, Thos. W. Morgan and A. W. Logan, was on July 1, 1911, succeeded by the new Board of Penal Institutions, which had been created by the legislature of 1911 to manage and control the Reformatory and State Penitentiary. This Board, appointed by your excellency for terms of one, two and three years, respectively, consists of Joseph H. Hazen, E. E. Mullaney and Thos. W. Morgan.

### THE SUPERINTENDENT.

M. F. Amrine has been superintendent of the institution during twenty-two months of the biennium, having succeeded the Rev. Chas. A. Richard on September 1, 1910. Mr. Richard resigned as superintendent in order to resume his chosen life work as a minister of the gospel. During his connection with the Reformatory, first as chaplain and afterwards as superintendent, Mr. Richard served the institution with intelligence, loyalty and zeal.

Superintendent Amrine, during his term of office has carried forward the work of improvement begun by his predecessors and has also introduced many new features originated by himself. A number of these features are specifically enumerated in his report. In this connection we desire to thank Superintendent Amrine for the courtesy he has shown to the members of the Board in the course of our business relations, and for the promptness and cheerfulness with which

he has carried into effect the Board's orders and recommendations. We also wish to thank all of the subordinate officers for the zeal and interest they have shown in the fulfillment of their official duties

#### IMPROVEMENTS IN PLANT.

For a number of years improvements in the physical plant of the Reformatory have been steadily in progress, until to-day the equipment is one of the best to be found anywhere in the United States. There are, however, still a few improvements that should be made at once and for which special appropriations will be necessary. Cell house No. 3 is now practically completed, with the exception of the roof. It should at once be roofed in permanent style in harmony with the remainder of the institution, at a cost to be determined on the recommendation of the state architect.

The wooden barn within the walls should be replaced by a stone and metal building of adequate size for the needs of the institution, thus following the idea of having all buildings on the grounds fire proof in their construction.

#### CONSOLIDATED APPROPRIATIONS.

The appropriations made for the Reformatory by the 1911 legislature were distributed into twenty-six different funds. Without presuming to criticise those who make our laws, the Board feels that the segregation of the different funds works a great hardship upon the institution and its officers. It is impossible to forecast accurately two years in advance the amount of money that will be needed for the twenty-six different purposes enumerated in our last appropriation bill. The result is that while some funds are "long" others are "short," and the Board is forced to turn back into the state treasury funds from certain items of appropriation, while in other items it does not have the resources necessary to carry on the work of the institution. A blanket appropriation covering exactly the same amount of money, and to be used for any form of maintenance, is infinitely better than one divided into numerous funds which by being not accurately balanced to the needs of the institution as they develop, proves a handicap to successful administration.

#### FUNDS SHOULD BE REAPPROPRIATED.

Another desirable feature of the appropriation bill for the coming biennium would be a section reappropriating for the use of the Reformatory all sums arising from the sale of such products of the farm, manual training school, etc., as are not needed for consumption in the institution. This is a matter of vital importance.

In conclusion, the Board desires to express its thanks to

*Ninth Biennial Report.*

your excellency for the interest you have shown in the welfare of the Reformatory, its officers and inmates. Your lively appreciation of the problems to be solved has been a source of constant inspiration to members of the Board, to the superintendent and to the subordinate officers.

Respectfully submitted.

THOS. W. MORGAN,

E. E. MULLANEY,

JOSEPH H. HAZEN,

*Members of the Board of Penal Institutions.*

## REPORT OF SUPERINTENDENT.

HUTCHINSON, KAN., July 1, 1912.

*To the Honorable Board of Penal Institutions of the State of Kansas:*

GENTLEMEN—I herewith submit my report as superintendent of the Kansas State Reformatory, and with it reports of heads of departments, for the biennial period beginning July 1, 1910, and ending June 30, 1912. Although the reports of departments cover the entire biennium, my report covers but twenty-two months, this being the length of time I have been superintendent. From the standpoint of material development I think the institution has just completed two good years. In this period the following material, permanent improvements have been completed without special appropriations:

Store room and storage cellar .....	\$10,200
Molasses factory and cane mill .....	800
Chicken brooder .....	450
Four poultry houses and pens .....	850
Fire-hose building .....	200
Retaining wall .....	150
Oil reservoir .....	700
Stable .....	700
Cave cellar for farmers' residence .....	100
Cattle shed .....	400

**\$14,550**

These improvements represent a total of \$14,550, and were constructed with inmate labor, the building stone being the accumulated product of the stone-cutting detail, one of the regular trade departments of the institution.

The following permanent improvements have been accomplished without special appropriation in the engineer's department:

Fire hose for outside and inside protection, emergency fire extinguishers, hose, reels, and nozzels .....	\$625.00
Flame arc lamps on enclosing walls and buildings .....	570.00
Irrigation plant, including twenty-five horsepower traction engine, centrifugal pump, suction and discharge pipe, and truck for the pump .....	2,400.00
Overhauling, repairing and replacing the heating system of the institution .....	2,600.00
Heating plant for the chicken brooder .....	100.00
<b>Total .....</b>	<b>\$6,295.00</b>

These permanent improvements, \$6,295, do not include any estimate for the labor used. This construction work, as well as all other construction work of the institution, is accomplished with inmate labor under the direction of officers regularly engaged as heads of the several departments. The total of permanent improvements established without special appropriation in the past two years is \$20,845. This estimate of improvements did not include five blocks of macadam road, some of it consisting of a grade eight feet high, connecting the north entrance of the Reformatory grounds with Avenue A in the city of Hutchinson. A total of 2435 loads of spawl rock and pulverized stone, being the refuse of the stone-cutting yard for several years, was used in this road.

I wish also to report the installation of a complete Bertillon and fingerprint identification and record department, which the institution has long needed.

## *Ninth Biennial Report.*

The last legislature appropriated \$4000 for a cold storage at this institution. I have to report that we constructed the cold storage of stone, laid in Portland cement, 62 x 27 feet, consisting of five separate rooms. State Architect Chandler has expressed the opinion that no state institution in Kansas has a similar equipment so efficient or in the same class with ours.

I have also to report that we have erected, and connected with three new wells, a water-treating plant with the \$2000 given us by the last legislature for this purpose. The guaranteed capacity of this plant is 2000 gallons per hour. Our boilers are supplied with this water. Our laundry and kitchen are also connected with it. We find the soft water materially reduces the expense bill for soap chips and washing powder and other materials necessary in using hard water, which constitutes the supply in this section of the state.

The special appropriation of \$2000 given us by the last legislature for recovering the administration building proved adequate, with a few dollars to spare.

I wish also to call your attention to the general improvement of the institution yard. Working along the line of the original plans, we have graded from the buildings in all directions to the enclosing wall. This work is not yet complete, but is nearly so.

### IRRIGATION.

Our experiments in irrigation are proving successful. In the season of 1911 we irrigated twenty acres of potatoes, two cuttings of a fourteen-acre field of alfalfa, ten acres of garden and five acres of corn. In the season of 1912 we are irrigating twenty-five acres of potatoes, three cuttings of a fourteen-acre alfalfa field, one cutting of a twelve-acre alfalfa field, and ten acres of corn. This work has been largely experimental with us in the construction of ditches as well as in the distribution of water. Our experience in two seasons indicates irrigation can be made a success under the conditions obtaining in this district. Our equipment is a twenty-five horsepower traction engine and an eight-inch centrifugal pump. Supplemented by the average rainfall of this part of the state, this plant seems to be sufficient for at least 150 acres. We hope to ditch properly and distribute water on this number of acres next year. Next season, also, we plan to experiment with irrigation in a five-acre field of wheat and in a five-acre field of oats.

### POPULATION AND HEALTH.

We have had but three deaths in the institution in the biennium—one by suicide, in January, 1911; one from typhoid fever, in May, 1912; and one from tuberculosis, in June, 1912. The case of typhoid fever was not contracted within the institution. We have had no epidemics of any sort in the past two years. The general health of our inmates is and has been unusually good. I wish at this point to commend Doctor Foltz, our institution physician, for the kind and generous attitude he has shown in performing difficult operations free of charge upon the young men in our care. His work has been a factor in helping us to turn out men, as we hope, not only better mentally and morally, but in much better physical condition than we received them.

Except for the situation of the tubercular inmate, we have nothing in the line of sanitary conditions to which we call special attention or in which we wish to make recommendation at this time. We feel that no one can be in touch with an institution of this sort very long before realizing the state is not doing as well as it might with tubercular subjects. The state should not compel the housing and close association of well and hearty young men with those who have tuberculosis, some of them in advanced stages. I wish to call your attention, and through you the attention of the governor and the legislature, to the need of relief from these conditions.

For six to eight years the population of the State Reformatory has

ranged from 325 in summer to 375 in winter. This range in number was varied in the past biennium by reaching 396 in December, 1911, and holding an average of 380 for the one month. Exactly 500 new men were received in this biennium, the first serial number of the two years being 2866 and the last serial number of the biennium is 2866. The ratio of white inmates to colored inmates seem uniform at 75 per cent white and 25 per cent colored. The Mexican population of this institution is increasing. In the early part of this year we had fourteen inmates of Mexican birth. Two years ago we had but six.

#### RECREATION.

One of the most effective disciplinary features of the institution work is the Saturday afternoon yard privilege, commenced as a weekly recreation period two years ago. In favorable weather the entire inmate population is at liberty within the enclosing wall, with the officers present. This privilege is not open to any who do not keep well within the rules of discipline of the institution. In unfavorable weather, particularly in the winter season, our recreation is taken in the institution gymnasium, equipment for which was given in a special appropriation by the legislature of 1909, but which because of the lack of a suitable room was not placed nor unpacked till the fall of 1911. Opportunity for a reasonable amount of athletic engagements and privileges materially reduces the number of reports for bad conduct. The gymnasium equipment is installed in a room 50 x 70 feet, formerly used as a carpenter shop, the latter having been moved to the manual training building in the fall of 1910. The greater part of the gymnasium work was under the direction of one of our regular school teachers, a graduate of the Kansas State Normal, who took these young men in charge for this purpose in addition to his regular hours of school work in the class room.

#### IMPROVEMENTS.

The third cell house, which has been under construction for some time, should be completed within the next two years. Our institution is but twenty years old; it is comparatively new and modern. I know of no special improvements or additions which will constitute urgent needs during the next two years.

#### SALARIES.

All our lower salaried officers are underpaid. The efficiency of an institution of this sort is the efficiency of its officers. I have made inquiry of similar institutions in other states. I find the scale of salaries higher in nearly all of the other institutions, and have found none lower. Our schedule of salaries has had very little increase in the past ten years. The increased cost of living makes this an inequitable proposition. In this connection I wish to call attention to the fact that our officers draw no sustenance from the state. I think this situation is the correct one, but the salaries should be high enough to allow for this fact. We have had thirteen voluntary resignations from the official force in twenty-two months. In addition to the fact that a changing official force decreases the efficiency of our work, a low schedule of salaries also means we lack opportunity to select the more desirable men for the vacancies. In this connection I wish to express my deep appreciation of the general spirit of loyalty shown me by the officers of this institution. Whatever success the institution may have accomplished in the past two years has been largely due to the uniform good spirit in which they have carried out what they believe to be the spirit of the management.

I wish also to thank your honorable body for many courtesies and the unusual way you have left me free in the management of the officers and the handling of the inmates of this institution. I have also appreciated very much the business ability of the Board as a whole, and the way they have strengthened and directed this very important part of the institution work.

Respectfully submitted.

M. F. AMRINE, Superintendent.

## REPORT OF ASSISTANT SUPERINTENDENT.

*M. F. Amrine, Superintendent:* I herewith submit my report showing the number of days' work delivered by the different details for the biennium beginning July 1, 1910, and ending June 30, 1912. E. M. DAVIS, Assistant Superintendent.

## REPORT OF FARM SUPERINTENDENT.

HUTCHINSON, KAN., July 1, 1912.

*Honorable M. F. Amrine, Superintendent:*

SIR—I herewith submit my report for the biennial period commencing July 1, 1910, and ending June 30, 1912. The farm has furnished the institution the following produce for the years 1910 and 1911:

	Amount.	Value.
Apples .....	bus. 878	\$478.00
Asparagus .....	lbs. 8	80
Beef .....	lbs. 31,589	2,510.47
Beets .....	bus. 41	20.50
Beans .....	bus. 9	9.00
Beans .....	qts. 48	4.80
Cabbage .....	lbs. 12,200	244.00
Cider .....	gals. 954	140.40
Cucumbers .....	bus. 1	1.00
Chickens .....	lbs. 814	85.08
Carrots .....	bus. 10	5.00
Green corn .....	doz. 224	24.40
Cobs .....	.....	17.72
Cherries .....	qts. 8,466	246.50
Eggs .....	doz. 1,518	804.00
Lettuce .....	lbs. 1,059	48.00
Milk .....	gals. 18,192	4,088.50
Molasses .....	gals. 4,609 $\frac{1}{2}$	2,304.75
Onions .....	bus. 412 $\frac{1}{2}$	328.10
Melons .....	No. 2,140	75.99
Onions, green .....	lbs. 380	33.00
Pork .....	lbs. 13,212	1,305.85
Potatoes .....	bus. 520 $\frac{1}{2}$	390.36
Peas .....	bus. 8	9.78
Peaches .....	bus. 122 $\frac{1}{2}$	122.50
Potatoes, sweet .....	bus. 1,700	1,700.00
Pears .....	bus. 9	13.50
Pumpkins .....	No. 70	6.60
Parsnips .....	bus. 109	54.50
Rhubarb .....	lbs. 712	21.09
Radishes .....	bus. 91	91.00
Radish, horse .....	lbs. 110	4.40
Tomatoes .....	bus. 498 $\frac{1}{2}$	371.82
Turnips .....	bus. 44	9.75
Vinegar .....	gals. 225	36.00
Greens .....	lbs. 566	5.66
Total .....		\$15,157.07

There was sold from the farm during the year:

Cane seed .....	\$700.00
Hides .....	199.15
Wheat .....	600.00
	1,499.15

Crops raised and fed on the farm:

Alfalfa hay .....	tons. 200	\$2,000.00
Prairie hay .....	tons. 100	1,000.00
Corn .....	bus. 5,500	2,450.00
Corn fodder .....	shocks. 8,865	968.25
Beets .....	tons 102 $\frac{1}{2}$	512.50
Cane hay .....	tons 80	400.00
Turnips .....	tons 10	50.00
Pumpkins .....	tons 40	200.00
Total .....		7,578.75

Total proceeds of farm .....	\$24,284.97
Maintenance and apparatus .....	5,345.14
Total credit to farm .....	\$18,889.83

At the end of the year the farm inventory is as follows:

Cattle .....	265	\$8,000.00
Horses .....	10	1,200.00
Mules .....	25	3,800.00
Hogs .....	140	1,500.00
Chickens .....	600	240.00
Total live stock.....		\$17,740.00
Farming utensils .....		5,500.00
Total farm inventory .....		\$20,000.00

The farm has furnished the institution through the storeroom, the following amounts for the year, commencing July 1, 1911, and ending June 30, 1912:

	Amount.	Value.
Apples .....	bus. 462	\$356.20
Beef .....	lbs. 56,945	3,868.20
Beets .....	bus. 25	12.50
Beans .....	bus. 46	46.00
Cabbage .....	lbs. 6,053	217.14
Cucumbers .....	bus. 5	10.00
Chickens .....	lbs. 962	80.50
Cherries .....	qts. 796	79.60
Cider .....	gals. 217	\$2.65
Carrots .....	bus. 19	9.50
Corn .....	doz. 813	81.00
Eggs .....	doz. 1,415	283.05
Lettuce .....	lbs. 1,277	25.54
Milk .....	gals. 22,220	4,141.20
Melons .....	No. 1,899	169.45
Molasses .....	gals. 2,954	1,470.00
Onions .....	bus. 622	933.60
Onions, green .....	doz. 506	25.30
Potatoes .....	bus. 539½	566.50
Potatoes, sweet .....	bus. 571	677.00
Peas .....	bus. 17½	17.50
Pumpkins .....	bus. 180	13.00
Parsnips .....	bus. 96¾	49.72
Pork .....	lbs. 21,430	2,143.00
Radishes .....	bus. 76¾	76.25
Rhubarb .....	lbs. 469	14.00
Radish, horse .....	lbs. 230	9.20
Greens .....	lbs. 415	4.15
Turnips .....	lbs. 46	11.50
Tomatoes .....	bus. 109¾	109.50
Total .....		\$15,541.04

There was sold from the farm during the year:

Cane seed .....	\$1,012.00
Hides .....	627.62
Wheat .....	1,267.30
Total .....	\$2,906.92

There was raised and fed on the farm:

Corn .....	bus. 5,000	\$3,000.00
Alfalfa hay .....	tons 190	2,289.00
Corn fodder .....	shocks 3,150	786.00
Beets .....	tons 60	300.00
Carrots .....	tons 40	160.00
Turnips .....	tons 20	100.00
Total .....		6,626.00

Total proceeds of farm .....	\$25,073.06
Maintenance and apparatus .....	17,049.98

Total credit to farm .....

\$8,023.98

At the close of the year the farm inventory is as follows:

Cattle .....	239	\$7,170.00
Horses .....	12	1,500.00
Mules .....	27	4,000.00
Hogs .....	160	1,700.00
Chickens .....	1,000	400.00
Total live stock .....		<u>\$14,770.00</u>
Farm inventory .....		<u>6,000.00</u>
Total .....		\$20,770.00

Respectfully submitted.

D. W. LARKIN,

*Superintendent of Farm.*

## STOREKEEPER'S REPORT.

HUTCHINSON, KAN., July 27, 1912.

*Mr. M. F. Amrine, Superintendent:*

## BOARD OF MANAGERS' REPORT.

FORT DODGE, KAN., July 1, 1912.

*To W. R. Stubbs, Governor:*

SIR—The Board of Managers of the Kansas State Soldiers' Home herewith submit their annual report, together with the reports of the commandant, quartermaster, adjutant and surgeon, and the report of the Mother Bickerdyke Annex, for the fiscal year ending June 30, 1912, containing a complete summary of receipts and expenditures of the institution, giving population, nativity, length of service, cost of maintenance, etc.

We wish to especially call your attention to the report and recommendations of our worthy commandant, A. M. Breese. We verily believe that the coming legislature should make appropriations to the different funds for the amounts he has recommended, and we particularly indorse the reasons given and set out by him for the making of such appropriations.

Respectfully submitted.

ANSEL R. CLARK, *President.*

FRANK STRAIN, *Secretary.*

D. M. BENDER, *Treasurer.*

## COMMANDANT'S REPORT.

FORT DODGE, KAN., July 1, 1912.

*To the Board of Managers of the Kansas State Soldiers' Home:*

I herewith submit my annual report, together with the reports of the quartermaster, adjutant and surgeon of the Home, for the year ending June 30, 1912.

### IMPROVEMENTS.

The appropriation for the years ending June 30, 1912, and June 30, 1913, was only \$5000, barely enough to keep up repairs, hence there has been no new buildings erected during the year.

### RELIGIOUS SERVICES.

Church and Sabbath school are held every Sabbath morning and church every Sabbath evening, and prayer meetings every Thursday evening, conducted by Rev. J. W. Crouch, resident chaplain.

### HOME SCHOOLS.

The Home schools, under the superintendence of Miss Edith Osburn, assisted by Miss Bessie M. Dixon, Miss Blanche Riney and Miss Mary E. Dillenbeck (the latter as manual-training teacher), have been conducted very satisfactorily.

### FARM PRODUCTS.

There were slaughtered, "for home use," 3 cows, producing 1650½ pounds of beef, and 90 hogs, producing 15,274 pounds of pork. The farm produced 40 tons of prairie hay and about 200 tons of alfalfa. We also raised 20 acres of Kafir corn, which was good, and 20 acres of cane.

We have on hand now 16 horses, 92 head of stock hogs, 45 pigs, 8 sows, 1 boar, 51 milch cows, 5 heifers and 7 calves.

Average number maintained during the year, 591; cost per capita, \$194.15.

Received from sale of 28 calves .....	\$79.80
Received from sale of 1 bull. ....	35.00
Received from sale of 3 beef hides .....	18 55
Received rebates on freight. ....	3.37
<b>Total .....</b>	<b>\$136.71</b>

All of which was paid into the state treasury, and receipt for same on file.

We have raised the past year 7 calves, to be used as milch cows.

The following is my estimate of the amount necessary to be appropriated to maintain the Home for the years ending June 30, 1914, and June 30, 1915:

	1914.	1915.
Subsistence.....	\$63,500	\$63,500
Clothing.....	15,000	15,000
Freight, transportation and coal..	14,000	14,000
Library.....	150	150
Contingent fund.....	1,500	1,500
New buildings, additions, repairs and sidewalks.....	10,000	5,000
Furnishings.....	2,000	2,000
Teachers' salaries.....	2,000	2,000
Equipment, manual training.....	500	500
Extension of waterworks.....	1,000	1,000
Sewerage, electric light and heating.....	1,000	1,000
Ice plant.....	500	500
Laundry.....	800	800
Repairing public road to Dodge City.....	500	500

*Salaries.*

Commandant.....	\$1,200	\$1,200
Quartermaster.....	1,000	1,000
Assistant Quartermaster.....	600	600
Surgeon.....	1,200	1,200
Assistant surgeon.....	900	900
Adjutant.....	600	600
Chaplain.....	750	750
Nurses.....	5,000	5,000
Engineer and electrician.....	1,200	1,200
First assistant engineer.....	900	900
Second assistant engineer.....	600	600
Undertaker and furniture man.....	600	600
Stenographer.....	480	480
Baker.....	900	900
Cook.....	720	720
Farmer.....	360	360
Gardener.....	360	360
Matron.....	360	360
Plumber.....	480	480

We had for the fiscal year ending 1912 and 1913, appropriated by the last legislature, \$5000 for new buildings, additions, repairs and sidewalks. We have constructed no new buildings, and found by the most rigid economy in that fund we did not have sufficient to keep up the needed repairs. All other funds have been sufficient. In my opinion we do not need any additional buildings, excepting an addition to the hospital, or another hospital. Both of our hospitals are full to their utmost capacity at the present time, and several who are not in the hospital ought to be there, but are not there from the fact that we have not room. If the sick are cared for as they should be we must have additional room in the hospital. My estimate of \$10,000 for the first year for new buildings, additions, repairs and sidewalks, and \$5000 for the second year, is low and reasonable, and we should have the full amount of the estimate in order to care for the sick as they should be cared for.

We should have \$5000 each year for employing nurses, in order to care for the sick as they should be cared for. We have not exceeded the appro-

priation of \$3000 for nurses for the past year from the fact that a great deal of the nursing has been paid for by contributions from the different orders in the Home. This should not be necessary, as the people of Kansas are ready and willing to care for the sick and afflicted.

I call for an appropriation of \$360 for a matron. In my opinion the Home has always needed a matron. As the members of the Home grow older and more feeble the necessity for a matron is more urgent.

Very respectfully submitted,

A. M. BREESE, *Commandant*.

## QUARTERMASTER'S REPORT.

FORT DODGE, KAN., July 15, 1912.

A. M. Breese, Commandant:

SIR—I herewith transmit my report of the transactions in the quartermaster's department for the year ending June 30, 1912.

JOHN W. SIDLOW, *Quartermaster.*

## REPORT OF BICKERDYKE HOME.

ELLSWORTH, KAN., July 15, 1912.

*To the Honorable Board of Managers:*

GENTLEMEN—I herewith submit the report of the Mother Bickerdyke Home for the year ending June 30, 1912.

Heretofore religious service has been held at the barracks and hospital, and for the year last past by the pastor of the M. E. Church at Ellsworth. A chapel has just been finished, central between the hospital and barracks, at a cost of \$872.56. Sunday services are well attended, and the pastors of the Methodist Episcopal, Baptist, and Presbyterian churches at Ellsworth, each take their turn in holding services here. A new gasoline engine has been put in at the wells, at a cost of \$101.80. Some few repairs have been made at the barracks, hospital, and some of the cottages, all of which are now in good repair. We still have the old farm wagons, surrey and spring wagon, and some farm tools that have given service here since the Home started. The live stock consists of 4 head of horses, 9 cows, 1 herd animal, 3 calves, 55 hogs and pigs, and 150 hens. There are about 60 acres of good wheat now in stack and 6 acres of medium-grade oats in shock. Two cuttings of alfalfa has been put in the barn. It was a very light crop. We had a fair garden, also have a small patch of potatoes and 20 acres of corn, looking fine. We exchanged two cows (\$55), four calves (\$12), three hogs (\$65.17)—total, \$132.17—for flour and feed; sold three calves for \$7, and old engine at the wells for \$30—total, \$37—in cash, for which I have treasurer's receipt. During the year 6 have died, 24 were discharged, 34 admitted, and 85 are now in the Home.

## APPROPRIATIONS AND EXPENDITURES FOR THE YEAR ENDING JUNE 30, 1912.

FUNDS.	Appropriations.	Expended.	Balance.
Subsistence.....	\$10,000.00	\$9,596.11	\$408.89

## LETTER OF TRANSMITTAL.

---

OFFICE OF THE TAX COMMISSION,  
STATEHOUSE, TOPEKA, October 16, 1912.

*Hon. W. R. Stubbs, Governor:*

SIR—As required by the statute, the Tax Commission presents herewith its report containing the official proceedings of the Commission for the biennial period extending from October 16, 1910, to October 16, 1912. The proceedings for each of the years, October 16, 1910, to October 16, 1911, and October 16, 1911, to October 16, 1912, are presented separately.

By direction of the Printing Committee, the report is abridged considerably when compared with preceding reports. Not near all of the official acts of the Commission are included. If all of the proceedings for the two years were contained in the report the volume would be much larger. Only such matter has been presented as seemed indispensable to the proper information of the public concerning the work of the Commission and of the state boards of which the members of the Commission are *ex officio* members.

In accordance with law, another report will shortly be made by the Commission to the legislature, it being the requirement of the law that the Commission shall report to the legislature at the opening of the legislative session. All discussion as to the operation of the present law of assessment and taxation and as to needed amendments to the law is reserved for the report to the legislature. Very respectfully,

SAM'L T. HOWE,  
B. F. MILTON,  
J. A. BURNETTE,  
*Commissioners.*

*Report*  
**OF THE TAX COMMISSION FOR THE YEAR COM-  
MENCING OCTOBER 16, 1910, AND END-  
ING OCTOBER 16, 1911.**

(5)

## *Proceedings*

*HAD BY THE TAX COMMISSION BETWEEN OCTOBER 15, 1910,  
AND OCTOBER 16, 1911.*

---

Proceedings had by the Tax Commission in regular session at its office in the statehouse, in Topeka, on July 1, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

The term of service of Mr. S. C. Crummer, as a member of the Tax Commission, having expired on June 30, 1911, and the Hon. J. A. Burnette having been appointed as the successor of Mr. Crummer, and having duly qualified as a member of the Tax Commission by filing a bond and taking the oath of office, and Commissioner Sam'l T. Howe, having been reappointed for another term, and having duly qualified, the Commission being thus newly constituted, Commissioner Milton moved that the roll be called for the election of chairman, having first placed in nomination for such position Commissioner Howe, and upon roll-call Commissioners Milton and Burnette voted for the election of Mr. Howe as chairman, and he was thereupon declared duly elected as such chairman.

And thereupon Mr. Clarence Smith was unanimously elected Secretary of the Commission.

And thereupon Mr. Roy Van Orman was unanimously elected as clerk and stenographer of the Commission.

## *Proceedings*

**HAD BY THE TAX COMMISSION ACTING AS THE STATE  
BOARD OF RAILROAD ASSESSORS, BETWEEN  
OCTOBER 15, 1910, AND OCTOBER 16, 1911.**

---

Proceedings had by the State Board of Railroad Assessors at its office in the statehouse, in Topeka, on March 20, 1911. Present: Sam'l T. Howe, S. C. Crummer, B. F. Milton.

### **CONVENING OF BOARD.**

Now on this 20th day of March, 1911, the Tax Commission, all the members being present, convenes as the State Board of Railroad Assessors, for the purpose of assessing for the year 1911 the property of the railroad companies within the state of Kansas and the property of all other public-service corporations, the assessment of which is by the statute made the duty of the Board.

---

Proceedings had by the State Board of Railroad Assessors at its office in the statehouse, in Topeka, on May 20, 1911. Present: Sam'l T. Howe, S. C. Crummer, B. F. Milton.

Now on this 20th day of May, 1911, the State Board of Railroad Assessors, all the members being present, after having given due consideration to all matters having relation to a proper valuation and assessment for the purposes of taxation of the several railroad properties within the state of Kansas for the year 1911, does hereby fix the assessment of the said several railroad properties as follows, to wit: (For assessed values of railroad property, see table No. 1.

---

Proceedings had by the State Board of Railroad Assessors in regular session at its office in the statehouse, in Topeka, on August 24, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

Now, on this 24th day of August, 1911, the State Board of Railroad Assessors, having, after due investigation and care-

ful consideration, determined the assessment values to be placed upon the property of the several car companies, joint-stock companies, mercantile and other corporations, and of partnership firms, and individuals owning passenger, sleeping, parlor, observation, dining and freight cars, or either, used in connection with the transportation of passengers or freight within, into or through the state of Kansas, excepting herefrom railroad companies operating a line of railroad, does hereby order the extension of assessed values against the said several companies as hereinafter stated; and,

It having been made to appear to the said Board, after due investigation and a careful compiling of data, that the average rate of levy for all purposes in the several taxing districts of the state for the year 1910 is .00890812, the Board does hereby further order that taxes be and hereby are charged against the said several assessed values, as hereinbefore ordered, equal to the product of the said average levy and the said several assessed values, respectively.

The assessed valuations against the said several companies and the taxes charged against each respectively, as herein ordered, are as follows: (See table No. 14.).

## *Proceedings*

**HAD BY THE TAX COMMISSION ACTING AS THE STATE  
BOARD OF APPRAISERS, BETWEEN OCTOBER 15, 1910,  
AND OCTOBER 16, 1911.**

---

Proceedings had by the State Board of Appraisers at its office in the statehouse in regular session, on this the 10th day of April, 1911. Present: Sam'l T. Howe, S. C. Crummer, B. F. Milton.

### CONVENING OF BOARD.

Now on this 10th day of April, 1911, the Tax Commission, all the members being present, convenes as the State Board of Appraisers, as by the statute provided, and proceeds to the assessment of the property of the telegraph, telephone and pipe-line companies situated within the state of Kansas, and it is resolved that the Board shall remain in continuous session from day to day until the assessment of all the property of the telegraph, telephone and pipe-line companies within the state shall have been finished.

---

Proceedings had by the State Board of Appraisers at its office in the statehouse in regular session, on this the 20th day of May, 1911. Present: Sam'l T. Howe, S. C. Crummer, B. F. Milton.

Pursuant to the provisions of subdivision 15, section 9347, chapter 116, General Statutes 1909, the Tax Commission, acting as the State Board of Appraisers, does hereby assess the property of the telephone companies in Kansas, hereinafter named.

The amount of assessment is placed opposite the names of the respective companies. (For assessed values see table No. 5.

Gas and pipe line companies assessed as of May 25, 1911 see table No. 7.

Telegraph companies assessed as of May 26, 1911 see table No. 3.

## Proceedings

HAD BY THE TAX COMMISSION ACTING AS THE STATE  
BOARD OF EQUALIZATION, BETWEEN OCTOBER 15,  
1910, AND OCTOBER 16, 1911.

Proceedings had by the State Board of Equalization in regular session at its office in the statehouse, in Topeka, on July 12, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

The Tax Commission, all the members thereof being present, convenes this day as the State Board of Equalization, and thereafter the following proceedings were had:

ORDERED, That the Board remain in continuous session from day to day until its work of the state equalization of the assessment of property shall have been finished.

### APPEAL No. 1.

W. H. Webster, Appellant,

*vs.*

The County Board of Equalization of Washington County, Kansas, Appellee.

It appearing from the evidence introduced by the parties to this appeal that the question presented does not relate to the equalization of the assessment of the property in question, but goes to the legality of such assessment: It is therefore considered and

ORDERED, That the State Board of Equalization is without jurisdiction to determine the said question, and that therefore the appeal should be and the same is hereby dismissed.

### APPEAL No. 3.

Abbie E. Mossman *et al.*, Appellants,

*vs.*

The County Board of Equalization of Sedgwick County, Kansas, Appellee.

Now on this 12th day of July, 1911, this appeal comes on for decision, having been heard on July 7, 1911, the appellants being then represented by Abbie E. Mossman, and the appellee not appearing.

After duly and carefully considering all the evidence, it is considered that the petition of the appeal should be granted in part, and the conclusions of the State Board as to what should be and remain as the

equalized assessment of all of the property involved in the appeal are as shown in the statement following:

Description of lots, all in Mossman's and Mossman's 2d add., or adjoining.	Assessed value per lot.	Value per lot as here equalized.	Aggregate equalized value hereby fixed.	Deduction from values as equalized by the county board.
Lots 6 to 22, Central ave. (9 in number), Mossman's 2d add.	\$270	\$250	\$2,250	\$150
Lots 9 to 31 (12 in number), Abbie ave., Mossman's 2d add.	180	150	1,800	360
Lots 33 to 33 (26 in number), Abbie ave., Mossman's 2d add.	160	120	3,120	1,040
Lots 19 to 32 and 13 to 21 and 25 and 27 (19 in number), Mabel ave., Mossman's 2d add.	180	150	2,850	570
Lot 23, Mabel ave., Mossman's 2d add.	280	280	280	
Lots 20 to 24, 18 to 17, 21 and 23, 29 and 31, 28 to 32 (14 in all), Alice ave., Mossman's 2d add.	180	150	2,100	420
Lot 26, Alice ave., Mossman's 2d add.	1,880	1,880	1,880	
Lots 34 to 45, 74 to 84, 83 and 85, 41 to 47, 63 to 73 (30 in all), Alice ave., Mossman's 2d add.	160	120	3,600	1,200
Lots 75 to 83 (5 in all), Alice ave., Mossman's 2d add.	135	90	450	225
Lots 34 to 40, 46 to 84, 33 to 33 (50 in all), Mabel ave., Mossman's 2d add.	160	120	6,000	2,000
Lot 34 to 68 (18 in all), Mona ave., Mossman's 2d add.	160	120	2,160	720
Lots 70 to 90 (6 in all), Mona ave., Mossman's 2d add.	135	90	540	270
Lots 34 to 62 (15 in all), Stites ave., Mossman's 2d add.	160	120	1,800	600
Lots 64 to 72 (5 in all), Stites ave., Mossman's 2d add.	135	90	450	225
Reserve "A," Abbie ave.	486	486	486	
Tract containing 8.9 acres lying between Mossman's add. and Mossman's 2d add.	2,700	2,700	2,700	
East 175 feet of Reserve "C," Mossman's add.	680	500	500	180
Reserve "A," Mossman's add.	900	700	700	200
Reserve "B," Mossman's add.	1,680	880	880	220
Lots 11 to 47 (19 in number) on Irving ave., Mossman's add.	125	80	1,520	355
Lots 12 to 48 (19 in number), Grandview ave., Mossman's add.	115	70	1,330	355
<b>Totals.</b>			<b>\$37,396</b>	<b>\$10,050</b>

The total assessment of all of the above-described lots as fixed and equalized by appellee was \$47,446. The total equalized value as herein fixed and ordered is \$37,396. The deduction as made hereby from the equalized value of the appellee is \$10,050.

The secretary will transmit to the county clerk of the county of Sedgwick a certified copy of this finding, in order that the county clerk of said county of Sedgwick may place upon the tax roll values against the lots as above described as is indicated by the values herein fixed and equalized against the said lots.

#### APPEAL No. 4.

L. A. Golden, Appellant,  
vs.

The County Board of Equalization of Smith County, Kansas, Appellee.

Appellant appeared by I. M. Mahin, attorney.

Appellee appeared by W. E. Ross, county assessor.

This is an appeal on the part of L. A. Golden from the action of the

Board of Equalization of Smith county in refusing to strike from the tax rolls of that county a certain real estate contract set out and described in the appeal, the appellant claiming that said contract was and is not assessable under the law. This presents to this Board a purely legal question. Sitting, as this Board is, as a Board of Equalization, it can only hear and determine questions of unequal assessment. It has no power to determine what is and what is not assessable under the law. If the property of the appellant has been improperly placed upon the tax roll of Smith county by the deputy assessor, his remedy is in the courts and not before this Board. As has been repeatedly held by it, neither the Tax Commission nor the State Board of Equalization has any jurisdiction of the question involved: it is therefore

ORDERED, That the said application be and the same is denied.

#### APPEAL No. 5.

L. A. Golden, Appellant,

*vs.*

The County Board of Equalization of Smith County, Kansas, Appellee.

Appellant appeared by I. M. Mahin, attorney.

Appellee appeared by W. E. Ross, county assessor.

It appearing from the evidence introduced by the parties to this appeal that the question presented does not relate to the equalization of the assessment of the contract in question, but goes to the legality of such assessment: it is therefore considered and

ORDERED, That the State Board of Equalization is without jurisdiction to determine the said question, and that therefore the appeal should be and the same is hereby dismissed.

#### APPEAL No. 6.

Uhl & Uhl, Appellants,

*vs.*

The County Board of Equalization of Smith County, Kansas, Appellee.

Appellant appeared by L. C. Uhl, attorney.

Appellee appeared by W. E. Ross, county assessor.

Now on this day this matter comes on for determination, the evidence having been heretofore introduced. This is an appeal from the Board of Equalization of Smith county from the action of said Board in equalizing the assessment theretofore made by the deputy assessor on a set of abstract books owned by the appellants. It appears from the evidence that the books were assessed at \$5000, but on a hearing before the County Board of Equalization this amount was reduced to \$4000, and from that order an appeal was taken to this Board.

After carefully considering all the evidence and consulting the authorities, the Board finds:

*First*, That the set of abstract books in question were and are assessable as personal property, and

*Second*, That the amount as equalized (\$4000) by the Board of Equalization of Smith county is not excessive.

As supporting this view see the cases of The Leon Loan & Abstract

Company *vs.* Equalization Board, 86 Iowa, 127; Booth & Hanford Abstract Company *vs.* Phelps, Treasurer, 8 Wash. 564. It is therefore

ORDERED, By the Board that said application be and the same is hereby denied.

#### APPEAL No. 7.

Alexander H. Kerr, Appellant,

*vs.*

The County Board of Equalization of Wilson County, Kansas, Appellee.

Appellant appeared by F. T. Cheetham, attorney.

Appellee appeared by W. H. Bray, county assessor.

This is an appeal from the action of the Board of Equalization of Wilson county. The appellant claims that its real estate has been assessed at an excessive figure and that its personal property assessment should be lowered. Under and by virtue of a stipulation filed with this Board by the appellant and the county assessor of Wilson county, the real-estate assessment is equalized and reduced from \$50,000, as returned by the assessor, to \$35,000.

There being no evidence before the Board showing that the assessment of \$27,000 on the personal property of the appellant was or is excessive, the appeal as to the personal property is dismissed. It is therefore

ORDERED, That the appeal as to the real estate be and the same is sustained and the assessment of the same is equalized and fixed at \$35,000. And it is further

ORDERED, That said appeal so far as it affects the personal property of appellant be and the same is hereby dismissed.

#### APPEAL No. 8.

Mennonite Charite, Appellant,

*vs.*

The County Board of Equalization of Harvey County, Kansas, Appellee.

At the time set for the hearing neither party appeared, and the appeal coming on for consideration upon the evidence furnished by the files of the case, it appears from the said evidence that instead of an appeal from any action of the County Board of Equalization, there is presented a petition to the State Board of Equalization to order stricken from the tax roll of said county of Harvey the property owned by the "Mennonite Charite," a corporation organized under the laws of Kansas, said property being described as lots 9, 10 and 11, block 18, city of Halstead, Kan., for the reason that the said corporation is organized for charitable purposes and as such its property should be exempted from taxation.

The question raised relates only to the legality of the assessment and taxation of the property of the aforesaid corporation, and has nothing to do with the equalization of the assessment of property. The State Board of Equalization has no jurisdiction to determine legal questions, its power being confined to the equalization of assessments, and the

Board has therefore no power to grant the petition of the said corporation and the proceeding must be and hereby is dismissed without granting the relief asked.

APPEAL No. 9.

The Smith Center Lumber Company, Appellant,

*vs.*

The County Board of Equalization of the County of Smith, Appellee.

In this appeal it is shown by the evidence that the property of the appellant, which consisted of a stock of lumber in Smith Center, Kan., was listed by appellant in the sum of \$11,145, at which figure it was assessed by the deputy assessor;

That the County Board of Equalization, at its regular session as such Board, in its equalization made at that time of all the property of the county of Smith, increased the assessment of the said personal property to the extent of ten per cent of the assessed value and fixed the equalized value in the sum of \$12,260.

The conclusion of the State Board is that there has been no evidence showing that the action of appellee was wrongful or in any way unjust to the appellant, and that said equalized assessment as fixed by appellee should be and remain undisturbed. It is therefore

ORDERED, That the said appeal be and hereby is dismissed and the relief asked in said appeal denied.

APPEAL No. 10.

Lebanon Lumber Company, Appellant,

*vs.*

The County Board of Equalization of Smith County, Kansas, Appellee.

Appellant appeared by L. C. Uhl, attorney.

Appellee appeared by W. E. Ross, county assessor.

Now on the above-named date the parties appeared and presented their evidence. Upon considering the evidence before it, the State Board of Equalization finds that such evidence does not make out a case for appellant and does not warrant and authorize a change in the assessment of appellant's property as equalized by the Board of Equalization of Smith county. It is therefore

ORDERED, That the application of the appellant for a reduction of the assessment be denied.

APPEAL No. 11.

International Harvester Company, Appellant,

*vs.*

The County Board of Equalization of Montgomery County, Kansas, Appellee.

This is an appeal from the action of the Board of Equalization of Montgomery county in refusing to equalize or lower the assessment of the property of the appellant, situated in the city of Coffeyville, in said county. After examining and duly considering the evidence submitted,

the State Board of Equalization finds that the property in question was brought into the state after the 1st day of March and is assessable under section 9233, General Statutes of Kansas, 1911, and as no evidence has been presented showing that the assessment as made by the deputy assessor and as equalized by the Board of Equalization of Montgomery county is excessive, it is ordered that the appeal be and the same is dismissed.

## APPEAL No. 13.

S. T. Kindley, Appellant,

*vs.*

The County Board of Equalization of Osborne County, Kansas, Appellee.

Appellant appeared in person.

Appellee appeared by John Doane, county clerk.

Appeal from the refusal of the Board of Equalization of Osborne county, to reduce appellant's personal-property assessment upon certain stallions and a jack. Both parties to the appeal having introduced their evidence, and the same having been duly considered by the Board, it is found from all the evidence that as to the stallion called "Colonel Carter," taking into account the price paid by appellant for the animal in December, 1910, and its defective condition, it should be valued and assessed at \$400; and that considering all the facts as to the stallion called "Budweiser," it should be valued and assessed at \$200; and that no other changes should be made in appellant's personal-property assessment as equalized by the County Board of Equalization. It is therefore

ORDERED, That the personal-property assessment of appellant for the year 1911 be reduced in the sum of \$500.

## APPEAL No. 19.

*In the matter of the application of The Jewell County Telephone Company for a reduction of the assessed valuation placed upon the property of said Company by the State Board of Appraisers for the year 1911.*

Now on this 12th day of July, 1911, the day fixed for the hearing of the application of the above-named company for a reduction in its assessment as fixed by the State Board of Appraisers, comes J. W. Berry, president of the company, and is heard by the State Board of Equalization upon all matters presented to sustain the application of the said company; and thereafter, the question having been very carefully considered, it is by the Board determined that the value as originally fixed by the State Board of Appraisers is not excessive and that the said assessment as was made should remain undisturbed.

The application of the said company is therefore denied.

Proceedings had by the State Board of Equalization in regular session at its office in the statehouse, in Topeka, on July 13, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

*In the matter of the application of the Formosa Mutual Telephone Company for a reduction in the assessed valuation of the property of said Company, as fixed by the State Board of Appraisers for the year 1911.*

At the hearing this day had, L. H. Appleby, secretary of the above-named company, showed by his testimony that the returns of the company as made for assessment purposes for the year 1911 gave the State Board erroneous information, upon which information the assessment by the State Board was made, and after duly considering facts newly submitted, it is concluded that the assessment of said property, as fixed by the State Board in the sum of \$10,503, was excessive to the extent of \$1995.57, and it is herein determined that the assessed value of the property of said company should be and hereby is fixed and equalized in the sum of \$8507.43.

The county clerks of the counties of Jewell and Republic are hereby directed to reduce by 19 per cent the proportionate amounts of the total original assessment of the property in the sum of \$10,503, as assigned to the several taxing districts and heretofore certified by the secretary of this Board, in order that the value assigned to each taxing district may be reduced proportionately.

The secretary will transmit a certified copy of this order to the said county clerks.

Proceedings had by the State Board of Equalization in regular session at its office in the statehouse, in Topeka, on July 14, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

#### APPEAL No. 12.

Rodney H. Yale *et al.*, Appellants,

*vs.*

The County Board of Equalization of Gray County, Kansas, Appellee.

Now on this 14th day of July, 1911, this appeal comes on to be heard, and neither party is represented at the hearing, and the appeal is therefore to be considered on the information contained in the affidavits and other papers filed in the proceeding.

It appears from the evidence that there are two tracts of land involved, the equalized assessment of which as fixed by the appellee is complained of, said tracts of land being respectively described as follows:

Tract No. 1: Lots 2, 3, 4, 5 and the S.  $\frac{1}{2}$  of section 29, township 25 S., of range 29 W., in the county of Gray, containing 463.50 acres.

Tract No. 2: Lots 2 and 3 and the S. W.  $\frac{1}{4}$  of the N. E.  $\frac{1}{4}$  and all of the N. W.  $\frac{1}{4}$  and the S.  $\frac{1}{2}$  of section 33, township 25 S., of range 29 W., in said Gray county, containing 571.50 acres.

Tract No. 1 was equalized by the appellee in the sum of \$11,500, and tract No. 2 in the sum of \$11,300.

The testimony contained in the affidavits submitted on the part of the appellant shows an excessive equalized assessment, and that the value for taxing purposes as fixed is in excess of the actual value of the property on the first day of March, 1910; that appellant made application to appellee to have the value of said real estate reduced to its actual value on the first day of March, 1910, said application having been made under the statute for such case made and provided, which application was denied by the appellee.

No testimony is offered by the taxing authorities of the county to sustain the action of the appellee, and after considering all of the evidence furnished as aforesaid, it is considered that said equalized assessment of the said tracts of real estate as above set forth respectively is excessive, and it is hereby

ORDERED, That the said equalized assessment be reduced as follows:

That tract No. 1 be reduced from \$11,500 to \$6952, the reduction being \$4548.

That tract No. 2 be reduced from \$11,300 to \$8572, the reduction being \$2728.

The county clerk is directed to place upon the assessment and tax rolls of said county, as the equalized assessment of the said real estate, amounts as follows: Against tract No. 1, \$6952; against tract No. 2, \$8572.

The secretary will transmit certified copies of this order to the county clerk of the said county of Gray, and to the appellants.

Proceedings had by the State Board of Equalization in regular session at its office in the statehouse, in Topeka, on July 15, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

*In the matter of the application of the Humboldt Telephone Company for a reduction in the assessed value of the property of said Company as fixed by the State Board of Appraisers for the year 1911.*

It now appearing to the State Board of Equalization that the original return for assessment purposes as made by the aforesaid company was erroneous and a proper showing having been made by an amended return to the effect that the assessment of the property of said company, as based upon the said original and erroneous return, was excessive and should be reduced in order to equalize the assessment of said property with the assessment of other classes of property, it is upon the evidence submitted considered that the assessed value of the property of said company, as originally fixed by the State Board of Appraisers in the sum of \$19,445 should be reduced by an amount equaling 35 per cent of the said amount, that is to say, in the sum of \$6805.75, leaving the assessment of said property as now fixed and equalized to be and remain at the sum of \$12,639.25, and it is so ordered.

The secretary will transmit a certified copy of this order to the

county clerk of the county of Allen in order that he may reduce the values heretofore assigned to the taxing districts in which the property of said company is situated by an amount equaling 35 per cent of the values so assigned and certified.

Proceedings had by the State Board of Equalization in regular session at its office in the statehouse, in Topeka, on July 17, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

APPEAL No. 14.

M. E. Britton, by Wiley Britton, Agent, Appellant,  
*vs.*

The County Board of Equalization of Wyandotte County, Kansas,  
Appellee.

Appellant appeared in person.

Appellee appeared by J. L. Shore, county assessor; T. Lyon, county commissioner; and L. B. Holcomb, deputy clerk; C. W. Scheller, deputy assessor.

This is an appeal from the Board of Equalization of Wyandotte county, on the part of M. E. Britton, from an order of said Board equalizing the assessment on the following-described real estate, situated in the city of Kansas City, Kan., to wit:

Tract 20 B, commencing 28 poles S. of the N. E. corner of section 16, township 11, range 25; thence S. 4 poles; thence W. 10 poles; thence N. 4 poles; thence E. 10 poles to place of beginning. Also, lots 3 and 4 in block 3, Reynold's Grand View Park addition to Kansas City, Kan.

The first-named tract had been assessed by the deputy assessor at \$5400, and Grand View Park tract at \$3000, but on a hearing before the Board of Equalization the assessment on the first-named tract was reduced to \$5200. From this order M. E. Britton appeals to this Board.

After hearing the evidence of the appellant and of the taxing officers of Wyandotte county, the Commission is of the opinion that said assessment, as equalized, is just and should not be disturbed by this Board. It is therefore

ORDERED, That the said appeal of M. E. Britton be and the same is hereby dismissed.

The secretary will transmit a certified copy of this order to the said county clerk.

Proceedings had by the State Board of Equalization in regular session at its office in the statehouse, in Topeka, on July 18, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

*In the matter of the application of the Nickerson Telephone Company for a reduction in the assessment of the property of said Company for the year 1911 as fixed and made by the State Board of Appraisers.*

Now on this 18th day of July, 1911, appears Mr. C. S. Gibbens, on the part of the company, and makes his showing to sustain the application

of the said company that the valuation of the property of said company as fixed by the State Board of Appraisers is excessive and should be reduced.

And after hearing all matters presented by Mr. Gibbens in support of said application, it is determined that the said assessment was not excessive and should be and remain fixed as originally made in the sum of \$17,071; and accordingly it is

ORDERED, That the relief prayed for be denied.

The secretary will transmit a certified copy of the order to said company.

Proceedings had by the State Board of Equalization in regular session at its office in the statehouse, in Topeka, on July 29, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

#### APPEAL No. 2.

The Atchison & Eastern Bridge Company, Appellant,

*vs.*

The County Board of Equalization of Atchison County, Appellee.

Now on this 29th day of July, 1911, this matter comes on for determination by the State Board of Equalization, the evidence and argument of said appeal having been heard by said Board of Equalization on the 14th of July, 1911.

It appears from the evidence that the Atchison & Eastern Bridge Company owns and operates a bridge across the Missouri river at Atchison, Kan., and that said company returned its property for the year 1911 to the deputy assessor at Atchison, valued at \$341,000. The deputy assessor of the city of Atchison increased this valuation from \$341,000 to \$700,000 for the year 1911. The bridge company appeared before the Board of Equalization of Atchison county and requested that said assessment be reduced from \$700,000 to \$341,000 as returned by it to the deputy assessor. The Board of Equalization of Atchison county refused said application and equalized and fixed the assessment of said bridge company's property at \$700,000, and from this action on the part of the Board of Equalization of Atchison county the bridge company appealed.

The contention of the appellant is that the valuation of its property should be equalized by the State Board of Equalization at \$341,000, as returned by it to the deputy assessor of the city of Atchison.

There is also a contention between the appellant and the appellee as to the true boundary line between the states of Kansas and Missouri where the bridge in question crosses the Missouri river. The appellant strenuously insists that the boundary line between the said states is the center of the main channel of the Missouri river, and that said channel now flows, and has for over thirty years, under the east end of the draw-span of said bridge, which is about one-third of the length of the said bridge from the Kansas shore; while, on the other hand, the authorities of Atchison county with equal vehemence insist that the main channel

of said river flows near the Missouri shore, or about two-thirds of the length of the bridge from the Kansas shore, that two-thirds of the bridge structure is in the state of Kansas and should be assessed in the state of Kansas.

The appellant produced before the Board affidavits of a large number of residents of East Atchison, Mo., and of Atchison, Kan., tending to prove that the main channel of the Missouri river is now and always has been near the west shore of said river, or under the east end of the draw-span of said bridge; while, on the other hand, the appellee produced practically an equal number of affidavits of the citizens of Atchison, Kan., tending to prove that the main channel of the said river, and hence the boundary line between the two states, is under the east end of said bridge, or about two-thirds of the length of said bridge from the Kansas side.

It is also in evidence before the Board that in February, 1908, the Secretary of War of the United States, after a public hearing as to the rectifying of the conditions of the channel of the river at said bridge, directed the bridge company to either maintain the channel under the present draw-span by dredging, or to provide passage way under the east portion of the bridge by an additional draw-span. Later a survey of the river at Atchison was made by an engineer of the United States army, and the report of the survey was made under date of January 17, 1910, recommending that dikes be built to aid in providing a deeper channel and straightening the channel for flood waters and in navigation of said river above and through the bridge. February 4, 1910, the Board of Engineers on Rivers and Harbors substantially approved the aforesaid report and concurred in the recommendations thereof; that the expense of the necessary work should be shared by the owners of the bridge; and further recommended that if the other interests should be unwilling to furnish one-half of the estimated cost of the work, steps should be taken to have the bridge altered so as to provide for safe navigation through it.

But it also appears that nothing further has been done, and that the government of the United States has not insisted upon any alteration of the bridge or any additional draw-spans to be made.

From all this testimony presented by the parties to this action, the Board is unable to determine the exact location of the main channel of said river, fixing the boundary line between the two states of Kansas and Missouri, as it appears that said channel has been unstable and changing for several years last past.

It further appears from the evidence that the fair and reasonable value of the property of appellant, including its bridge, its approaches and the franchises of the said company, is \$1,200,000. It also appears from the evidence that the authorities of the state of Missouri have assessed that portion of the bridge lying in the state of Missouri at a valuation approximating \$450,000, which leaves the total value of the property to be assessed in Kansas of the sum of \$750,000, or \$50,000 more than the equalized assessment fixed by the authorities of Atchison county.

For the purpose of more accurately determining the matter at issue, if possible, the Board visited the city of Atchison and examined the bridge

and its surroundings, but on account of the high water little additional information was obtained.

After due consideration of all the evidence presented and of all the information that could be obtained by the Board, it is not shown to the satisfaction of the Board that the assessment of appellant's property is excessive. The taxing authorities of Atchison county are on the ground and are presumed to be familiar with conditions there more than this Board, and unless the appellant has shown by a fair preponderance of the evidence that the authorities of Atchison county have unjustly assessed the property of appellant, the State Board of Equalization should not interfere. Having failed to so satisfy the Board, it is

ORDERED, That the relief prayed for be denied, and that the assessment of the property of appellant as equalized and fixed by the Board of Equalization of Atchison county be and the same is sustained.

The secretary will transmit certified copies of this order to the county clerk of said county of Atchison and to all interested parties.

Now, on this 29th day of July, 1911, the State Board of Equalization, having had under consideration the equalization of the assessment of the property of the state, and having modified, according to orders heretofore made and recorded, values as returned by county clerks, does now hereby order further as follows:

That an increase of 10 per cent be made in the assessed values of all city real estate in the county of Wichita as returned by the county clerk.

The equalization of the assessment of all property in the state having been completed in accordance with the orders heretofore made, the equalized values for the counties, respectively, are found to be as they appear in the statement following; and it is hereby further

ORDERED, That upon each dollar of the total equalized value, as shown in said statement, there be and hereby is levied a tax of one and one-fifth mills, which levy is hereby made the lawful levy for state tax purposes for the tax year 1911. The taxes so ordered and levied also appear in the statement following, as charged against the counties respectively:

#### STATEMENT OF EQUALIZED ASSESSMENT VALUES AND OF STATE TAXES.

This order is made with the reservation to the Board of the power to make such changes as may become necessary to correct errors which may be discovered in the returns heretofore made by the county clerks to the Tax Commission, or such other changes as may seem to be expedient for the making of a fair and equitable equalization among the counties of the state and among the taxpayers of any particular taxing district.

The secretary will certify to the county clerks of the state the amount of the equalized value and of the state tax charged for each county respectively, and in his certificates will show all

the changes that have been made by the State Board of Equalization in the values as returned by the county clerks.

The secretary will also transmit to the auditor of state and the treasurer of state a certified copy of this order.

Proceedings had by the State Board of Equalization in regular session at its office in the statehouse, in Topeka, on August 7, 1911. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

APPEAL No. 21.

I. D. Young, Appellant,  
*vs.*

The County Board of Equalization of Mitchell County, Kansas, Appellee.

Now on this 7th day of August, 1911, this matter comes on to be heard, neither party appearing in person or by attorney.

This purports to be an appeal from the action of the Board of Equalization of Mitchell county in refusing to strike from the tax roll of the said county a certain real-estate contract which the deputy assessor of the city of Beloit, Mitchell county, had added to the personal assessment statement of the appellant after the personal property statement had been furnished to said deputy assessor by said appellant.

This is not a question of equalization, but is a question of the taxability of the property in question, and over matters of this kind we are of the opinion that the State Board of Equalization has no jurisdiction. The remedy of the appellant is in the courts and not before this Board. It is therefore

ORDERED, On this 7th day of August, 1911, that the relief prayed for be and the same is denied, and said proceeding is dismissed.

*Report*  
**OF THE TAX COMMISSION FOR THE YEAR COM-  
MENCING OCTOBER 16, 1911, AND END-  
ING OCTOBER 16, 1912.**

(93,

# *Proceedings*

*HAD BY THE TAX COMMISSION BETWEEN OCTOBER 15, 1911,  
AND OCTOBER 16, 1912.*

---

Proceedings had by the Tax Commission, in regular session, at its office in the statehouse, in Topeka, on May 15, 1912. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

Pursuant to the provisions of subdivision 15 of section 9347, chapter 116, General Statutes 1909, the Tax Commission does hereby assess the properties of the several street and inter-urban railway companies in the state of Kansas at the values as shown by the following statements.

The assessed valuation of each company so made has been apportioned among the taxing districts wherein the property is located, as indicated on the returns of the said companies.

The secretary is hereby directed to certify to the county clerks of the state the values so apportioned, in order that the same may be entered upon the tax rolls of their respective counties. (See Table No. 9.)

## *Proceedings*

**HAD BY THE TAX COMMISSION, ACTING AS THE STATE  
BOARD OF RAILROAD ASSESSORS, BETWEEN OCTO-  
BER 15, 1911, AND OCTOBER 16, 1912.**

---

Proceedings had by the State Board of Railroad Assessors at its office in the statehouse, in Topeka, on March 20, 1912. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

Now, on this 20th day of March, 1912, the Tax Commission, all the members being present, convenes as the State Board of Railroad Assessors for the purpose of assessing for the year 1912 the property of the railroad companies within the state of Kansas and the property of all other public service corporations, the assessment of which is by the statute made the duty of the Board; and it is

ORDERED, That the Board be in session from day to day without formal adjournment until it shall have finished all its work of assessment.

---

Proceedings had by the State Board of Railroad Assessors at its office in the statehouse, in Topeka, on May 20, 1912. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

Now, on this 20th day of May, 1912, the State Board of Railroad Assessors, all the members being present, after having given due consideration to all matters having relation to a proper valuation and assessment for the purposes of taxation of the several railroad properties within the state of Kansas for the year 1912, does hereby fix the assessment of the said several railroad properties as follows, to wit: (See Table No. 1.)

---

Proceedings had by the State Board of Railroad Assessors, in regular session, at its office in the statehouse, in Topeka, on October 7, 1912. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

Now, on this 7th day of October, 1912, the State Board of

Railroad Assessors, having, after due investigation and careful consideration, determined the assessment values to be placed upon the property of the several car companies, joint-stock companies, mercantile and other corporations, and of partnership firms and individuals owning passenger, sleeping, parlor, observation, dining and freight cars, or either, used in connection with the transportation of passengers or freight within, into or through the state of Kansas, excepting herefrom railroad companies operating a line of railroad, does hereby order the extension of assessed values against the said several companies as hereinafter stated; and

It having been made to appear to the said Board, after due investigation and a careful compiling of data, that the average rate of levy for all purposes in the several taxing districts of the state for the year 1911 is .00998812, the Board does hereby further order that taxes be and hereby are charged against the said several assessed values as hereinbefore ordered equal to the product of the said average levy and the said several assessed values respectively. The assessed valuations against the said several companies and the taxes charged against each respectively, as herein ordered, are as follows: (See Table No. 14.)

The secretary will transmit to each company whose property is so assessed and against whom taxes are charged, as hereinbefore stated, the amount of the assessed valuation, together with the rate of levy and the amount of the tax, and will also transmit to the auditor of state and to the treasurer of state a certified copy of this order.

## *Proceedings*

**HAD BY THE TAX COMMISSION, ACTING AS THE STATE  
BOARD OF APPRAISERS, BETWEEN OCTO-  
BER 15, 1911, AND OCTOBER 16, 1912.**

---

Proceedings had by the State Board of Appraisers at its office in the statehouse, in regular session, on this the 8th day of April, 1912. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

### **CONVENING OF BOARD.**

Now, on this 8th day of April, 1912, the Tax Commission, all the members being present, convenes as the State Board of Appraisers as by the statute provided, and proceeds to the assessment of the property of the telegraph, telephone and pipe-line companies situated within the state of Kansas, and it is resolved that the Board shall remain in continuous session from day to day until the assessment of all the property of the telegraph, telephone and pipe-line companies within the state shall have been finished.

---

Proceedings had by the State Board of Appraisers at its office in the statehouse, in regular session, on this the 10th day of May, 1912. Present: Sam'l. T. Howe, B. F. Milton, J. A. Burnette.

Pursuant to the provisions of subdivision 15, section 9347, chapter 116, General Statutes 1909, the Tax Commission, acting as the State Board of Appraisers, does hereby assess the property of the telephone companies in Kansas, herein-after named. The amount of assessment is placed opposite the names of the respective companies. (See Table No. 5.)

Gas and pipe-line companies assessed as of May 18, 1912. (See Table No. 7.)

Telegraph companies assessed as of May 28, 1912. (See Table No. 3.)

## Proceedings

HAD BY THE TAX COMMISSION, ACTING AS THE STATE  
BOARD OF EQUALIZATION, BETWEEN OCTOBER  
15, 1911, AND OCTOBER 16, 1912.

Proceedings had by the State Board of Equalization, in regular session, at its office in the statehouse, in Topeka, on July 10, 1912. Present: Sam'l. T. Howe, B. F. Milton, J. A. Burnette.

The Tax Commission, all the members thereof being present, convenes this day as the State Board of Equalization, and thereafter the following proceedings were had:

ORDERED, That the Board remain in continuous session from day to day until its work of the state equalization of the assessment of property shall have been finished

Proceedings had by the State Board of Equalization, in regular session, at its office in the statehouse, in Topeka, on July 30, 1912. Present: Sam'l T. Howe, B. F. Milton, J. A. Burnette.

*In the matter of the equalization of the assessment of all property in the state of Kansas for taxation purposes for the year 1912.*

Now on this 30th day of July, 1912, the State Board of Equalization, having completed its investigation of the assessment of the property of the state in relation to the relative values among the counties of the state, does hereby direct and order that changes be made in the assessed values of certain counties of the state as follows:

	Per cent increase.	Per cent decrease.

This order is made with the reservation to this Board of the power to make such changes as may become necessary to correct errors which may be discovered in the returns made by the county clerks to the Tax Commission, or such other

changes as may to the Board seem to be expedient for the making of a fair and equitable equalization among the counties of the state and among the taxpayers of any particular taxing district.

The secretary is hereby directed to transmit to the counties respectively the usual certificate showing the equalized assessment value and the tax charged against any such county.

OFFICE OF THE  
PUBLIC UTILITIES COMMISSION,

TOPEKA, December 20, 1912.

*Hon. W. R. Stubbs, Governor:*

DEAR SIR—We have the honor to submit herewith our first report, covering the fiscal years 1911 and 1912.

Respectfully,

GEO. PLUMB,  
FRANK J. RYAN,  
JOHN T. WHITE,  
*Commissioners.*

Attest:

W. G. GRICE.

## Jurisdiction of Public Utilities Commission.

The Railroad Commission had power and authority to regulate the steam railroads, the express and sleeping car companies and inter-county electric lines.

The Public Utilities law confers such power upon this Commission, and in addition, jurisdiction over all telegraph and telephone companies, pipe-line companies, street railways, dining-car companies, and water, light, heat and power companies, except municipally owned utilities, mutual telephone companies, and those public utilities and common carriers situated and operated wholly or principally within any city or principally operated for the benefit of such city or its people.

## Report of Public Utilities Commission.

---

The public utilities law, enacted by the legislature of 1911, became effective May 22, 1911. Provision was made that the Board of Railroad Commissioners should constitute the Public Utilities Commission, and the three railroad commissioners chosen at the regular election in 1910 should retain their respective offices for the terms for which they were elected and until their successors have been appointed and qualified. The commissioners elected in 1910 were George Plumb, of Emporia, Frank J. Ryan, of Leavenworth, and J. T. White, of Ada.

The Commission was organized on May 22, 1911, with George Plumb as chairman and E. H. Hogueland as secretary, they having served in the same capacity since the organization of the Railroad Commission on January 9, 1911.

W. G. Grice was appointed secretary on June 15, 1912, to succeed Mr. Hogueland, who had been promoted to the position of rate clerk.

The work of the office has been completely reorganized and modern methods of filing and keeping records adopted. Separate typewritten records of the proceedings of the Commission and the orders promulgated are kept, the loose-leaf system having been inaugurated; likewise complete card indices of all cases filed and orders issued are in use.

### RAILROAD COMMISSION.

The Railroad Commission was organized on January 9, 1911, with George Plumb as chairman and E. H. Hogueland as secretary.

During the period from January 9, 1911, to May 22, 1911, when the powers, duties, authority and jurisdiction of the Board of Railroad Commissioners were imposed upon the Public Utilities Commission, 71 cases, involving freight and passenger service, the establishment of agents, the failure to bulletin trains and complaints of similar character were filed and adjusted. Four applications for permission to issue securities were filed. The M. K. & T. Railway Company was given authority to issue \$17,131,000 of consolidated mortgage bonds. The same company also asked permission to issue additional securities. After hearing and investigation, certificate was granted authorizing the issuance of \$24,000,000 of bonds.

The Missouri & Kansas Interurban Railway Company was

given permission to issue \$300,000 of bonds, and the Wichita Terminal Company was authorized to issue \$100,000 of stock and \$2,500,000 of bonds for the purpose of building a union station and terminal facilities in the city of Wichita.

Upon the order of the Commission, the Kansas lines were required to make the minimum-weight rules on carload shipments of grain, hay and lumber conform with the interstate rules. The carriers were also required to reestablish the "return-goods rule," which had been canceled without the consent of the Commission.

#### CASES BEFORE THE PUBLIC UTILITIES COMMISSION.

There have been filed with the Commission in the period from May 22, 1911, to and including November 30, 1912, 400 cases involving the rates, services, facilities and securities of the common carriers and public utilities of the state. Of these cases 158 were complaints against railroad companies and 51 against telephone companies; 55 involved telephones in depots; 52 cases concerned security issues; 15 were applications for certificates of public convenience and necessity; 39 involved consolidations and sales; 5 complaints were against express companies, 5 against gas companies; 4 were appeals from ordinances enacted by cities, and the remaining 16 were of a miscellaneous character. In addition to these, 136 applications by carriers and 57 applications by the utilities to readjust rates, rules and regulations have been filed and considered by the Commission. Of the utility applications, 50 were filed by telephone companies, 6 by gas companies, and 1 by a telegraph company. Forty-three hearings have been held throughout the state and 281 in Topeka. Brief abstracts of the different proceedings appear in another part of this report.

#### STOCK AND BOND AUTHORIZATIONS.

During the past eighteen months the Commission has passed upon 52 applications filed by the common carriers and public utilities seeking authority to issue stock, bonds, notes and other securities; 22 of these were by telephone companies, 18 by railway companies, 9 by gas and electric companies, and 1 by a water company; 2 were withdrawn. The total stock issues authorized during that time amount to \$11,063,050; bonds, \$102,200,000; notes, \$22,971,800; total, \$136,234,850.

**PUBLIC CONVENIENCE AND NECESSITY APPLICATIONS.**

Under the provision of section 31 of chapter 238 of the Session Laws of 1911, no new public utility or common carrier can transact business in the state without the consent of the Public Utilities Commission. Fifteen applications under this section have been considered by the Commission, and certificates have been granted to 6 new railroad companies, 4 telephone companies, and 1 electric-light company. One telephone company has been denied the right to do business on account of a competing company serving the same community. Two electric-light companies have been denied the right to do business as public utilities. The first application was by F. E. Workman, of Parsons, Kan., and the second by the Citizens Electric Light Company, of Fort Scott. In each case an existing electric-light company was furnishing reasonably adequate service, and the only controversy was over the rates to be paid—a matter wholly within the control of the local and state authorities. The application of the Hutchinson Gas Company to do the business of a public utility in Hutchinson was withdrawn.

**CONSOLIDATIONS AND SALES AUTHORIZED.**

The law provides that no common carrier or public utility shall purchase or acquire any part of the stock, bonds or other forms of indebtedness of any competing company or assign any franchise or right thereunder without the consent of the Commission.

The Commission has considered and approved consolidations and sales of telephone companies in 32 different cases. It has also approved the sale of three gas and electric-light companies.

**UNIFORM SYSTEM OF ACCOUNTS FOR TELEPHONE COMPANIES.**

The public utilities law confers upon the Commission power and authority to regulate telephone companies. Investigation shows that there are about 600 telephone companies operating in the state. In addition to these are probably 1000 line companies that have no switchboard. It was found that a uniform system of accounting for the telephone companies was necessary to the proper regulation of such public utilities and the rendition of reports required by law. The Commission therefore adopted a uniform classification of accounts, which has been issued as a recommendation rather than as an order, to secure from the companies an intelligent report. The report form adopted by the Commission provides for eleven primary accounts, with a number of subdivisions. The companies have been divided into two classes. Class A consists of those companies whose total assets are \$50,000 or over; class B, those companies whose assets are less than \$50,000.

A great many companies have adopted the Commission's

system of accounts and are well pleased with it. The work has been greatly augmented by the hearty coöperation of the Independent Telephone Association, through its secretary, Mr. F. B. MacKinnon. While all of the telephone companies operating in the state have not adopted the uniform classification of accounts, it is hoped by the Commission that they will do so beginning with the year 1913. Unfortunately, very few of the companies have kept their records in a way that would reflect the actual operating conditions. The Commission has experienced considerable difficulty in obtaining complete reports from the different companies, due to the fact that no uniform accounting methods exist. The telephone companies must prepare to adopt a uniform classification.

The Interstate Commerce Commission, having recently acquired jurisdiction over the interstate telephone companies, has been working on a uniform classification of accounts. The present plan of that Commission is to classify the companies into four different classes. Class A companies are those companies whose average annual operating revenues exceed \$250,000; class B, those companies whose operating revenues exceed \$50,000 but not more than \$250,000 per year; class C, those companies whose operating revenues exceed \$5000 but not more than \$50,000, and class D, those companies whose operating revenues are \$5000 or less.

In all probability the Interstate Commerce Commission's classification of accounts will become effective January 1, 1913. It is the desire of this Commission to adopt the interstate classification if possible. The accounting year will probably correspond with the calendar year, and legislation will be necessary in Kansas to correct the reporting year to correspond with the federal requirement.

#### REPORTS.

The Commission has adopted the standad report forms prepared by the Interstate Commerce Commission for steam and electric railroads, express companies and sleeping-car companies. It has prepared detailed reports for the telephone and gas companies as well as the telegraph companies.

Four different forms of accident reports are required of the railway companies, the law making it their duty to report all accidents resulting in loss of human life or serious personal injury.

In addition to these the railway companies have been furnished with forms for reporting the monthly performance of passenger trains.

In order to assist the carriers and utilities in making application to secure permission to issue securities, detailed forms which follow the statutory requirements have been prepared. Likewise, a simple form has been printed to enable persons

having a grievance against a carrier or utility to make their complaint in an intelligent manner to the Commission.

#### NATURAL-GAS RATES.

Early in the year 1912 the pipe-line companies serving the various cities in Kansas with natural gas, in connection with the local distributing companies, attempted to advance the price of that commodity without the consent of the Public Utilities Commission. Section 20, chapter 238, of the Session Laws of 1911 provides that no change shall be made in any rate, toll, charge or classification or schedule of charges, or in any rule or regulation of any public utility or common carrier, without the consent of the Commission.

The Commission instructed its attorney to bring injunction proceedings to restrain the gas companies from making the contemplated advances. These cases were removed to the federal court, and thereupon Mr. Marshall, attorney for the Commission, and Mr. Dawson, attorney-general, brought proceedings in the name of the state against the gas companies for violation of the anti-trust law, it appearing that the pipeline companies had made exclusive contracts with the distributing companies for supplying gas to the various municipalities of the state. The anti-trust suits had the effect of bringing the gas companies under the control of the Commission, and the proposed advances were withdrawn and heavy fines paid by the Kansas Natural Gas Company in settlement of the anti-trust litigation. As a result the people of Kansas are to-day paying no higher rates for natural gas than they have paid for the past several years, although the supply is fast being depleted.

#### LEGAL DEPARTMENT.

John Marshall, who was attorney for the Railroad Commission, was appointed by the Public Utilities Commission, on May 22, 1911, to serve in a like capacity for a term of two years. Mr. Marshall has had charge of all the court cases and Interstate Commerce cases in connection with the rate department, and has appeared for complainants in various cases coming before the Commission. A more detailed statement of the work of this department will be found under the headings, "Cases Contested in Court" and "Rate Cases Before the Interstate Commerce Commission."

#### RATE DEPARTMENT.

E. E. Smythe, formerly general freight agent of the Kansas City Southern, and H. D. Driscoll were placed in charge of the rate department when the Commission was organized, and upon Mr. Smythe's resignation Mr. Hogueland was advanced to the position of rate clerk, and W. L. Monson was made

assistant rate clerk to succeed Mr. Driscoll, who was appointed commissioner of the Topeka Traffic Bureau.

This department, in connection with the legal department, has prepared hundreds of rate exhibits to be used in interstate rate cases and cases coming before this Commission. In addition to the general rate cases, several hundred dollars in claims due to overcharges and misrouting on the part of the carriers have been refunded to the Kansas shippers through the efforts of the department. The Commission has now pending before the Interstate Commerce Commission something like a dozen rate cases involving interstate rates into Kansas.

The department has recently worked out a differential basis for the movement of carload shipments of live stock, grain, coal, lumber, brick, sand, stone and salt over two lines of railway in the state of Kansas. The continuous mileage rates over the two lines, plus differentials ranging from 1 cent on coal to 3½ cents on sheep, are to be applied for the transportation of such shipments. The department has also prescribed modified milling-in-transit rules to govern shipments of grain and grain products moving between points in the state of Kansas. The new rules were necessary on account of the drastic action taken by the railroads as a result of the decision of the Interstate Commerce Commission, which would result in driving the interior mills of Kansas to the Missouri river and other rate-breaking points. The modified rules permit the interior millers to compete on a more equitable basis with their competitors who enjoy proportional or reshipping rates from the Missouri river.

A careful check is made of all tariffs filed by the carriers, and all advances in interstate rates that are against the best interests of the shippers of the state are called to the attention of the Interstate Commerce Commission, and usually suspended pending a hearing to show why the advances are necessary. In addition to the interstate cases, the question of a more equitable scale of intrastate express rates is now under consideration.

Under the heading "Rate Cases Before the Interstate Commerce Commission" will be found a review of the more important actions.

#### ENGINEERING DEPARTMENT.

Carl C. Witt was appointed engineer for the Public Utilities Commission on May 22, 1911, and with his assistants has been making an appraisal of the physical property of all the railways operating in this state, and has also valued two electric-light plants, one in Garden City and one in Parsons, and in addition has made inspection of the condition of tracks that were reported in bad condition, also investigations for proposed connecting tracks, and other work of an engineering nature.

The law for many years has made it the duty of the Railroad Commission to value the railways of the state, but this Commission is the first one to undertake the task.

The Commission has required the railway companies to submit complete inventories of their physical property as well as right-of-way plats, profiles, etc. The preparation of this data is being carried forward at present by all the companies, and several have practically completed the work. The Commission's engineers are checking the items and placing the values thereon.

In one year's time a complete valuation has been made of the property of the Union Pacific Railroad Company in Kansas and a great deal of work accomplished on the appraisal of the other lines. In another year practically all of the principal lines can be appraised.

A complete report of the work of the engineering department, setting forth in detail the methods pursued and results obtained, appears in another part of this report.

The cost to reproduce new the property of the Union Pacific Railroad Company in Kansas has been found to be \$44,120,492, or \$37,157 per mile of roadway, while the present physical value is \$32,604,952, or \$27,459 per mile of roadway.

If section No. 1, Kansas-Missouri state line to Topeka, which includes all the double track in this state and the extensive terminals and shops at Kansas City, Kan., is excluded from above totals, the total cost to reproduce new per mile of the remaining roadway will be \$31,104.95, and the present physical value per mile of roadway will be \$23,442.03.

Detailed statements showing the cost of the various branch lines as well as main lines are shown in the engineering department's report.

#### EXPENDITURES.

When the Railroad Commission was organized, on January 9, 1911, there was \$11,870.16 in the funds of the Commission, not taking into account that of the attorney. The expenditures up to May 22, 1911, were \$5654.55, and \$3369.09 from May 22, 1911, to June 30, 1911, under the Public Utilities Commission. The legislature of 1911 appropriated a total of \$54,200 for all departments of the Commission, including \$11,200 for the legal department, for the year ending with June 30, 1912, and a like amount for 1913. During the period from July 1, 1911, to and including November 30, 1912, or seventeen months, the Commission has expended for all branches of the work, including the valuation of the Kansas railroads, a total of \$44,905.77, and the attorney spent during the same time \$9,091.

## RECOMMENDATIONS.

*Jurisdiction.*

It is our opinion that section 3, chapter 238, of the Session Laws of 1911, should be amended to clearly define the jurisdiction of the Commission. We believe that all public utilities and common carriers should be placed under the control of the Public Utilities Commission. If this is not desirable, the Commission's jurisdiction should be more clearly defined. We are of the opinion that all telephone companies transmitting messages should be placed under the control of the State Commission; otherwise there will be no regulation of such companies.

*Discrimination.*

Section 12 of the act should be amended to provide that no public utility or common carrier shall charge, demand, collect or receive any greater or less compensation for any service that it may render than it charges, demands, collects or receives for a like and contemporaneous service under substantially similar circumstances and conditions. This section now provides that no greater or less compensation shall be charged for the same class of service than that specified in the printed schedules or classifications.

*Notice of Hearings.*

Section 15 of chapter 238 of the Session Laws of 1911 provides that thirty days' written or printed notice of all hearings or investigations before the Commission shall be given. This should be reduced to ten days or left entirely to the discretion of the Commission. On account of the great number of cases coming before the Commission and the frequent requests on the part of both the complainants and respondents for postponements, it is a serious handicap to the efficient administration of the affairs of the Commission to require thirty days' notice of all hearings. In a great many states this matter is left entirely to the Commission, or, when time limit is fixed, ten days is considered sufficient notice.

*Reporting Year.*

Both the railroad law and the public utilities law expressly provide that annual reports shall be rendered to the Commission on or before the 15th day of September for the year ending on the 30th day of June preceding. The interstate commerce act leaves this matter entirely in the hands of the Commission, and that tribunal is now seriously considering the advisability of changing the reporting year to end with the calendar year instead of with June 30. It is therefore very important that the Kansas law be amended to give the Commission power to make the year for state reports correspond

with the federal requirements. The Interstate Commerce Commission will probably require the telephone companies doing an interstate business to render a report for the year ending with December 31, while the Kansas law now requires a report from these utilities for the year ending with June 30, thus imposing an additional burden upon the state utilities.

*Regulation of Security Issues.*

The law regulating the issuance of securities confers upon the Commission only limited authority. It provides that the Commission may ascertain the truth or falsity of statements regarding the amount, character, purposes and terms on which such securities are to be issued. But it gives the Commission practically no discretionary power; such authority should be conferred upon the Commission. The Commission should also be given power and authority to require reports from the common carriers and public utilities, showing the disposition made of authorized securities and whether the funds realized therefrom have been applied to the proper purposes.

*Grounds for Appeal.*

Section 21 of chapter 238 of the Session Laws of 1911 authorizes an appeal from orders of the Commission on the ground that the same are unlawful or unreasonable, thereby permitting a rehearing on questions of fact. It is our judgment that the Commission's findings of fact should be final, as in the case of the decisions of the Interstate Commerce Commission.

*Physical Telephone Connections.*

There is considerable question whether the Commission has the power under the existing law to require two telephone companies to connect their lines and give joint service. Such power should be conferred upon the Commission in positive language.

*Division of Joint Rates.*

Considerable doubt exists whether the Commission has power to fix the division of joint rates other than those of railroad companies. It is very important that the Commission be given this authority to properly adjust difficulties between utilities.

*Emergency Rates.*

The Commission should be given power and authority to order the establishment of emergency rates without a hearing if in the judgment of the Commission public necessity and convenience require such action.

*Review of City Ordinances.*

Section 33 of the public utilities law confers upon the Commission certain powers in case a utility or the taxpayers of the city desire to appeal from an ordinance of a city fixing rates, etc. The section provides that while any proceedings to resist the action of the city are pending before the Commission or in any court, the ordinance shall be inoperative. No provision, however, is made for substituting the order of the Commission after review for the ordinance passed by the city.

*Industrial Tracks.*

Under existing laws the Commission has no power to order railroad companies to build sidetracks to industries other than mills and elevators. It is very important that the Commission should have this power, and the law should be amended giving the Commission power and authority to require railroad companies to build industrial sidetracks whenever the same are necessary, and fix the compensation to be paid therefor.

*Joint Rates.*

Your attention is expressly called to the language used in item 1, section 1, of chapter 193 of the Session Laws of 1909, commonly known as the Kansas maximum-freight-rate law, which reads as follows:

*"Item No. 1.—Rates quoted herein will apply as maximum on single-line carload shipments of commodities named between stations in Kansas. Where shipment is over rails of two or more companies, the sums of the locals shall constitute the rate therefor."*

The rates prescribed in the law referred to are for the transportation of certain commodities in carload lots over a single line of railway within the state of Kansas. If the shipment moves over two or more lines of railway the rates under this provision will be merely the sum of the local rates over each line. Several sections of the public utilities law give the Commission express power to fix just and reasonable joint rates, and while it was evidently the intention of the legislature to repeal the provision of the maximum-freight-rate law fixing joint rates at the sum of the local rates, some question has been raised as to the Commission's power to do so. In a recent action the Commission has fixed joint rates over two lines on the basis of the continuous mileage rates plus a fixed differential, and the railway companies are resisting the order of the Commission on the ground that it has no power to fix such rates.

It is a very common practice in many of the western and southern states to fix joint rates over two or more lines on a basis materially lower than the sum of the intermediate locals. Various methods have been employed in different states; the

rates promulgated range from 75 per cent to 90 per cent of the sum of the intermediate locals.

#### *Classification of Railroads.*

The Commission should be given authority to classify the railways of the state according to their gross earnings. This has been done in states like Iowa and Illinois, where provision is made for a low scale of rates over the trunk lines and a slightly higher scale of rates on the weak lines. Many of the controversies in the past between the railways of the state and the Commission have been due to the attempt to establish the same basis of rates for all lines, regardless of their financial condition. It is possible that a strict construction of the present law would give the Commission the power to classify the roads, but such authority should be granted in positive terms.

#### *Weighing.*

The Commission has very limited authority over the weighing methods and practices of the carriers. It is our recommendation that the authority of the Commission be enlarged to include this subject.

#### *False Billing.*

The present laws do not impose any penalty upon a carrier or shipper who is guilty of false billing in order to secure preferential rates or service. The interstate commerce law makes it a misdemeanor to obtain transportation of property at less than the regular rate by means of false billing, false classification, false weighing or false report of weight. Such a provision should very properly be enacted into law in this state.

#### *Passes.*

The present law provides that the commissioners and all employees shall have the right to pass at all times over all the roads or any part thereof in the state without charge. On account of the fact that the Commission's jurisdiction has been extended to include public utilities as well as common carriers, and the necessity for hearings in cases involving telephone, gas and other utility companies throughout the state, we do not deem it proper that the railway companies should be required to furnish free transportation to the Commissioners or to the employees. An allowance should be made for all necessary traveling expenses, including railroad transportation.

#### *Examiners.*

The Commission at the present time has no power to employ examiners or other persons to take testimony. On account of the increase in the work of the Commission, it will soon become necessary to employ examiners to hear cases and report

to the Commission. Authority should be given to the Commission to employ such examiners as in its judgment are necessary. Some provision should also be made for employing a regular reporter for the Commission.

*Conflict in Laws.*

Some change should be made in the laws relating to the issuance of charters. At the present time the Charter Board must pass upon the application for a charter, while a common carrier or public utility seeking to do business in the state must obtain from the Public Utilities Commission a certificate of public convenience and necessity and also authority to issue securities. Some question has been raised whether under the blue-sky law public-service corporations are not required to apply to the bank department for authority to sell securities. This imposes an undue burden on the common carriers and public utilities of the state. The most satisfactory way to handle such matters would be to give the Public Utilities Commission the power of a corporation commission, like the corporation commissions of Oklahoma, Virginia and other states now enjoy. This would place complete control in one tribunal and prevent much confusion.

*Appropriations.*

It is our recommendation that the following appropriations be made for the next two years:

	1914	1915
Three commissioners, \$4000 each.....	\$12,000	\$12,000
Secretary .....	1,800	1,800
Rate clerk .....	5,000	5,000
One stenographer .....	1,000	1,000
One stenographer .....	900	900
Two clerks, \$900 each .....	1,800	1,800
Contingent fund for Commission .....	25,000	25,000
Attorney for Public Utilities Commission .....	2,500	2,500
Stenographer for attorney .....	1,200	1,200
Contingent fund for attorney .....	5,000	5,000
	<hr/> \$56,200	<hr/> \$56,200

For increased salary of commissioners, January 1 to July 1, 1913, \$2,250.

Respectfully submitted.

GEO. PLUMB, *Chairman.*

FRANK J. RYAN.

JOHN T. WHITE.

W. G. GRICE, *Secretary.*

## CASES CONTESTED IN COURT.

On being appointed to the position of attorney for the Board of Railroad Commissioners, January 9, 1911, Mr. Marshall found, in the supreme court of this state, the State of Kansas, *ex rel.* John S. Dawson, v. C. B. & Q. Rld. Co. and C. R. I. & P. Ry. Co.; *In re* Gardner, and the Mo. Pac. Ry. Co., v. Board of Railroad Commissioners.

The State of Kansas, *ex rel.* John S. Dawson, v. C. B. & Q. Rld. Co. and C. R. I. & P. Ry. Co., 85 Kan. 649, was an action commenced by John S. Dawson in the supreme court of the state to compel the railroad companies to put in track connection between their tracks at the town of Calvert, in Norton county. The order of the Commission was upheld.

*In re* Gardner, 84 Kan. 264, was an original proceeding in the supreme court in habeas corpus, brought to secure the release of M. G. Gardner, the agent of the Union Pacific Railroad Company at Topeka, for refusing a requisition made for the transportation of Major Arthur Mills, of the Kansas National Guard, at the rate of one cent per mile, the statutory rate for the transportation of members of the National Guard. This statute was by the supreme court held unconstitutional, the court saying that the state does not have power to compel the railroads to carry members of the National Guard at one cent per mile while other people pay two cents per mile.

The Mo. Pac. Ry. Co. v. Board of Railroad Commissioners of the State of Kansas, 85 Kan. 229, was an appeal prosecuted by the Missouri Pacific Railway Company from a judgment of the district court of Shawnee county, refusing to enjoin the Board of Railroad Commissioners from enforcing an order requiring freight terminal facilities at Kansas City and the construction and maintenance of a freight depot at that place. The supreme court held the order of the Railroad Commissioners a reasonable requirement.

These three cases were briefed and argued by Mr. Marshall after coming into the office.

The State of Kansas v. Kansas Natural Gas Company, State of Kansas v. Wichita Natural Gas Company, State of Kansas v. Mo. & Kan. Interurban Railway Company, and the Mo. & Kan. Interurban Railway Company v. The Public Utilities Commission, are cases that have been commenced and tried and final judgment rendered in the district courts of several counties of the state. There were some ten cases against the Kansas Natural Gas Company the object of which was to prevent the Kansas Natural Gas Company from increasing the

price of natural gas without the consent of the Commission. This litigation resulted successfully, and was prosecuted in connection with the attorney-general of the state.

The cases in which the Missouri and Kansas Interurban Railway Company was interested were commenced in the district court of Johnson county, Kansas, the object of which, on the part of the Commission, was to prevent the Interurban Railway Company from discontinuing certain stations and from establishing certain regulations which the Commission deemed opposed to the best interests of the patrons of the railway company. This litigation resulted in the continuance of the stations and the abrogation of obnoxious regulations and the promulgation of regulations acceptable to the people along the line of the railway.

C. R. I. & P. Ry. Co. v. Public Utilities Commission; M. K. & T. Ry. Co. v. Public Utilities Commission; M. K. & T. Ry. Co. v. Public Utilities Commission; State of Kansas v. Missouri & Kansas Telephone Company, and the State of Kansas v. Miami County Telephone Company, are still pending. The C. R. I. & P. Ry. Co. v. the Commission is a case to enjoin the enforcement of an order of the Commission directing that certain joint rates on flour be made from Inman, Kan., to points in the southeastern part of the state on the St. Louis & San Francisco railroad. The order of the Commission establishing joint rates over all railroads in Kansas makes it unnecessary to further defend in this case.

The M. K. & T. Ry. Co. v. Public Utilities Commission is an action brought by the railroad, in the district court of Lyon county, to enjoin the enforcement of an order directing the establishment of a depot and agency at Sherman, in Cherokee county. The railroad has agreed to build the depot and establish the agency, thus carrying into effect the order of the Commission.

The M. K. & T. Ry. Co. v. the Public Utilities Commission, another suit, is an action to enjoin the Commission from enforcing an order directing the railroad to stop certain trains at Chetopa and keep a night agent at this station. Judgment has substantially been agreed upon in this case.

State of Kansas v. Mo. & Kan. Telephone Company is an action brought to enjoin the telephone company from removing a portion of its records from Topeka to Missouri. There will probably be no further litigation in this case.

State of Kansas v. Miami County Telephone Company is an action to enjoin the Miami County Telephone Company from engaging in business as a public utility without the consent of the Commission. This telephone company is endeavoring to conduct its business as a mutual telephone company. So long as this is done no cause of action exists against the telephone company.

In the last five cases litigation is practically concluded. There yet remains to be rendered judgment in these cases, which has been substantially agreed upon in all.

The St. J. & G. I. Ry. Co. v. the Commission is a contested case still pending and remains yet to be tried. This is an action to enjoin the Commission from enforcing an order directing the building of a depot and the establishment of an agency at Blair, in Doniphan county, Kansas.

The Missouri Pacific Railway Company v. the Commission is an action brought by the Missouri Pacific to enjoin the Commission from enforcing an order directing that the Missouri Pacific carry coal from the southeastern part of the state to Claflin, in Barton county, Kan., for \$1.10 a ton. This is a contested case and yet remains to be tried.

There is pending in the federal courts of this state an action brought by each of the railroads against the Railroad Commission to enjoin the enforcement of the order directing that passengers be carried in this state at two cents per mile. This litigation stands on stipulation awaiting the result of actions in similar cases in the state of Nebraska.

On December 5 injunction proceedings against the Commission were filed in the district court of Shawnee county, Kansas, by all the railroads of this state interested, to enjoin the enforcement of the order made by the Commission establishing joint rates over the several railroads throughout the state of Kansas.

#### **Rate Cases before the Interstate Commerce Commission.**

##### **MISSISSIPPI RIVER RATE CASE.**

For many years the Kansas shipping public has complained bitterly of discriminations in the rates from the Mississippi river and points east thereof and through the Galveston gateway to Kansas cities. So great was this complaint that in 1909 the Kansas legislature passed a concurrent resolution calling upon the Railroad Commission to make an immediate investigation of the rate conditions of the state and file suit with the Interstate Commerce Commission seeking a readjustment of the rates on a just and equitable basis.

As a result of this investigation the Commission brought an action before the Interstate Commerce Commission against all of the Kansas lines praying for a material reduction in the rates from the Mississippi river, Peoria and Chicago.

This case was prepared with great care, and no effort or expense spared to show the true conditions to the Interstate Commerce Commission. The evidence presented shows that the rates on classes and commodities from Chicago, Peoria and Mississippi river points to the cities of Topeka, Salina,

Hutchinson, Wichita, Dodge City and Goodland, and other cities and towns in the state of Kansas, are unjust, unreasonable and prejudicial to the interests of the Kansas people. The rates to the larger part of the state of Kansas are merely the sum of the local rates from the Mississippi river to the Missouri river and the local rates from the Missouri river west. In the southeast corner of the state, in what is known as percentage basis territory, the rates are slightly less than the full combination on the Missouri river. This is also true in the extreme western portion of the state, where the Colorado common-point rates hold down the Kansas rates. A very small territory in the northeast corner of the state is likewise affected by influences due to the Lincoln, Omaha and Hastings, Neb., adjustments.

This case is probably the most important one ever brought for the benefit of the Kansas people, and it is confidently expected that the Interstate Commerce Commission will order a very material reduction in the rates at an early date.

#### GALVESTON RATE CASE.

Early in the year 1910 the Southwestern Shippers' Association, consisting of shippers from Kansas, Oklahoma and Texas, was formed for the purpose of securing lower freight rates from the Atlantic seaboard territory to points in the interior in the southwest through the Galveston gateway. At that time the rates through the north Atlantic ports, and the south Atlantic ports, including Galveston, to Kansas points were identically the same, regardless of the short water haul and the long rail haul through the north Atlantic ports, while through Galveston the water haul is practically 2200 miles and the rail haul but 600 to 700 miles to Wichita, Hutchinson and other Kansas points.

The Kansas Commission intervened in this case and gave the shippers all the assistance possible. Hearings were held in Kansas City, New York, Washington and Galveston. The shippers contended that their close proximity to tidewater entitled them to a much better basis of freight rates than cities located on the Missouri river, and points where the rail haul is much greater, now enjoy.

In an opinion under date of June 6, 1912, the Interstate Commerce Commission found that the present class rates from Galveston, Tex., to Wichita, Kan., and Oklahoma City, Okla., are unreasonable, and held that the following rates to Wichita should not be exceeded:

Class .....	1	2	3	4	5	A	B	C	D	E
Rates .....	1.32	1.12	.94	.86	.68	.71	.63	.52	.41	.35

The Commission found that the monopolistic conditions which have existed in the water traffic between the Atlantic seaboard and Galveston have resulted in excessive charges, but

to what extent the Commission was unable to say. The Commission held that the present class rates from the Atlantic seaboard territory to Wichita, Denver and Oklahoma City are not unreasonable.

*Southwestern Shippers' Association v. A. T. & S. F. Rly. Co. et al.*  
24 I. C. C. Rep. 570.

#### SALT RATES.

At the request of the Kansas salt producers, the Commission brought an action before the Interstate Commerce Commission, seeking a readjustment of the salt rates from the Kansas field to the Mississippi river and intermediate points, on the ground that the rates from the Kansas producing territory to the markets at the Mississippi river were unreasonably high when compared with the rates on the same commodity from Detroit, Mich.

The rate on salt from the Kansas field to St. Louis was 13 $\frac{1}{3}$  cents per hundred pounds, while from Detroit to St. Louis it was but 7 $\frac{1}{2}$  cents per hundred pounds for a haul of practically the same distance. The Commission decided that the Kansas shippers were being discriminated against by the action of the Wabash Railway Company, which participated in the rate from the Kansas field to St. Louis and fixed the rate from Detroit to St. Louis. The company was ordered to cease and desist from the discrimination, either by advancing its rate from Detroit to St. Louis, or reducing the rate from the Kansas field to St. Louis. The railroad company attempted to cancel its through rate from Kansas, but has been directed by the Commission to restore the same.

In a later opinion, involving applications for relief from the operation of the fourth section, the Commission denied permission to the direct lines to maintain a higher intermediate charge for transportation of salt in violation of the fourth section, but where the direct line observes the fourth section, a competing line, whose mileage exceeds that of the direct line by not less than 15 per cent, may meet the rate of the direct line without reducing its present intermediate charge. The effect of this decision was to reduce the rates from the Kansas field to a great many points on the lines of the Missouri Pacific and Rock Island in Missouri between Kansas City and the Mississippi river. Some of the carriers advanced their rates to the Mississippi river crossings in order to maintain the present scale at intermediate points, and this matter is now under investigation.

22 I. C. C. Rep. 407.

*In re Fourth Section Application*, 24 I. C. C. Rep. 192.

## GLEN ELDER - NEW ORLEANS FLOUR RATE.

The firm of F. M. Kaull & Son, of Glen Elder, Kan., complained to the Commission that the rate on flour to New Orleans for export from Glen Elder was 31¼ cents, while the domestic rate was 32¾ cents. From near-by points, where the domestic rate to New Orleans was 32 cents, the export rate was 26 and 27 cents. The Commission therefore filed a complaint with the Interstate Commerce Commission, asking that the export rate be readjusted, and in the Commission's opinion under date of November 14, 1911, it was held that the rate in the future should not exceed 28 cents, and the Missouri Pacific was required to put Glen Elder substantially on a parity of rates to Galveston with neighboring milling points, even though the result might be to short haul the Missouri Pacific.

Board of R. R. Coms. v. Mo. Pac. Rly. Co. *et al.*  
22 I. C. C. Rep. 24.

## EXPRESS RATES ON DRESSED POULTRY.

On account of an ambiguous and apparently unreasonable classification rule of the express companies covering the handling of dressed poultry shipments, complaint was made to the Interstate Commerce Commission asking that a modified rule be established. The complaint came from the produce shippers in Kansas, who were being continually overcharged, and as a result of this action, in a decision rendered June 3, 1911, the Commission held that the rule of the express companies respecting the weights at which shipments of dressed poultry are billed when packed in ice was unreasonable and required the companies to adopt a rule providing that shipments of dressed poultry when packed in ice should be billed at 25 per cent less than their gross weight, but in no case at less than the net weight of the poultry, as invoiced by the shipper, plus the weight of the container.

Board of R. R. Coms. v. Adams Express Co. *et al.*  
21 I. C. C. Rep. 283.

## CLASSIFICATION MATTERS.\*

On December 30, 1911, the Western Classification Committee issued Western Classification No. 51, effective February 15, 1912. The new classification contained several hundred new ratings and a great many changes in the old rules and ratings. The number of the advances and reductions was substantially the same, but the advances were on more important commodities, and this Commission, realizing the great importance of this matter to the shipping public of the state, joined with other commissions of the Mississippi valley and asked the In-

\* In an opinion handed down on December 9, 1912, the shippers were sustained in the great majority of their contentions and the carriers required to revise No. 51 in accordance with the Commission's views. (*In re* Suspension Western Classification No. 51, 25 I. C. C. Rep. 442.)

terstate Commerce Commission to suspend Western Classification No. 51. This was done, and hearings have been held at various points throughout the territory, where the shippers have had an opportunity to present their contentions. Representatives of the Commission were present in Washington at the oral argument on October 16 and 17, and argued in favor of a modification of the new classification and a substitution of a great many of the old rules and rates. An early decision in this matter is expected for the reason that the suspension of No. 51 expires on February 14, 1913.

#### COLORADO COAL RATES.

In 1910 the Interstate Commerce Commission decided, in the case of Cedar Hill Coal & Coke Company *et al.* v. Colorado & Southern Railway Company *et al.*, 17 I. C. C. Rep. 479, that through routes and rates from the coal mines in the Walsenburg district in Colorado, on the D. & R. G. and C. S., to points on the A. T. & S. F. system and controlled lines to the east and south of Colorado should be established on the same basis as contemporaneously in effect from the Canyon City district. Upon the expiration of the order the carriers attempted to advance the rates from Walsenburg 35 cents per ton higher than the rates from Canyon City. A protest against such action was filed and the advances suspended. The case was heard at Denver on July 15, 1912, and the carriers were called on to justify the proposed advances. The action was opposed by the Commission, and we have every reason to believe that the old basis will be reestablished.

#### CASES SUSPENDED.

In July, 1912, the Kansas lines attempted to advance the rates on horses and mules from central and western Kansas to St. Louis, Peoria and Chicago in amounts ranging from 50 cents per car in the eastern part of the state to \$15 per car in the western part. The horse and mule dealers of the state being vigorously opposed to the advance, the Interstate Commerce Commission was requested to suspend the advances until a hearing could be held on the merits. A hearing was held on September 30 in Topeka, and an early decision will probably be handed down by the Interstate Commerce Commission.

The Commission has also participated in a hearing on the suspension of advances in rates on linseed oil from Minneapolis, Minn., and other northern producing points to Kansas.

A recent attempt on the part of the carriers to advance the rates on lumber from points in Arkansas, Louisiana and other points in the south to Kansas destinations has been suspended until the 31st day of March, 1913. The advances contemplated would affect a large portion of the state, and particularly the eastern portion, where the advances from certain groups in

the south are as much as 3 and 4 cents per hundred pounds. This action alone will save the lumber dealers of the state of Kansas many thousands of dollars in freight charges.

The Interstate Commerce Commission has been conducting an investigation of the alleged irregularities and discrepancies in the weighing of freight by carriers subject to the act to regulate commerce. This Commission has taken the matter up with several hundred shippers of various kinds throughout the state, and it is gratifying to learn that the grievances in the state of Kansas have been reduced to a minimum.

## REPORT OF THE WORK OF THE ENGINEERING DEPARTMENT.

*From Date of Establishment to November 1, 1912.*

By C. C. WITT, Engineer.

### ORGANIZATION.

Acting under powers conferred upon them by section 8, chapter 238, Laws of 1911, the Public Utilities Commission of the state of Kansas employed Mr. C. C. Witt as engineer, who commenced the work of appraisal of the physical property of all the railway companies operating in the state of Kansas, in compliance with section 28, chapter 238, Laws of 1911, which is as follows:

*"Valuation of property.* Said Commission shall have the power and it shall be its duty to ascertain the reasonable value of all property of any common carrier or public utility governed by the provisions of this act, used or required to be used in its services to the public within the state of Kansas, whenever it deems the ascertainment of such value necessary in order to enable the Commission to fix fair and reasonable rates, joint rates, tolls and charges, and in making such valuations they may avail themselves of any reports, records or other things available to them in the office of any national, state or municipal officer or board."

As occasion has arisen, valuations and investigations of the service and rates of other utilities have been made. As the work has broadened additional assistance has been employed, until at the present time the force in this department is composed of six men—electrical engineer, Mr. Frank H. Hanson, and as assistants in railway appraisal work, Prof. B. J. Dalton, Messrs. T. J. Strickler, W. E. King and J. E. Hopkins.

### PREPARATION OF FORMS.

The first work was the formulating and printing of thirty-six different blank forms, covering in detail every item that enters into the construction of a railroad. Some of these forms call for thirty or more different details. The classification corresponds to "the classification of expenditures for road and equipment as prescribed by the Interstate Commerce Commission for steam roads."

### COÖPERATION OF RAILWAY COMPANIES.

Representatives of the railway companies interested, both legal and engineering, were present at a preliminary conference held at the office of the Commission on May 11, 1911, at which the whole subject of valuation was discussed and the methods to be pursued as planned by the Commission explained.

Sample sets of blank forms and instructions for compiling the inventory and for preparing the right-of-way maps and profiles were distributed to the representatives, and a second conference held on June 6, 1911, at which the forms and methods of compiling the requisite data were thoroughly discussed.

In general, it was required of the railway companies that they divide their lines in this state into convenient sections, approximately 100 miles long, reporting the physical items in rotation for each section, beginning at one end and proceeding to the other, choosing the sections in such manner that the field inspection may begin at one end of the line and pass successively over the different sections, each section being complete in itself, except in the equipment items, which will be reported for the entire line in Kansas, prorated on the locomotive or car miles made in Kansas to the miles made on the entire system.

This inventory is required in duplicate, one copy to be filed in the office of the Commission and to constitute the railway companies' appraisal, and the other to be used by the engineering department in checking the items in the field.

The appraisal is of the property as it was June 30, 1911. Right-of-way maps and profiles covering the entire line in this state, also blue prints of both sub- and superstructure of large or special bridges and other structures, standard pile bridges, stockyards and track plans, copies of recent construction contracts, and final estimates or other special data that would assist in the determination of a correct and reasonable appraisal were required to be furnished to the Commission.

The plan of requiring the railway companies to furnish this data has met with the approval of all the companies interested, and it is believed that this method results in a more accurate appraisal than could be obtained by engineers employed by your Commission who went into the field and collected their own data, because the railway company has access to records and a familiarity with the property that could not be obtained by any one not in the employ of the company. It also insures a more accurate report to be able to check the inventory of another and add the corrections.

Again, the expense is borne principally by the railroad companies, although, of course, ultimately paid by the shippers, however; the expense, if borne entirely by the state, would be several times as great as in the present method; and inasmuch as the railway companies would check the entire work from their own records, it is better for them to do it in the first place. Nearly all the larger companies have established departments, composed of trained men with a high-class engineer at their head, to carry on this work. Frequent conferences have been held with the representatives of the railroad companies for the purpose of securing uniformity in their reports, and it is believed that a thorough discussion of the different items will eliminate some of the factors that have been the cause of needlessly cumbering the records with expert testimony in some of the rate cases in which appraisals have been used. The railway companies interested have organized an association among themselves for the purpose of securing uniformity in the reports. They have held meetings once or twice a month from the inception of the work. While it is impossible to agree upon all items, it is believed that a great deal has been accomplished that will simplify the presentation of the appraisal should the same ever be used in any court proceedings.

## FIELD INSPECTION.

As soon as the companies' inventories are received they are taken out on the line by the Commission's engineers and a thorough inspection made of each item; its present physical condition is noted and corrections made. The accuracy of the profiles is checked in a general way; the topography and soil conditions of land through which the railway passes are noted. Frequent stops are made to measure width of subgrade, width and depth of ballast, to count number of ties to rail for several successive lengths, to inspect bridges, culverts, etc.

Accurate record is kept of the beginning and ending, and kind of fences, number of signs, highway crossings, etc.; all buildings are measured and water and fuel stations thoroughly checked, shop machinery inspected, etc. These inspections have been made on foot and by gasoline motor section cars.

## COMPILATION OF DATA.

After the field inspection the report is brought to the Commission's office and a cost price placed on each item; grading quantities calculated from the profiles, and right-of-way acreages from the right-of-way maps.

## ITEMS CONSIDERED IN APPRAISALS.

In making a valuation of railway property many things must be taken into consideration. In the case of *Smythe v. Ames*, 18 Supreme Court Reports, 418-484, the supreme court of the United States specifically pointed out some of the things which must be taken into consideration, in the following language:

"We hold however that the basis of all calculations as to the reasonableness of rates to be charged by a corporation maintaining a highway under legislative sanction must be the fair value of the property being used by it for the convenience of the public. And in order to ascertain that value, the original cost of construction, the amount expended in permanent improvements, the amount and market value of its bonds and stock, the present as compared with the original cost of construction, the probable earning capacity of the property under particular rates prescribed by statute, and the sum required to meet operating expenses, are all matters for consideration and are to be given such weight as may be just and right in each case. We do not say that there may not be other matters to be regarded in estimating the value of property. What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience. On the other hand, what the public is entitled to demand is that no more be exacted from it for the use of public highway than the services rendered it are reasonably worth."

Interstate Commerce Commissioner Lane, in the *Western Advance Rate Case*, says: "Perhaps the nearest approximation of the fairest standard is the *bona fide* investment . . . sacrifice made by the owners of the property, . . . considering as part of the investment all shortages of returns that there may be in the early years of the enterprise. Upon this, taking the life history of the road through a number of years, its promoters are entitled to a reasonable return. This, however, is manifestly limited; for a return should not be given upon wastefulness, mismanagement or poor judgment, and always there is present the restriction that no more than a reasonable rate can be charged."

In this state we have undertaken to secure the cost to reproduce the

property new and the present physical value. It is hoped to secure the original cost later. The other factors mentioned in the *Smythe v. Ames* case are principally accounting items.

#### THE COST TO REPRODUCE NEW.

"The cost to reproduce new" is an estimate of the cost of building the property in its entirety; that is, financing, purchasing or condemning the right of way, constructing the road bed, buildings, etc., just as they exist at the date of appraisal, assuming that all railroad property has been wiped out of existence and is to be replaced with new materials; prices of materials and labor as of the date of the appraisal. This is an impossible assumption.

#### THE PRESENT PHYSICAL VALUE.

"The present physical value" is an estimate of the value of the physical property as it exists to-day in its depreciated or appreciated condition, and of necessity takes into consideration the existence of the property throughout its actual past life. Several things must be borne in mind. Efficiency is not a measure of cost or value. Cost and value are two different items. There may be several values depending upon the purpose for which value is estimated, but cost is a fixed amount for all purposes.

A partially worn tie or locomotive that has seen several years' service may have as good an operating efficiency as when new, but the value of the unit to render its peculiar service, when measured by the remaining available life of the unit, is constantly decreasing. It is the depreciated value due to the unit's depreciated condition that is represented by the appraisal headed "Present Physical Value," or, in other words, it is the cost new, less the depreciation due to use or weather stress, obsolescence or inadequacy.

#### ORIGINAL COSTS.

Actual original costs are extremely difficult to secure, for many reasons. Quite frequently the original records have been destroyed, accidentally or otherwise, and in a good many cases no accurate records were kept, and frequently in the exchange of properties the original cost records were not transferred; so that in the case of old roads it is nearly always necessary to estimate, in part at least, the original cost.

#### RIGHT OF WAY.

There is no other item that has been discussed as much as right-of-way values. The courts have held that the railroad company, although an investor in land dedicated to a public use, and not having a fee simple in the land acquired by eminent domain, is nevertheless entitled to any increase in value, regardless of the cause of increase.

If the appraisal is of "the cost to reproduce new," land must be treated as any other item, and an estimate made of the cost of securing the right of way, including all severance and other damages, as if the present right of way, station grounds and terminals were not owned by the company, but had to be secured by the methods commonly pursued, all improvements and conditions of abutting property being as they actually exist at the date of appraisal.

If the appraisal is of the "present physical value," the element of time

or past existence of the property as railroad right of way must be considered. The land itself has increased in value in proportion to the increase of abutting property, but the money paid for severance damages, engineering, legal expenses and other expenses of acquisition has not increased, and should be stated as of original costs. When once accounted for this item is settled for all time.

For the purpose of securing the present market value of the railroad right of way and station grounds if the same were devoted to other purposes, the assessed value of all farm land through which the railway extends and of all abutting lands in towns and cities was secured from the Tax Commission and the records in each county. We also secured a record of all *bona fide* sales (that is, excluding quitclaim, foreclosure deeds, etc., and deeds for nominal considerations) and assessments in the last three years of lands in the vicinity and of a similar class to those occupied by the railroad right of way; also the assessment ratio of each township (that is, the ratio between market value as evidenced by *bona fide* sales and the assessment); also opinions of experts, real-estate agents, bank cashiers and others as to the fair average market value.

For determining the amount of probable damages to be paid by the railway company, or excess or multiple cost, records of purchases of right of way and condemnation suits, etc., for a number of lines were compiled and the resulting figures compared with the market value, at the time of purchase, of the land through which the railroad passes. From these figures it appears that the total cost of the right of way for extended sections ranges from two and one-fourth to two and one-half times the market value of the property through which it passes, while individual tracts range from donations to ten times the market value.

Research has also shown that the multiple is larger for farm property than for town property, and that the larger the town and more expensive the land the less the multiple or increased cost becomes. It is difficult to assign a ratio that will fit all cases. However, it seems to be true that a right of way purchased through farm property will cost about two and three-fourths times the fair market value, while if the property has to be condemned it will cost over three times the fair market value. Small towns and villages will cost about two and one-half times, towns of 10,000 population will cost a little over two times, while large cities of over 100,000 population will cost from one and one-half to two times.

The fact must not be lost sight of that, although land is purchased or condemned, it frequently happens that a bonus is paid to the company sufficient to offset this excess cost and sometimes to pay for the right of way itself. Again, in estimating damages to be paid, it is generally considered that the farm as a whole has been damaged; that is, the damage is assessed at so much per acre for the remaining land. As a matter of fact, the farm has not been damaged to any appreciable extent, as is evidenced by the fact that the property through which a railroad passes sells for as high a price as similar adjacent land, and if another railroad passes through the same property, or it is desired to buy an additional strip alongside the old right of way, the same per cent of excess cost for damages has to be paid, showing that this question of damages is almost

entirely a sentimental one as regards land. Of course this does not apply to exceptional cases, where a man's barn is separated from his house or it is necessary to remove some of his buildings, destroy wells, orchards, etc.

In estimating the amount actually paid in excess of the fair market value, to be used in the appraisal of the "present physical value," the average farm values in the state of Kansas for the last fifty years have been plotted, assuming that roads built prior to 1875 were constructed almost entirely through farm or wild lands with only a few small towns, and that those constructed more recently have met with larger towns and better improved farms. A second curve has been plotted, with values three times the average farm values for 1860, decreasing to two and one-half times the average farm value for 1910.

This is an assumption in excess of the facts, as a great deal of the main-line right of way in this state was secured through United States government land grants, and many miles of branch lines have been donated or the money to pay for the right of way has been raised and turned over to the constructing company by the county. This is offset to some extent by excessive cost of line revisions.

The space between these curves, representing the excess original cost of the right of way above the market value of the land at that time, is the following per cent of the present market value for the stated period. Therefore, knowing the date of construction and the present market value of the property through which the railway passes, reference to the table will give the per cent of the "present market value" that represents the original excess cost.

Year.	Per cent.
1860.....	42 ½
1865.....	44 ¾
1870.....	47 ½
1875.....	50 ¾
1880.....	55
1885.....	60
1890.....	66 ¼
1895.....	75
1900.....	87 ½
1905.....	102 ½
1910.....	150

#### ROADWAY ITEMS.

Taking up the other items in the classification, there are none that are not subject to well-known current costs, except engineering and engineering superintendence. However, items "11—ballast" and "12—tracklaying and surfacing" are subject to considerable controversy, due to the fact that governing conditions are different for nearly every job—so much so that the item of tracklaying alone may vary from \$500 to as much as \$4000 per mile in exceptional cases. This requires a study of what is a fair average condition and resultant cost. To one unfamiliar with the system of accounting adopted by the Interstate Commerce Commission this item will seem unduly high and the ballast item low. This results because according to the Interstate Commerce Commission classification the "tracklaying and surfacing" includes all ballast charges subsequent to unloading.

The present physical value of all roadway items is determined by inspection, supplemented by theoretical life tables.

#### EARNINGS AND OPERATING EXPENSES DURING CONSTRUCTION.

In constructing a section of line one hundred miles in length the practice is to establish a material yard at the end nearest to the source of supply of the materials of construction. In estimating the cost of different items, such as rail, ties, etc., freight is added from the point of origin to the material yard. Additional charge is made for hauling out of materials by team ahead of tracklaying, such as pile bridge material, culverts, etc.

The charge for hauling out track materials from the material yard is taken care of in the tracklaying account. The item for "Earnings and operating expenses during construction" covers the charge for train service and labor necessary for all material that has not previously been taken care of, such as station buildings and section houses, permanent water and coal stations, etc., and maintenance of track during construction period.

#### ENGINEERING AND ENGINEERING SUPERINTENDENCE.

Extensive research has demonstrated that the cost of this item amounts to about 4 per cent of the cost of all roadway items plus the cost of the right of way. This does not mean that 4 per cent of each item is chargeable to engineering and engineering superintendence, but that the total cost is equivalent to 4 per cent of the total cost of the roadway and right of way. There are, of course, exceptional cases where excessive cost of right of way or extensive shops, etc., will affect the percentage.

#### EQUIPMENT.

Since equipment is transferred from place to place, it is necessary to appraise the entire equipment of the system and prorate the same to the state in the same ratio that the equipment mileage of each class in Kansas bears to the equipment mileage for the entire system, with the exception that the work equipment is prorated in the same ratio that the entire equipment mileage in Kansas bears to that of the system.

This division will lead to an error where the lines in the state are not a fair criterion of the average lines of the system. In that case it is necessary to appraise only such engines as operate intra- and interstate, prorating the interstate on a mileage basis.

Since it is impossible to personally inspect all the equipment, the present physical value is determined by depreciation tables based on a study of the average life of millions of dollars' worth of equipment.

#### GENERAL EXPENDITURES.

General expenditures include:

*Law expenses*, except those incurred in connection with condemnation of right of way or station grounds, which are charged to right of way.

*Stationery and printing.*

*Insurance premiums* paid on property during construction.

*Taxes and assessments* levied and paid on property belonging to the company while under construction and before the road is open for commercial operation.

---

*Interest during construction.* The determination of this account requires an estimate of the length of time required to construct the particular section under consideration, and the assumption that all the money for construction will not be required during the entire period of construction, but that the funds will only be taken out of circulation as required, and the result will be equivalent to paying interest for the full period on only half the total sum required or for half the period on the entire sum required.

*Contingencies.* This item is assumed to cover all unforeseen expenses that it is impossible for human experience to forecast. Under the method used of appraising a railroad after construction, when almost every item can be seen and duly accounted for, this item is much smaller than in making a similar allowance for a projected line. However, there are always some features that enter into construction accounts that are only apparent during construction, and no amount of inspection sometime after completion will disclose their existence, such as damages resulting from floods when banks are soft and foundations open, etc.; damage to abutting property due to construction operations, sink holes, etc. Also, there is no inventory made that is absolutely perfect. Water lines, drains, etc., underground are often overlooked, for instance. As stated above, the greater care used in the appraisal the less this item becomes.

*Other expenditures* consist of organization expenses, salaries and expenses of executive and general officers of a road under construction, clerks in general offices engaged on construction accounts or work, rent and repair of general offices, etc.

It is customary to express these accounts as per cents of the total expenditures for all other items. Extensive investigations have been made to determine what constitutes a reasonable and fair percentage. From these researches it has been determined that 9½ per cent of the total of all other items will cover the charge for "general expenditures" for a road in Kansas.

#### PER MILE OF ROAD.

Figures given as the cost per mile of road are average figures only, and can not be used as the cost of constructing any one mile of line; for instance, because the entire line is not fenced, the average cost per mile does not represent what one full mile of double-line fence would cost. It does represent, however, the average cost per mile of the line under consideration as constructed.

#### ADAPTATION AND SOLIDIFICATION OF ROADBED.

Nothing is allowed for the item known as "adaptation and solidification of roadbed," except as reflected in the condition of the roadbed and ballast at the time of making the inspection. This item has been given considerable prominence recently in values placed by railway companies and others engaged in making railway appraisals, and is added because of the work done in repairing the damages to track in line and surface, due to settlement of embankments, to the cost of clearing out ditches and cuts, etc. While there is no question that such expense is necessary, it is an item properly chargeable to maintenance, and is so charged by the operating railway companies and paid for out of the revenues, the same as re-

newing worn-out ties, and should not constitute an item of physical valuation. The fact that this work is necessary proves that there has been depreciation in the physical condition of the track, due to the action of the elements and the pounding of the trains, and this depreciation has to be met until the embankment becomes solid. The very most that could be allowed would be that the roadbed is maintained at 100 per cent.

#### INTANGIBLE VALUES.

Nothing has been allowed for intangible values, such as going values, good will, development cost, franchise, the cost of securing business, etc. Neither has any consideration been given discount and commission on bonds.

#### APPORTIONMENT OF VALUES.

The proper apportionment of values between inter and intra passenger and freight business is one of the most important problems that confronts any state, as a comparatively small error will affect seriously any rate under consideration.

This is to a great extent an accounting proposition, but is so closely allied to the engineering determination of values as to require coöperation between the engineering and the accounting departments in its determination.

It is intended to make a more complete report along this line at a later date.

#### UNION PACIFIC APPRAISAL.

Attached hereto are a number of tables showing the "cost to reproduce new" and the "present physical value" of the property of the Union Pacific Railroad Company, as estimated by this department. The appraisal of the property of the other railroads in the state of Kansas is being prosecuted with vigor.

## KANSAS PUBLIC UTILITIES COMMISSION.

Railroad Appraisal of June 30, 1911.

## INDEX TO TABLES.

*Appraisal of Union Pacific Railroad Company's Property in Kansas.*

- TABLE No. 1....Cost to reproduce new, per mile, of each section and the state system.
- TABLE No. 2....Present physical value, per mile, of each section and the state system.
- TABLE No. 3....Cost to reproduce new and present physical value of the state system.
- TABLE No. 4....Cost to reproduce new and present physical value, per mile, of each item, for the state system.
- TABLE No. 5....SECTION 1, KANSAS CITY TO TOPEKA. Cost to reproduce new and present physical value of road items.
- TABLE No. 6....SECTION 2, TOPEKA TO JUNCTION CITY. Cost to reproduce new and present physical value of road items.
- TABLE No. 7....SECTION 3, JUNCTION CITY TO ELLSWORTH. Cost to reproduce new and present physical value of road items.
- TABLE No. 8....SECTION 4, ELLSWORTH TO ELLIS. Cost to reproduce new and present physical value of road items.
- TABLE No. 9....SECTION 5, ELLIS TO OAKLEY. Cost to reproduce new and present physical value of road items.
- TABLE No. 10....SECTION 6, OAKLEY TO KANSAS-COLORADO STATE LINE. Cost to reproduce new and present physical value of road items.
- TABLE No. 11....SECTION 7, LAWRENCE TO LEAVENWORTH. Cost to reproduce new and present physical value of road items.
- TABLE No. 12....SECTION 8, LEAVENWORTH TO ONAGA. Cost to reproduce new and present physical value of road items.
- TABLE No. 13....SECTION 9, ONAGA TO MILTONVALE. Cost to reproduce new and present physical value of road items.
- TABLE No. 14....SECTION 10, MENOKEN TO MARYSVILLE. Cost to reproduce new and present physical value of road items.
- TABLE No. 15....SECTION 11, MANHATTAN TO KANSAS-NEBRASKA LINE. Cost to reproduce new and present physical value of road items.
- TABLE No. 16....SECTION 12, JUNCTION CITY TO CONCORDIA; LAWRENCEBURG TO BELLEVILLE. Cost to reproduce new and present physical value of road items.
- TABLE No. 17....SECTION 13, SOLOMON TO БЕЛОIT. Cost to reproduce new and present physical value of road items.
- TABLE No. 18....SECTION 14, SALINA TO PLAINVILLE. Cost to reproduce new and present physical value of road items.
- TABLE No. 19....SECTION 15, PLAINVILLE TO OAKLEY. Cost to reproduce new and present physical value of road items.
- TABLE No. 20....SECTION 16, SALINA TO MCPHERSON. Cost to reproduce new and present physical value of road items.

**UNION PACIFIC RAILROAD COMPANY,**  
OWNER AND OPERATING COMPANY.

TABLE No. 1. Cost to reproduce new, per mile, the physical property of the Union Pacific Railroad Company in Kansas.

## ORIGINAL COST OF RIGHT OF WAY.

The treatment accorded to land values in any appraisal of railway property affects materially the ultimate result.

In the appraisal of "the cost to reproduce new," the value of the land must be determined by estimating what would be the cost to secure the right of way and station grounds by the usual method, assuming that all surrounding conditions are as they exist at the date of appraisal, but that the railway land is vacant and in the possession of outside parties.

There are a number of factors that enter into the value of an existing railway right of way, two that are peculiar to this class of property being continuity and strategic location. Very often a narrow strip of land that could be used for no other purpose has an extremely high value for railway purposes, due to the fact that it is the only available route, whereas otherwise it would be valueless, although it may have cost the railway company practically nothing.

Again, an entrance into the heart of a city obtained when the city was small may have become of almost inestimable value to the operating railway, as for instance, the terminal property of the Illinois Central Railway in Chicago.

Appraisals are used for many purposes: to control the issue of bonds and stock, for taxation, for rate making, for purposes of sale, for economic studies of maintenance, etc.

The value of the property will vary for each of these different purposes, and for a proper determination of these values the original cost, as well as the cost to reproduce new, and a number of other factors must be determined.

Whether a public utility is entitled to a return upon the increase in the value of land, or as commonly expressed, the unearned increment, is a much mooted question.

In the case of the Illinois Central Railway Terminal in Chicago, cited above, the increase in the land value alone would justify any rate that has ever been or ever will be charged by that company, if the same were based upon the cost to purchase that property to-day.

The quasi-public character of a transportation company is due partially to its right of eminent domain, and the argument is made that the company is entitled to merely the cost of procuring its right of way and station grounds when the appraisal is made as a basis for determining what is a fair and reasonable rate of return upon the investment.

Without entering upon an extended discussion of this question, a table showing the original cost of the right of way of the Union Pacific Railroad Company is attached, it being the intention to furnish as much data as possible that may be required to assist in solving the problems to which this appraisal may be applied.

This original cost was obtained from the records in each county through which the lines of the Union Pacific railroad pass.

## REPORT OF WORK OF ENGINEERING DEPARTMENT ON ELECTRIC SERVICE AND RATES.

By F. H. HANSON, *Electrical Engineer.*

In accordance with the provisions of section 33, chapter 238, Laws of 1911, two appeals have been made to the Commission to adjust rates for electric service, where the city council and management of the electric company were unable to agree as to what was a proper and just rate. The problem in each case was the determination of the cost of service and establishment of a rate which would distribute the total cost equitably and without discrimination between the various consumers. The total cost consists of a large number of items, which fall under some one of the following heads.

1. Operating expense: (a) Generation; (b) transmission; (c) distribution; (d) commercial; (e) general.
2. Taxes.
3. Depreciation.
4. Profits.

These expenses were determined by an examination of the books and property and by making a valuation of the plant. A complete inventory of all the material and apparatus used in furnishing service was made, paying especial attention to age, condition and other features which would influence the value. The cost new in place was estimated item by item. In order to arrive at the value of each item in its present condition, the value of this item as scrap was subtracted from the cost new. This gave the depreciable value of that item, viz.; that value which will entirely disappear during the life of the equipment. From tables giving the average life of various parts of the plant, which are varied to suit local conditions, and the age of these parts, the amount of depreciation was calculated.

The difference between cost new and depreciation gives the present value. The depreciation may be calculated by straight-line or sinking-fund methods. Both assume that such a sum should be set aside yearly in a fund that will accumulate to a sum equal to replace the item at the end of its useful life. The straight-line basis does not consider interest on these yearly deposits, while the sinking-fund method does. Since the fund and the present value of the item together should always equal the cost new, the present value may be obtained by taking the difference between the cost new and the assumed accumulated fund. In addition to the items of the inventory, consideration was given to engineering, supervision, interest during construction, contingencies, etc., in arriving at the cost new and present value of the tangible property. As a basis for rates in addition to the present value of the physical property, an allowance of 10 to 12 per cent of the yearly gross revenues was made for working capital. This item covers stores and supplies and cash on hand. An allowance was also made for going-concern value.

## COST OF SERVICE.

In order to make a just rate to various classes of consumers it was necessary to know the cost of the electricity at the switchboard, the cost of distribution, the cost of reading the meters and of bookkeeping and collection, cost of general supervision, etc.; also the number of kilowatt hours sold. By knowing these costs it is possible to compute how much each class of consumers cost the company, or, conversely, what each consumer should pay the company for the service received.

With this in mind, vouchers showing the items of expense were examined and the amounts distributed to the accounts in which they properly belonged. This was necessary because the books had not been kept in a manner suitable for the determination of the actual costs. This was also difficult because considerable time had elapsed since the expenditures were made, and the conditions under which they were made were not known. Where two utilities were operated jointly, a certain amount of expense was incurred for the benefit of both. This expense was apportioned to each service in the same ratio as the cost was incurred. Taxes, depreciation and profits were the items which depend upon the value of the plant.

The depreciation per year was determined by dividing the depreciable values of the property by the average life of the plant. The average life of an electric plant is about 17 years, thus making 5.9 per cent of the rate of depreciation on the depreciable property, or 5.4 per cent on the total physical value, with no interest accumulations. With the fund drawing  $2\frac{1}{2}$  per cent interest, 4% per cent of cost new of the plant would suffice.

Profits to the company should be such as will induce investors to develop the electric utility business. Consideration must here be given to the efficiency of the management, since to allow the same percentage profit to the poorly managed plant as to the efficiently managed one would be a hardship upon the consumers of the poorer plant and unjust to the owners of the efficiently operated plant. The service must also be considered as a factor in determining the per cent of profit allowable. However, to allow a less profit to the plant furnishing poor service tends to make it impossible to improve the service. The better method is to require the management of all plants to maintain the same standard service, and thereby eliminate the consideration of the service as a factor of the rate of return. Another factor for consideration is the over-investment in a plant of larger capacity than is necessary to supply the demand of the consumer.

## METHOD OF DETERMINING THE PROPER RATE.

A study of the cost of electricity and conditions under which it is produced shows that a large investment is necessary to meet the requirements, and that a large part of equipment representing this investment is idle most of the time. Due to the simultaneous demands of the lighting consumers between dusk and nine o'clock in the evening, there develops what is called the "peak load." This peak load determines the capacity of the apparatus, and therefore the investment. Interest on this investment, taxes, many general expenses, insurance, ageing and loss of value of equipment and many other expenses remain the same per day

whether the plant is operated five or twenty-four hours. Therefore, every electric-light company tries to secure a power load for the hours when there is no demand for electricity for lighting purposes. In this way the total output is increased and the cost per kilowatt hour is lowered. The long-hour user, therefore, costs less per kilowatt hour than does the short-hour user. The equitable distribution of the cost requires that the expenses be divided into output costs and demand costs. The rate must include both costs, and may be arranged in several ways. One is a demand charge depending on the maximum demand of each consumer, plus a flat charge per kilowatt hour for all current used. Another and more common method is to make a graduated scale depending on the hours' use of a part of the total connected load. The total expenses depending on the demand are determined per day for one kilowatt of demand. If the consumer uses one kilowatt for one hour per day, the total demand cost for the day must be charged to the one kilowatt hour used. If the demand of one kilowatt is used two hours the total demand charge should be divided between two kilowatt hours, thus making the charge less for each unit. If used ten hours, the demand charge per kilowatt hour will be one-tenth of that if used one hour. To this variable charge, depending on the hours' use, is added the output cost of one kilowatt hour. This gives a rate which produces the same revenue and which is far more equitable to all concerned than a flat rate or a sliding-scale rate depending on the kilowatt hours used. Either of the last two rates can only be averages and results in the case of the flat rate—that the long-hour consumer pays some of the cost incurred by the short-hour user; while the sliding scale, depending on the kilowatt hours used, makes the consumer with a small demand pay some of the cost of the consumer having a large demand.

The determination of proper rates for any public service requires a large amount of work by the governing body. Numerous important decisions on cost, operating and accounting methods must be made. In order that these decisions be correct under the many varying conditions, a large amount of reliable information must be always available. In order that the best results be obtained, the following conditions should exist:

*First.* The public utilities should install a uniform classification of accounts, approved by the Commission, and annual reports should be filed with the Commission for their use. Also, the books, vouchers, records and accounts of the company should be open at all times to the Commission or their representatives for investigation.

*Second.* The Commission should compile from these annual reports and other available sources such information as will aid them in the determination of the questions arising under commission regulation and control.

*Third.* A standard of service should be fixed by the Commission for each class of utility. The companies should be required to maintain this standard, under penalty to be fixed by the Commission. The Commission should provide the equipment necessary for their engineers to check up the service from time to time, and thus insure to the public the service to which they are properly entitled.

## TELEPHONE SERVICE.

In the early part of July the Missouri & Kansas Telephone Company consolidated their plant with the plant of The Independent Telephone Company in Topeka. Shortly thereafter the service became poorer than that previously furnished, and numerous complaints were made to the Commission regarding it. In an effort to see that the company gave attention to these complaints conferences were had with the heads of the various departments of the telephone company regarding the correction of the faults. Observations were made of the manner in which the work was done, and special secret tests were made on several occasions. A split-second stop watch was used in making the tests at various telephones around town. The results showed the time required for central to answer, the time for party to answer, the number of times incorrect connections were made, and kind of transmission, supervision, etc. These results were compared to the following standard of telephone service:

Eighty-five per cent of all calls should be answered by the operator in 5 seconds or less, 98 per cent of all calls in 10 seconds or less, and the average time to answer all calls about 4 seconds. The operator should ring the called party every 30 seconds until answered or the calling party discontinues the call. The transmission should be good and there should be no noises on the line.

On September 4 a secret test was made, in which 64 per cent of all the calls were answered in 5 seconds or less, and the average time to answer all calls was 5.4 seconds. On September 24 a second test showed 73 per cent of all calls answered in 5 seconds or less and the average time to answer was 4.4 seconds. Similar improvement was noted in the wrong numbers and supervision given. On November 18 a third test was made, in which 81 per cent of all calls were answered in 5 seconds or less, and the average time to answer all calls was 4.3 seconds. Transmission, supervision and other features of telephone service also showed an equal improvement.

## COMPLAINTS AND APPLICATIONS.

SUMMARY OF CASES FILED WITH PUBLIC UTILITIES  
COMMISSION

BETWEEN MAY 22, 1911, AND NOVEMBER 30, 1912.

NOTE.—In the description of each case, the first line contains docket number and name of complainant; second line, respondent and subject matter; third line, disposition and date.

1. J. H. Sherman.  
A. T. & S. F. *et al.* Transit rules.  
Withdrawn before service. May 28, 1911.
2. Felix Brocher.  
Union Pacific R. R. More passenger coaches on trains out of Manhattan  
Complaint dropped. June 8, 1911.
3. M. H. Hawkinson.  
Missouri Pacific Ry. Depot and agent at Lowe.  
Box-car depot and caretaker installed. March 25, 1912.
4. Louis Hoel.  
Mo. Pac. Ry. Station and sidetrack between Jamestown and Randall.  
Sidetrack constructed. October 8, 1912.
5. E. M. Cliff.  
Mo. Pac. and Union Pac. Connecting track, Frankfort.  
Denied. August 11, 1911.
6. Z. W. Carothers.  
A. T. & S. F. Ry. Co. Depot and better station facilities at Carvel.  
Depot built. October 1, 1911.
7. J. W. O'Connor.  
M. K. & T. Ry. Co. Track and depot facilities at Hartford.  
Adjusted. July 29, 1912.
8. Salina Produce Co.  
A. T. & S. F. Ry. Co. Rate on corn, Belvue to Atchison, misrouted.  
Adjusted. July 7, 1911.
10. Girard Mut. Tel. Co.  
M. K. & T. Ry. Co., Home Telephone Co., George W. Crawford. Joint  
telephone service.  
Adjusted. November 21, 1911.
11. Western States Portland Cement Co.  
C. R. I. & P. and Missouri Pacific Ry. Cos. Joint rates on cement.  
Adjusted. June 17, 1911.
12. Ash Grove Lime and Portland Cement Co.  
M. K. & T. and C. R. I. & P. Ry. Cos. Joint rates on cement.  
Adjusted. June 14, 1911.
13. Dr. J. S. Crumblin.  
A. T. & S. F. *et al.* Better service in handling egg, butter and milk  
shipments.  
Adjusted.
14. Jas. A. Sprague.  
C. R. I. & P. Ry. Co. Better refrigerator service, Goodland.  
Adjusted. July 24, 1911.
15. G. F. Watt.  
Missouri Pacific Ry. Co. Better depot facilities at Glenloch.  
Dismissed, request complainant. July 11, 1911.
16. Salina Produce Co.  
Missouri Pacific Ry. Co. Minimum weight of 40,000 pounds on grain.  
regardless of size of car furnished.  
Adjusted. July 7, 1911.
17. Hutchinson Interurban Ry. Co.  
— — — Bond issue, \$65,000.  
Authorized. June 13, 1911.
18. Manhattan City & Interurban Ry.  
— — — Stock issue, \$200,000.  
Authorized. June 13, 1911.

19. Missouri Pacific Ry. Co.  
Bond issue, \$10,000,000; gold notes, \$20,000,000.  
Authorized. June 13, 1911.
21. E. F. Town.  
C. R. I. & P. Ry. Co. Agent at Natrona.  
Denied. September 8, 1911.
22. H. T. Bentley.  
Missouri Pacific Ry. Co. Telephone in depot at Haven.  
Adjusted. July 20, 1911.
23. C. W. Reeder.  
St. Joseph & G. I. Ry. Better toilet facilities at Wathena station.  
Adjusted. July 24, 1911.
24. D. P. Simpson.  
Missouri Pacific Ry. Co. Better stockyards facilities at Cawker City.  
Adjusted. July 26, 1911.
27. Nickerson Telephone Co.  
Stock dividend, \$5000.  
Denied. July 18, 1911.
28. Lyons Milling Co.  
Missouri Pacific Ry. Co. Transit rule on shipments moving out of line.  
Adjusted. July 5, 1911.
29. L. E. Johnson.  
C. R. I. & P. Ry. Co. Agent at Waldron.  
Dismissed at request of complainant. August 8, 1911.
30. Ray H. Beals.  
A. T. & S. F. Ry. Co. *et al.* Better telephone service at St. John.  
Adjusted. July 5, 1911.
31. Robt. McInnes.  
Missouri Pacific Ry. Co. Telegraph service at Langley.  
Adjusted. July 24, 1911.
45. Fleischman Yeast Co.  
M. K. & T. Ry. Co. Better passenger-train service between Coffeyville and Parsons.  
Adjusted. July 25, 1911.
46. A. T. & S. F. Ry.  
Ratification, lease of Garden City, Gulf & Northern Railway.  
Approved. June 29, 1911.
48. P. J. Norton.  
A. T. & S. F. Ry. Co. Reasonable switching charge, Cottonwood Falls.  
Rate of 15 cents per ton, minimum \$5. fixed. October 4, 1911.
49. Westmoreland Tel. Co.  
Bond issue, \$15,000.  
Authorized. July 11, 1911.
50. I. C. Rush.  
Mo. Pac., U. P., R. I. Telephone in depots, Clifton.  
Adjusted. August 30, 1911.
53. Bugmus Bros.  
U. P. R. R. Co. Refrigerator-car service, Beverly.  
Adjusted. September 21, 1911.
54. State of Kansas.  
A. T. & S. F. *et al.* Jobbers' rates as maximum in Kansas.  
Pending.
58. Wyandotte Co. Tel. Co.  
Bond issue, \$10,000.  
Authorized. August 8, 1911.
59. Morrill Mutual Tel. Co.  
Bond issue, \$4000.  
Authorized. August 8, 1911.
60. Chas. A. Lauman.  
U. P. R. R. Co. New depot, Ogden.  
Pending.
61. Ashgrove Lime & Port. Cement Co. *et al.*  
A. T. & S. F. Ry. *et al.* Lower joint rates on cement.  
Pending.
66. Wichita Trans. Bureau.  
A. T. & S. F. Ry., C. R. I. & P. Ry., K. C. M. & O. Ry., Mo. Pac. Ry.  
Lower rates on cider apples.  
Mileage scale ordered. September 8, 1911.
67. Salina Produce Co.  
C. R. I. & P. Ry. Co. Minimum weight charges on grain.  
Adjusted. August 12, 1911.
68. B. F. Kaufman.  
Missouri Pacific Ry. Co. Improved waiting-room conditions, Nickerson.  
Adjusted. August 11, 1911.

69. J. Wiswell & Co.  
M. K. & T. Ry. Co. Depot and agent, Sherman City.  
Agent ordered. June 21, 1912.
70. Harry Carle.  
Scranton Tel. Co. *et al.* Joint telephone service.  
Adjusted. October 23, 1912.
72. Frank Caprez.  
Union Pacific R. R. Water at stockyards, Waldo.  
Pending.
73. Benton & Smith.  
C. B. & Q. R. R. Co. Better train service on Oberlin branch.  
Adjusted. September 21, 1911.
74. B. C. Culp.  
A. T. & S. F. Ry. Co. Better passenger service, De Soto.  
Adjusted. August 21, 1911.
75. Hauck's Elevator Co.  
Mo. Pac. and A. T. & S. F. Ry. Connecting track, Valley Falls.  
Track built by agreement. May 18, 1911.
80. Union Traction Co.  
Bond issue, \$350,000.  
Authorized. October 3, 1911.
81. *In re* seed wheat.  
Free transportation of seed wheat to Western Kansas.  
Granted. August 9, 1911.
83. J. E. Lucas.  
Missouri Pacific Ry. and A. T. & S. F. Ry. Co. Telephones in depots.  
Dighton and Shields.  
Adjusted. August 17, 1911.
84. Arthur Black.  
Missouri Pacific Ry. Telephone in depot, Wilsey.  
Adjusted. February 16, 1911.

Denied. July 10, 1912.
70. Union Pacific R. R. Co.  
Change in transit rules on grain, etc.  
Granted. July 23, 1912.
71. Missouri Pacific Ry. Co.  
Raise in jobbers' rates, Hutchinson to various points.  
Denied pending decision in jobbers' rate case. July 10, 1912.
72. K. C. M. & O. Ry. Co.  
Other grain rates on alfalfa meal.  
Granted.
73. Union Pacific R. R. Co.  
Reduction classification rate on mohair.  
Granted. July 9, 1912.
74. A. T. & S. F. Ry. Co.  
Certificate fixing minimum weight on corn.
75. Union Pacific R. R. Co.  
Cancellation rate on oil tanks.  
Granted. September 17, 1912.
76. A. T. & S. F. Ry. Co.  
Certificate fixing minimum on car wheat, Eskridge to Horton.  
Capacity car ordered fixed. July 9, 1912.
77. Union Pacific R. R. Co.  
Change in rating on bones, etc.  
Granted. July 23, 1912.
78. M. K. & T. Ry. Co.  
Certificate fixing charges on several cars of oil from Chanute to Iola.  
4-cent rate fixed. July 23, 1912.
79. A. T. & S. F. Ry. Co.  
Certificate fixing minimum on car wheat from Castleton to Hutchinson.  
Capacity car ordered fixed. July 23, 1912.
80. A. T. & S. F. Ry. Co.  
Reduction sand rates, Arkansas City, etc., to Liberty, etc.  
Granted. July 26, 1912.
81. American Express Co.  
Reduction express rates between various points.  
Granted. August 5, 1912.
82. Arkansas Valley Interurban R. R. Co.  
Excursion fares from various points to Halstead.  
Granted. August 7, 1912.
83. Union Pacific R. R. Co.  
Reduction rates on stone, Junction City to Chapman, etc.  
Granted. August 10, 1912.
84. M. K. & T. Ry. Co.  
Advance coal rates southeast Kansas mines to points Downing to Junction City, inclusive.  
Denied. October 3, 1912.
85. A. T. & S. F. Ry. Co.  
Certificate fixing minimum on six cars wheat, McIntosh and McLouth, etc., to Leavenworth.  
Capacity car ordered fixed. August 13, 1912.
86. Arkansas Valley Interurban R. R. Co.  
Excursion fares from various points to Walnut Grove.  
Granted. August 16, 1912; August 26, 1912; August 31, 1912.
87. M. K. & T. Ry. Co.  
Absorption \$2 switching charges on oil at Iola.  
Granted. August 20, 1912.
88. Union Pacific R. R. Co.  
Reduction vegetable rate, Topeka to various points.  
Granted.
89. A. T. & S. F. Ry. Co.  
Cancellation 45-cent rate on baskets, C. L., Leavenworth to Hutchinson, etc.  
Denied. September 23, 1912.
90. Union Pacific R. R. Co.  
Reduction jobbers' rates, Salina to northern Kansas points.  
Granted. August 26, 1912.
91. Union Pacific R. R. Co.  
Classification paper drinking cups.  
Granted. August 31, 1912.
92. Union Pacific R. R. Co.  
Stopping cars of scrap paper in transit, \$5 charge.  
Granted. August 31, 1912.

93. Union Pacific R. R. Co.  
Stopping cars of sulphur solution in transit, \$5 charge.  
Granted. August 31, 1912.
94. Union Pacific R. R. Co.  
Class D rating on silos.  
Granted. September 4, 1912.
95. Union Pacific R. R. Co.  
Change in rule covering mixture of grain.  
Granted September 17, 1912.
96. Union Pacific R. R. Co.  
Change in rule covering rating on P. H. P. in Ped. cars.  
Granted September 17, 1912.
97. Union Pacific R. R. Co.  
Change in classification rating on paper and paper articles.  
Granted September 17, 1912.
98. C. R. I. & P. Ry. Co.  
Certificate authorizing protection jobbers' rates from Anthony to McCrea, etc.  
Granted September 17, 1912.
99. Union Pacific R. R. Co.  
Protection Topeka-Atchison rate on H. H. goods, Lawrence to Topeka.  
Denied. September 4, 1912.
100. Union Pacific R. R. Co.  
Rate on brick and drain tile, one cent higher than brick rates.  
Granted. September 17, 1912.
101. Union Pacific R. R. Co.  
Change in rule 238 G. F. O., Clr. 1085, "weight-carrying capacity" for "capacity."  
Granted. September 17, 1912.
102. Union Pacific R. R. Co.  
Reduction classification rating on pulp-board boxes.  
Granted. September 17, 1912.
103. A. T. & S. F. Ry. Co.  
Experimental rate, \$1 per ton on sugar beets, C. L., Emporia to Garden City.  
Granted. August 3, 1912.
104. Union Pacific R. R. Co.  
Third-class rating on crackers, cakes, etc.  
Granted. September 17, 1912.
105. A. T. & S. F. Ry. Co.  
Reduction of rate on drain tile, Humboldt to Oswego, to 5½ cents.  
Granted. September 18, 1912.
106. United States Express Co.  
Correction merchandise rate between Anthony and Lorraine.  
Granted. September 17, 1912.
107. A. T. & S. F. Ry. Co.  
Advance rate on steel rails, Atchison and Leavenworth to various points.  
Denied. September 23, 1912.
108. A. T. & S. F. Ry. Co.  
Correction of mileage, El Dorado to Wichita.  
Granted. September 23, 1912.
109. Union Pacific R. R. Co.  
Reduction of rate on lump coal, Leavenworth to Onaga, \$1.10 to \$1.01 per ton.  
Granted. September 21, 1912.
110. Arkansas Valley Interurban R. R. Co.  
Excursion fares, various points to Wichita.  
Granted. September 21, 1912.
111. A. T. & S. F. Ry. Co.  
Reduction rates on sugar, L. C. L., Emporia to Benedict, etc.  
Granted. September 24, 1912.
112. A. T. & S. F. Ry. Co.  
Correction of rates on cement, southeast Kansas points to Fort Scott, 7½ cents.  
Granted. October 3, 1912.
113. A. T. & S. F. Ry. Co. *et al.*  
Certificate fixing rates on cull and windfall apples, various points to Wichita, etc.  
Granted. October 8, 1912.
114. Union Pacific R. R. Co.  
Wheat rates on grain products or cereal food mixtures.  
Granted. October 3, 1912.

115. A. T. & S. F. Ry. Co. *et al.*  
Modification "returned goods rule."  
Pending.
116. C. R. I. & P. Ry. Co.  
Cancellation of rates on hay and straw via Frisco Co.  
Granted. November 7, 1912.
117. A. V. I. Route.  
Special rate, chartered passenger cars, Newton to First street, Newton.  
Granted. October 3, 1912.
118. Union Pacific R. R. Co.  
Estimated weights on asphalt in liquid form, etc.  
Granted. October 3, 1912.
119. C. R. I. & P. Ry. Co.  
Change in rule covering liquids in tank cars.  
Granted. October 3, 1912.
120. A. V. I. Route.  
Excursion fares, various points to Wichita.  
Granted October 4, 1912.
121. A. T. & S. F. Ry. Co.  
Reduction of rate on crushed stone, C. L., Florence to McPherson.  
Granted October 9, 1912.
122. A. T. & S. F. Ry. Co.  
Emergency rate of 3½ cents on stone, C. L., Moline, etc., to Hutchinson.  
Granted. October 8, 1912.
123. A. V. I. Route.  
Excursion fares, various points to Newton.  
Granted. October 17, 1912.
124. M. K. & T. Ry. Co.  
Absorption switching at Iola, oil shipments from Coffeyville.  
See No. 87. October 17, 1912.
125. Union Pacific R. R. Co.  
Cancellation of 9-cent rate on canned goods, Topeka to Leavenworth.  
Granted. October 22, 1912.
126. A. T. & S. F. Ry. Co.  
Certificate fixing rate on cider, C. L., Oskaloosa to Topeka.  
7-cent rate fixed. October 14, 1912.
127. Union Pacific R. R. Co.  
Certificate fixing rate on two cars of vinegar, Lawrence to Topeka.  
7-cent rate fixed. October 31, 1912.
128. Union Pacific R. R. Co.  
7-cent rate on vinegar between Topeka and Missouri river points.  
Granted. October 31, 1912.
129. Missouri Pacific Ry. Co.  
Establish 7-cent rate on cement between Iola and Gas and Fort Scott.  
Withdrawn. November 19, 1912.
130. C. R. I. & P. Ry. Co.  
Modification of minimum-weight rules on grain and grain products.  
Pending.
131. Union Pacific R. R. Co.  
Weighing of grain and seeds, allowance for grain doors.  
Pending.
132. Union Pacific and C. R. I. & P. Co.  
Minimum of 40,000 on malt.  
Pending.
133. Union Pacific R. R. Co.  
Milling-in-transit rules on stock food.  
Pending.
134. Missouri Pacific Ry. Co.  
Cancellation of rate on lamp chimneys, Peru to Emporia.  
Pending.
135. A. T. & S. F. Ry. Co.  
Rates to and from points on L. & T. Ry.  
Pending.
136. Union Pacific R. R. Co.  
Reweighing of coal at request of consignee.  
Pending.

APPLICATION OF PUBLIC UTILITIES TO CHANGE RATES,  
RULES AND REGULATIONS.

MAY 22, 1911 TO NOVEMBER 30, 1912.

U. R. A. No.

1. Kinsley Tel. Co. Kinsley.  
Advance rate from \$1 to \$1.25 for individual telephones.  
Granted. September 28, 1911.
2. Garnett Light & Fuel Co. Garnett.  
Advance rate on natural gas from 25 cents to 27 cents.  
Application withdrawn. December 1, 1911
3. McLouth Tel. Co. McLouth.  
Advance in rural telephone rates from \$1 to \$1.25.  
Withdrawn. March 13, 1912.
4. Wichita Natural Gas Co. Wichita, Winfield, Wellington, Newton, Hutchinson.  
Advance natural gas rates for special purposes. Pending.
5. Parker Tel. Co. Parker.  
Advance switching rates from \$2 to \$3.  
Granted. June 18, 1912.
6. Home Tel. & Electric Co. Highland.  
Advance exchange rates.  
Denied. July 28, 1912.
7. Hanover Tel. Co. Hanover, Barnes.  
Joint rate for telephone service  
Withdrawn. September 26, 1912.
8. Liberal Tel. Co. Liberal.  
Advance rates for business and residence telephone service.  
Adjusted. May 1, 1912.
9. Coats & S. W. Tel. Co. Coats.  
Readjust telephone rates for stockholders and nonstockholders.  
Granted. April 17, 1912.
10. Kansas Natural Gas Co. Various.  
Advance rates on natural gas.  
Pending.
11. Missouri & Kansas Tel. Co. Grantville.  
Establish exchange and toll rates.  
\$1 rate for Grantville, 50-cent flat rate Topeka, and 10-cent  
toll rate fixed. April 26, 1912.
12. Farmers & Merchants Tel. Co. Norton.  
Uniform rate \$1 stockholders and nonstockholders.  
Granted. April 17, 1912.
13. Preston Mutual Tel. Co. Preston.  
Establish \$1.50 business rate, \$1.25 individual residence rate, all  
others \$1.  
Granted. May 23, 1912.
14. Logan Co. Tel. Co. *et al.* Between points Oakley to Wa Keeney.  
Advance toll rates.  
Pending.
15. Moran Tel. Co. Moran.  
Bronson Mutual Tel. Co. Bronson.  
Establish toll rate of 5 cents per message.  
Granted. June 18, 1912
16. Arlington Tel. Co. Arlington.  
Establish switching rate of 50 cents.  
Granted. June 18, 1912.
17. Farmers Tel. Co. Quinter.  
Uniform rates for stockholders and nonstockholders.  
Granted. May 22, 1912.
18. Greeley Tel. Co. Greeley.  
Establish \$6 switching rate.  
Pending.
19. Langdon Tel. Co. Langdon.  
Advance switching rate to 50 cents per month.  
35-cent rate fixed. June 18, 1912.
20. Potter Tel. Co. Potter.  
Advance rates for rural lines from \$1 to \$1.25.  
Denied. July 23, 1912.
21. Farmers Union Tel. Co. Iuka.  
Uniform rate stockholders and nonstockholders.  
Granted. May 23, 1912.
22. Formosa Mutual Tel. Co. Formosa.  
\$12 rate for stockholders and nonstockholders.  
Granted. May 14, 1912.

23. Liberal Tel. Co. Liberal.  
Rule holding rural line responsible for rentals.  
Granted. May 14, 1912.
24. Missouri & Kansas Tel. Co. Atchison.  
Readjust exchange rates.  
Granted. July 29, 1912.
25. Reading Tel. Co. Reading.  
Advance switching rate to 35 cents per month.  
Granted. June 5, 1912.
26. Baldwin Tel. Co. Baldwin.  
Rural rates between Baldwin and inland towns.  
Pending.
27. Coats & S. W. Tel. Co. Coats.  
Reduce toll rates to nonsubscribers to 15 cents.  
Granted. May 23, 1912.
28. Osborne Tel. Co. Between Osborne and Cheyenne.  
Establish 5-cent message rate and 10-cent rental.  
Granted. July 9, 1912.
29. Missouri & Kansas Tel. Co. Topeka.  
Application to readjust toll rates out of Topeka.  
Granted. June 5, 1912.
30. Oskaloosa Tel. Co. Oskaloosa.  
Modify exchange rates.  
Granted. June 25, 1912.
31. Missouri & Kansas Tel. Co. Ottawa.  
Advance business and residence rates.  
Pending.
32. Geuda Tel. Co. Geuda Springs.  
Readjust rates.  
Granted. September 9, 1912.
33. Blue Hills Tel. Co. Glen Elder.  
Readjust exchange rates.  
Granted. September 3, 1912.
34. Westphalia Tel. Co. Westphalia.  
Establish switching rate of 25 cents.  
Granted. September 10, 1912.
35. Chase CoSp. Tel. Co. Chase.  
Toll rate of 10 cents to near-by towns.  
Granted. October 21, 1912.
36. Scranton Tel. Co. Scranton.  
25-cent switching rate for all rural subscribers.  
Granted. September 30, 1912.
37. Missouri & Kansas Tel. Co. Between Overbrook and Lawrence.  
Establish 20-cent toll rates.  
Granted. September 3, 1912.
38. Greensburg Tel. Co. Greensburg.  
Cancel combination rate.  
Granted. September 18, 1912.
39. Arkansas Valley Tel. Co. Great Bend.  
Approval of schedule of toll rates.  
Temporary order granted. September 30, 1912.
40. Montgomery Co. Mutual Tel. Co. Wayside.  
Increase exchange rates.  
Pending.
41. Labette Gas Co. Chetopa, Edna, Bartlett.  
Advance in price of natural gas, 25 cents to 38 cents and 53 cents.  
Granted. October 14, 1912.
42. Dighton Tel. Co. Between Dighton and Healy.  
15-cent toll rate.  
Pending.
43. Fredonia Gas Co. Fredonia.  
Advance rate for natural gas from 18 cents to 25 cents.  
Granted. October 31, 1912.
44. Missouri & Kansas Tel. Co. Topeka.  
Approval schedule of rates.  
Approved. October 21, 1912.
45. Farmers Union Tel. Co. Iuka.  
Reduction switching rate 15 cents to 10 cents per message.  
Granted. October 21, 1912.
46. Caney Gas Co. Caney.  
Advance rate on natural gas from 18 cents to 25 cents.  
Pending.

47. **Cunningham Tel. Co. Cunningham.**  
Readjust rate schedule.  
Granted. November 26, 1912.
48. **Kansas City Long Distance Tel. Co. Various.**  
Night rate of \$1.80 per mille per year.  
Granted. November 1, 1912.
49. **Arkansas Valley Tel. Co. Larned and Burdett.**  
Reduce toll rate from 25 cents to 15 cents.  
Granted. November 1, 1912.
50. **Kansas City Long Distance Tel. Co. Between Kansas City and Edwards-ville.**  
Establish 10-cent toll rate.  
Granted. November 1, 1912.
51. **Burlington Tel. Co. Burlington.**  
Advance switching rate from \$3 to \$5.  
Pending.
52. **Western Union and Postal Telegraph Co's. Topeka.**  
Reduce certain telegraph rates.  
Granted. June 26, 1912.
53. **Missouri & Kansas Tel. Co. Topeka.**  
Establish private branch exchange rates.  
Granted. Nov. 26, 1912.
54. **Farmers Union Tel. Co. Iuka.**  
**Pratt Tel. Co. Pratt**  
Establish 15-cent message rate between Pratt and Iuka.  
Pending.
55. **Home Tel. & Elec. Co. Highland.**  
Increase telephone exchange rates.  
Pending.
56. **Arkansas Valley Tel. Co. Great Bend.**  
Establish schedule of rates to points on new line.  
Pending.
57. **Home Tel. Co. Scottsville.**  
Uniform rates for stockholders and nonstockholders.  
Pending.

## IMPORTANT DECISIONS.

DOCKET No. 179.

[Submitted January 8, 1912. Decided February 5, 1912.]

*In re* Application F. E. Workman.

The duty rests upon the applicant to show that public convenience and necessity will be subserved by permitting another utility to enter the same field.

This action was brought by F. E. Workman, of Parsons, Kan., seeking a certificate of public convenience and necessity authorizing him to build and operate an electric light and power plant in the city of Parsons.

The case was heard by the Commission on January 8, 1912, at which time representatives of the Parsons Railway & Light Company appeared and protested against the Commission granting the proposed certificate on the ground that the present company is amply able to meet the needs of the people of that community.

Under the provisions of section 31 of chapter 238 of the Session Laws of 1911, no common carrier or public utility, governed by the provisions of the act, is permitted to transact business in the state of Kansas until a certificate has been obtained from the Public Utilities Commission that public convenience will be promoted by the transaction of such business.

The duty rests upon the applicant to show that public convenience and necessity will be subserved by permitting another utility to enter the same field.

Practically the only reasons assigned for permitting another electric light company to engage in business in Parsons were that the Parsons Railway & Light Company had notified the city authorities that after the expiration of its present franchise on July 1, 1912, it would expect a higher scale of rates and that five or six individual plants had been installed by large users of electricity. A number of witnesses, including the mayor and a commissioner of the city of Parsons, testified that the service rendered by the present company is reasonably satisfactory. In fact it was pretty conclusively shown that the plant of the Parsons Railway & Light Company is adequate for all present and prospective needs of Parsons.

The obvious purpose of the legislature in enacting section 31 of chapter 238 of the Session Laws of 1911, commonly known as the public utilities law, was to prevent a duplication of utilities where one is rendering reasonably satisfactory service. This question was the subject of discussion by the Wisconsin Railroad Commission in the La Crosse Gas & Electric Company case, 2 Wis. R. R. Rep. page 5, where the commission well said:

"Duplication of such plants is a waste of capital, whenever the service can be adequately furnished by one plant. It necessarily means that interest and maintenance must be earned on a much greater, if not twice

as great an investment, and that the actual cost of operation is likely to be relatively higher. Competition in this service, therefore, usually means a bitter struggle and low rates until one of the contestants is forced out of the field, when the rates are raised to the old level, if not above it, or to a combination or understanding of some sort between them which also ultimately results in higher rates. In this way it often happens that the means which were thought to be preventative of onerous conditions are impotent. In fact, active and continuous competition between the public utility corporations furnishing the same service to the same locality seems to be out of the question. This has been shown by experience. Such competition also is contrary to the very nature of things. Two distinct and separate corporations are not likely to remain separate very long after it becomes clear that the services rendered by both can be more cheaply and more effectively furnished by only one of them."

The same question was before the supreme court of Massachusetts in the case of *Weld v. Gas and Electric Light Commissioners*, 197 Mass. 556, on appeal from a decision of the commission. The court said:

"The fundamental principles, relied on by the petitioner as applicable to corporations of this general commonwealth in regard to gas and electric lighting companies, and the facts of this case give considerations very different from those which induce the decisions in many of the cases above cited. In the first place, in reference to this department of public service, we have adopted, in this state, legislative regulation and control as our reliance against the evil effects of monopoly, rather than competitive action between two or more corporations, where such competition will greatly increase the aggregate cost of supplying the needs of the public, and perhaps cause other serious inconveniences. Under the R. L. c. 121, Pars. 1, 5, 6, 8, 14, 15, 26, 34 and 35 the board of gas and electric light commissioners are given supervision and control over all companies furnishing gas or electricity to the public for lighting, and, among other things, they may order, under Par. 34, any reduction in the price of gas or electric light, or improvement in the quality thereof. Under Pars. 8 and 9 the courts have jurisdiction to enforce all lawful orders of the board, and all provisions of the law relative to such companies. The state, through the regularly constituted authorities, has taken complete control of these corporations so far as it is necessary to prevent the abuse of monopoly. Our statutes are founded on the assumption that, to have two or more competing companies running lines of gas pipe and conduits for electric lines through the same streets would often greatly increase the necessary cost of furnishing light as well as cause great inconvenience to the public and to individuals from unnecessary digging up of the streets from time to time, and the interference with pavements, street railway tracks, water pipes and other structures. In reference to some kinds of public service and under some conditions, it is thought by many that regulation by the state is better than competition."

In the application of the *Niagara Falls Lighting Company* before the Public Service Commission of New York, Second District, in 1909, the commission said:

"The policy of this commission in cases where one lighting company seeks to enter a field already occupied by another requires that the applicant shall show that the company already serving the community is not doing so adequately and efficiently and that its failures are such that they can not well be corrected by the exercise of the regulative power of the commission. Good service may now be obtained at reasonable prices in less expensive ways than by unnecessary duplication of plants and the public interest does not demand that capital invested in good faith in the public service should be destroyed or impaired without good reasons to be shown affirmatively."

The whole controversy in Parsons seems to be one over rates. In the opinion of the Commission, the present laws give a city of the first class sufficient power to regulate the rates of an electric light and power company. Express provision has been made in section 33 of the public utilities law for an appeal to this Commission by either the utility or ten aggrieved taxpayers in case any right, privilege or franchise granted, or ordinance or resolution or part of any ordinance or resolution adopted by any municipal council or commission is unreasonable, or against public policy, or detrimental to the best interests of the city, or contrary to law.

From the showing made, it does not appear that public convenience would be promoted by permitting another light and power company to engage in business in Parsons.

IT IS THEREFORE ORDERED that the application of F. E. Workman be denied.

Dated at Topeka, Kan., this 5th day of February, 1912.

---

DOCKET No. 160.

[Submitted January 24, 1912. Decided February 27, 1912.]

City of Kinsley v. The Kinsley Automatic Telephone Company, a Corporation.

1. It is contended that the Kinsley Automatic Telephone Company is situated principally within the city of Kinsley and principally operated for the benefit of the people of that city, and not subject to control by this commission. Measured by every standard fixed by the legislature, the Kinsley Automatic Telephone Company can not fairly be said to be situated principally within the city of Kinsley nor even serving the people of that city principally. It therefore follows that the company is under the commission's jurisdiction.
2. There is no grant of power in any of the laws of this state authorizing cities of the third class to regulate the rates of telegraph or telephone companies not situated and operated wholly or principally within the city or principally operated for the benefit of such city or its people.

This action was instituted by the city attorney of Kinsley for the purpose of setting aside a previous order of this commission under date of September 28, 1911, permitting The Kinsley Automatic Telephone Company to advance the rate for individual line telephone service from \$1 to \$1.25 per month.

A hearing was held at Kinsley on January 24, 1912.

The contention of the city attorney is that The Kinsley Automatic Telephone Company is under the control of the local authorities and not subject to regulation by the Public Utilities Commission.

The jurisdiction of this commission is conferred by section 3 of the Session Laws of 1911, which reads:

"The term 'public utility,' as used in this act, shall be construed to mean every corporation, company, individual, association or persons, their trustees, lessees or receivers, that now or hereafter may own, control, operate or manage, except for private use, any equipment, plant, generating machinery, or any part thereof, for the transmission of telephone messages or for the transmission of telegraph messages in or through

any part of the state, or the conveyance of oil and gas through pipe lines in or through any part of the state, except pipe lines less than 15 miles in length and not operated in connection with or for the general commercial supply of gas or oil, or for the operation of any trolley lines, street, electrical or motor railway doing business in any county within the state, also all dining-car companies doing business within the state, and all companies for the production, transmission, delivery or furnishing of heat, light, water or power; provided, that this act shall not refer to or include mutual telephone companies. That mutual telephone companies, for the purposes of this act, shall be understood to mean any cooperative telephone company operating only for the mutual benefit of its subscribers without profit other than in the service received. Nothing in this act shall apply to any public utility in this state owned and operated by any municipality. The power and authority to control and regulate all public utilities and common carriers situated and operated wholly or principally within any city or principally operated for the benefit of such city or its people shall be vested exclusively in such city, subject only to the right to apply for relief to said Public Utilities Commission as hereinafter provided in section 33 of this act."

The last sentence of the section places a limitation upon the power of the commission. It is contended that The Kinsley Automatic Telephone Company is situated principally within the city of Kinsley, and is operated principally for the benefit of the people of that city. Upon the original hearing before the commission on the company's application to advance rates, copy of applicant's sworn statement to the State Tax Commission was introduced in evidence.

This statement shows that the telephone company is operating not only in the city of Kinsley but in five townships other than Kinsley township in Edwards county, and also in Ford, Hodgeman, Kiowa and Pawnee counties, with toll line service in Kinsley, Wayne and Belpre townships, with a total mileage of 104 miles in Kinsley and Kinsley township and 313 miles outside. The assessed value of property within the city and township of Kinsley (the two being given together) is \$5880, outside \$7430. The evidence also disclosed the fact that the company had on January 24, 1912, 305 telephones in Kinsley and 298 outside the city, with eight toll stations in other towns and villages. It was also shown that the Kinsley Automatic Telephone Company has joint contracts with several other telephone companies for service throughout the state and among the states.

Measured by every standard fixed by the legislature, The Kinsley Automatic Telephone Company can not fairly be said to be situated principally within the city of Kinsley, nor even serving the people of that city principally. It therefore follows that the company is under the commission's jurisdiction.

The next question is whether a city of the third class has been given authority and power by the legislature to regulate the rates of telephone companies, which regulation would be binding upon the Public Utilities Commission. It seems that on the 15th day of March, 1909, the mayor and council of the city of Kinsley passed an ordinance permitting The Kinsley Automatic Telephone Company to construct, extend, maintain and operate an electric telephone plant in the city of Kinsley, and fixed the maximum rate for business telephones at \$2 per month and residence telephones at \$1 per month.

It is contended that the order of this commission permitting the telephone company to advance its rate was without force or effect, and the commission is asked to disclaim jurisdiction within the city because the maximum rate of \$1 fixed by the city in the franchise makes a binding contract between the city and the telephone company.

The only specific authority granted cities of the third class by the legislature to regulate telephone companies is found in sections 753, 1561 and 1793 of the General Statutes of 1909. Section 753 reads as follows:

"Before any person, firm or corporation shall have the right to enter upon the streets, alleys, public parks and grounds of any city of the second or third class in the state of Kansas for the purpose of piping the same for gas, heat, light, water or for the construction of any railways, street railways, sewerage system, telephones, or for any other purpose whatsoever, such person, firm or corporation must first procure the passage of an ordinance by the mayor and councilmen of such city granting unto such person, firm or corporation such right or rights, and in which said ordinance shall be defined fully and at length the terms upon which said right is conceded."

By the provisions of section 1561 a city of the third class is given authority to levy and collect a license tax from telephone companies.

Section 1700 confers upon telephone companies all the rights and powers and liabilities imposed upon telegraph companies by the general laws of the state, and that portion of the general laws relating to the government of telegraph companies by cities of the third class is to be found in section 1793, which reads:

"The council of any city or trustees of any incorporated town or village through which the line of any telegraph corporation is to pass, may, by ordinance or otherwise, specify where the posts, piers or abutments shall be located, the kind of posts that shall be used, the height at which the wires shall be run, and such company shall be governed by the regulation thus prescribed; and after the erection of said telegraph lines, the council of any city or the trustees of any incorporated town or village shall have power to direct any alteration in the location or erection of said posts, piers or abutments; and also in the height at which the wires shall run, having first given such company or its agents opportunity to be heard in regard to such alterations."

There is no grant of power in any of the laws of this state authorizing cities of the third class to regulate the rates of telegraph or telephone companies not situated and operated wholly or principally within the city or principally operated for the benefit of such city or its people.

Section 33 of chapter 238 of the Session Laws of 1911 provides that every municipal council or commission shall have the power and authority to contract with any public utility or common carrier, situated and operated wholly or principally within any city, or principally operated for the benefit of such city or its people, by ordinance or resolution duly considered and regularly adopted, as to the quality and character of each kind of product or service to be furnished or rendered by any public utility or common carrier, and the maximum rates and charges to be paid therefor, and the terms and conditions upon which such public utility or common carrier may occupy the streets, highways and other public property within such municipality.

The supreme court of our state has held in a number of cases that a city can not exercise a power to regulate unless express authority is granted by the legislature. In the case of *City of Leavenworth v. Norton*, 1 Kan. 405 (Dass. ed.), the court said:

"All powers not expressly granted by the charter of a municipal corporation, or necessary to carry out these powers, held to be denied. It can take nothing by implication.

"The city of Leavenworth is a municipal corporation created by act of the legislature, and its powers are strictly limited and controlled by the provisions of the charter."

"Municipal corporations are creations of law, and can exercise only powers conferred by law, and take none by implication. *City of Leavenworth v. Rankin*, 2 Kan. 357."

This question was before the court in the *Pryor* case, where Iola, then a city of the third class, attempted to regulate the price of gas by ordinance. Chief Justice MARTIN, delivering the opinion of the court, said:

"In certain cases the state may fix and regulate the prices of commodities and the compensation for services, but this is a sovereign power, which may not be delegated to cities or subordinate subdivisions of the state, except in express terms or by necessary implication. No such power is expressly conferred upon cities of the third class, and we do not think the right can be implied from any express provision, unless possibly that in the grant of consent to any person or corporation so to use the streets and public grounds of the city a condition might be imposed as to the maximum rates to be charged." *In re Pryor*, 55 Kan. 728.

In *City of St. Louis v. Telephone Co.*, 96 Mo. 623, it was held that neither under its authority to regulate the use of streets, nor the power to license, tax and regulate various professions and businesses, nor the general welfare clause permitting the passage of all such ordinances not inconsistent with the provisions of the charter or the laws of the state as may be expedient in maintaining the peace, good government, health and welfare of the city, its trade, commerce, and manufactures, can the city of St. Louis regulate by ordinance the tariff of charges of a telephone company. In the opinion the court says:

"We are at a loss to see what this power to regulate the use of the streets has to do with the power to fix telephone charges. The power to regulate the charges for telephone service is neither included in nor incident to the power to regulate the use of streets, and the ordinance can not be upheld on any such grounds."

Telephone companies have been given the right to set their poles, wires and other fixtures along, upon and across any of the public roads, streets and waters of the state in such manner as not to incommode the public in the use of such roads, streets and waters. The cities can only designate the location.

In the case of *Telephone Company v. City of Concordia*, 81 Kan. 514, the court said:

"Under existing statutes the right to build a telephone line in and over streets and highways is directly granted by the state, and the mayor and council of a city are powerless to prevent such use. The council has the authority to provide by ordinance reasonable rules regulating the use of the streets and alleys for that purpose by defining where and in what manner a telephone company shall erect and maintain its fixtures."

Prior to the passage of the public utilities law, no power had been conferred upon any municipal or state body to regulate the rates of a telephone company. With the enactment of that law, authority was specifically given to the Public Utilities Commission to regulate the rates and service of telephone companies not situated wholly or principally within a city, or principally operated for the benefit of such city or its people.

No authority having been given to cities of the third class to regulate the rates of telephone companies not situated and operated wholly or principally within the city or principally operated for the benefit of such city or its people, it is held that that portion of the ordinance of 1909 which attempted to regulate the rates of The Kinsley Automatic Telephone Company is inoperative and void.

IT IS THEREFORE ORDERED that the complaint be dismissed, this 27th day of February, 1912.

---

DOCKET No. 257.

[Submitted April 16, 1912. Decided April 24, 1912.]

The Whitewater Telephone Company, *vs.* The Missouri Pacific Railway Company.

#### OPINION AND ORDER.

The complainant alleges that the respondent fails and neglects to maintain adequate telephone connections between its stations at Brainerd and McLain and the public telephone exchanges operated by The Whitewater Telephone Company in the aforesaid towns, and prays for an order of this Commission requiring the said railway company to comply with chapter 136 of the Session Laws of 1911.

The answer of the respondent company alleges that public convenience does not require telephone service in its depots at Brainerd and McLain, while an amended answer raises the question that there are no public telephone exchanges in the said towns.

The case was heard by the Commission on the 16th day of April, 1912. The evidence shows that some months ago the manager of The Whitewater Telephone Company notified the railway officials that a telephone rental of \$1.35 per month would be charged for each station. This the railway company declined to pay, and advised the telephone people that service could be discontinued. The evidence further shows that the telephones have been in constant use by all parties, including the agents of the railway company.

The real purpose of the complaint is to secure payment for the telephone service rendered.

In our opinion, this Commission can not order the railway company to install telephones in its depots at Brainerd and McLain, for the reason that adequate telephone service is already accorded the people of those villages.

Section 1 of chapter 136 of the Session Laws of 1911 reads:

"That every railway company, express company and telegraph company doing business in this state shall furnish reasonably adequate tele-

phone connections between its offices, buildings, and grounds, and the public telephone exchanges operated in the towns where the same are located."

This statute requires the railway companies to maintain reasonably adequate telephone service, and neither the railway company nor the telephone company can discontinue such service without the consent of this Commission. If any telephonic service is inadequate, or unreasonably or unjustly discriminatory, then complaint can be made to this Commission under the provisions of section 2 of the chapter referred to above.

In the judgment of the Commission, railway companies are required to pay for telephone service, the same as other subscribers, unless other arrangements are authorized by the commission.

The complaint is therefore dismissed, this 24th day of April, 1912.

---

DOCKET No. 352.

[Submitted June 18, 1912. Decided June 25, 1912.]

**J. G. Condon, vs. The Hiawatha Mutual Telephone Company.**

**OPINION AND ORDER.**

The Commission is of the opinion that the company should establish one rate for stockholders and nonstockholders who receive like and contemporaneous service. Any return to stockholders upon their investment should be paid in the way of dividends rather than in preferential rates.

The complainant in this case is a farmer, residing west of the city of Hiawatha, Kan., and is a subscriber to the service of the Hiawatha Mutual Telephone Company, which is an incorporated company, engaged in renting telephones to the public generally and transmitting toll messages, with both local and long-distance toll connections.

The complainant alleges that the respondent company is charging stock-holding subscribers on rural lines a rate of 50 cents per month, while those subscribers who do not own stock in the company are compelled to pay \$1 per month for the same service. It is contended that this constitutes an unjust discrimination against the non-stockholder.

The respondent company was not represented at the hearing before the Commission on June 18, but in its answer said company attempted to justify the difference in rates for the stockholders and nonstockholders on the theory that the stockholder was responsible for the obligations of the company. From information available it seems that the company has something like 500 subscribers who are not stockholders, and about 200 stock-holding subscribers.

The Commission is of the opinion that the company should establish one rate for stockholders and nonstockholders who receive like and contemporaneous service. Any return to stockholders upon their investment should be paid in the way of dividends, rather than in preferential rates.

IT IS THEREFORE ORDERED that the said The Hiawatha Mutual Telephone Company be, and it is hereby, directed to cease and desist from the practice of charging stockholders discriminatory rates.

Dated at Topeka, Kan., this 25th day of June, 1912.

DOCKET No. 411.

[Decided July 30, 1912.]

The Garden City Telephone, Light and Manufacturing Company, vs. The City of Garden City.

## REPORT AND ORDER.

The city of Garden City is a city of the second class and is situated in Finney county, Kansas.

The Garden City Telephone, Light & Manufacturing Company is a corporation organized and existing under and by virtue of the laws of the state of Colorado, and is engaged in operating a telephone system and an electric-light system in the city of Garden City. The telephone system and electric-light plant are operated by the same management, and wherever possible, with the same employees, buildings, office fixtures, tools and appliances. The rates charged for electricity for lighting purposes are as follows:

1 kilowatt hour to 75 kilowatt hours.....	15 cents.
76 kilowatt hours to 150 kilowatt hours.....	13 "
151 kilowatt hours and above.....	10 "

There are 129 lights on flat rates.

There is a special rate of 8 cents per kilowatt hour to the Windsor hotel. Employees of the light company receive a flat rate of \$1 per month. Other than to employees, the minimum rate with metered service is \$1.50 per month.

There are 65 street lamps in operation, for which the company receives from the city \$1,689.05 per annum.

On the 6th day of June, 1912, the city, by its mayor and council, passed the following ordinance:

## ORDINANCE No. 97, N. S.

AN ORDINANCE providing for the fixing of rates and charges for the furnishing and supplying of electric light and electric current to the inhabitants of the city of Garden City, Finney county, Kansas, by any person or persons, firm, company or corporation, and providing penalties for the violation of any of the provisions of said ordinance.

*Be it ordained by the mayor and councilmen of the city of Garden City.*

SECTION 1. Hereafter no person, persons, firm, company or corporation within the city of Garden City who shall own, control or operate any works or plant for the purpose of furnishing and supplying electric light or electric current to the inhabitants of said city shall charge for or collect from any of the inhabitants of said city who shall subscribe for use or consume any such electric light or electric current any greater sum or sums of money for such light or current than as specified and designated in sections 2 and 3 of this ordinance.

SEC. 2. The meter rate for electric current for lighting purposes shall not be more than ten cents per kilowatt hour; provided, that when less than ten kilowatt hours per month be used by any consumer a charge of not more than one dollar shall be made.

SEC. 3. The meter rate for current for power purposes shall not be more than five cents per kilowatt hour; provided, that when less than twenty kilowatt hours per month be used by any consumer, a charge of not more than one dollar shall be made.

SEC. 4. All electric meters used, shall be read monthly, and such reading furnished to each consumer, showing the amount or quantity of cur-

rent for light or power purposes, furnished and supplied to each such consumer or subscriber, for the preceding month, showing the last previous reading and the present reading.

SEC. 5. Each and every person, persons, firm, company or corporation, their agents, servants or employees, so furnishing light and power to the inhabitants of said city who violate any of the provisions of this ordinance shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not exceeding fifty dollars, and shall be imprisoned until such fine and the costs of prosecution are fully paid.

SEC. 6. All ordinances and parts of ordinances in conflict with this ordinance are hereby repealed.

SEC. 7. This ordinance shall take effect and be in force and effect from and after its passage and publication in the *Garden City Herald*.

[SEAL.]

WALTER HARVEY, *Mayor*.

ATTEST: J. F. CROCKER, *City Clerk*.

On the 17th day of June, 1912, the Garden City Telephone, Light and Manufacturing Company filed its complaint with the Public Utilities Commission of the state of Kansas, asking that if this Commission find that the provisions of said ordinance are unreasonable and against public welfare, or has reason to believe that the same is contrary to law, it will within ten days thereafter recommend and advise said city to make such changes in the ordinance as may be necessary to meet the objections set forth in the complaint and protect public interest and remove any unreasonable provisions therefrom. The complaint alleges that on the 31st day of December, 1911, there had been invested by said complainant in the said light plant the sum of \$60,973.83, and further alleges that the said ordinance is unreasonable in this, that the rates therein fixed are so low that the complainant is and will be unable to furnish electric current to the inhabitants of said city and maintain its electric plant in its present efficiency without great loss, damage and expense, and that said ordinance is against public policy, contrary to law and against the best interests of the city.

Due notice was given, and hearing was had at Garden City on the 5th day of July, 1912, before the Public Utilities Commission, there being present George Plumb and John T. White, commissioners; John Marshall, attorney for the Public Utilities Commission; W. R. Hopkins, attorney for the city of Garden City, and Edgar Foster, attorney for the Garden City Telephone, Light and Manufacturing Company. A number of witnesses were sworn and evidence introduced.

The books of the company show that the electric-light plant has cost the company \$60,973.83. The electric-light plant was purchased by the complainant some five or six years ago from another company, who had prior to that time been operating same in Garden City. The sum of \$60,973.83 includes the sum of \$5785 paid to parties interested in the plant at the time of such purchase, but for which the complainant company received no value.

The Commission caused a valuation and appraisement of the property of the complainant to be made by its engineer, Carl C. Witt. From his report the Commission finds that it would cost \$51,051 to reproduce the complainant's lighting plant in the city of Garden City, new; that the present condition of the lighting plant is 87.7 per cent of its value new,

making the present value of the plant, \$44,772. From this report the Commission finds that an entirely new plant ample to furnish electricity for Garden City at the present time and for a number of years in the future will cost \$40,000. There is evidence to show that such plant can be built for \$37,000. After taking into consideration all the conditions and circumstances surrounding the electric-light plant situated at Garden City, Kan., including intangible values as well as the value of the physical plant, the Commission finds that the value of the plant now owned and operated by the complainant for the benefit of Garden City in furnishing electricity is \$45,000. The Commission finds that the total receipts of the complainant company for the calendar year 1911 were \$14,400.20. The total operating expenses, not including depreciation, were \$7897.01, leaving an income of \$7502.99. The Commission finds that from this sum there should be deducted a further sum of \$2000 to be set aside to replace the depreciation in the plant. This leaves a net profit, after deducting depreciation, of \$5502.99. This gives a return of 12.2 per cent on \$45,000, and 13.75 per cent on \$40,000, and 10.7 per cent on \$51,051.

Under present conditions a minimum amount of electricity is used in Garden City. With reasonable rates and an agreeable business management, there is every reason to believe that the use of electricity in Garden City will be greatly increased in the future. There is no reason to believe that such use will be decreased. There is difficulty in ascertaining the net revenue to be received by the complainant company under any system of meter rates, because of the mixture of flat rates and meter rates now in operation in Garden City. The Commission is of the opinion that for lighting a rate of 11 cents per kilowatt hour, with a minimum rate of \$1.25 per month, and for power a rate of 6½ cents per kilowatt hour for the first 100 kilowatt hours, 5½ cents per kilowatt hour for the second 100 kilowatt hours, and 4½ cents per kilowatt hour for all above 200 kilowatt hours, with a minimum rate of \$1.25 per month, with a discount of 10 per cent on all bills if paid on or before the 10th day of the month succeeding the close of the month during which electricity was furnished, will be reasonable.

The Commission is of the opinion that \$2000 is a proper sum for annual depreciation, and that these rates will yield to the complainant company, after paying all operating expenses and setting aside \$2000 for depreciation, the sum of \$3502.99 annually. This sum is 8.75 per cent of \$40,000; 6.9 per cent of \$51,051, and 7.7 per cent of \$45,000, which rate, in the opinion of the Commission, is ample return upon the fair value of that part of the complainant's plant in Garden City used for the production of electricity for lighting and power.

IT IS THEREFORE BY THE COMMISSION ADVISED AND RECOMMENDED that the respondent city revise and change said ordinance so as to provide for rates as follows:

A rate of 11 cents per kilowatt hour for electric lights, with a minimum rate of \$1.25 per month;

A rate for power of 6½ cents per kilowatt hour for the first 100 kilowatt hours, 5½ cents per kilowatt hour for the second 100 kilowatt hours,

and 4½ cents per kilowatt hour for all above 200 kilowatt hours, with a minimum rate of \$1.25 per month;

And that all bills paid on or before the 10th day of the month succeeding that during which electricity has been furnished there shall be allowed 10 per cent discount.

---

DOCKET No. 417.

[Submitted November 1, 1912. Decided November 8, 1912.]

*In re* complaint of the Parsons Railway and Light Company, complaining of certain ordinances, orders and resolutions, rates and regulations, attempted to be made and enforced against the Parsons Railway and Light Company by the City of Parsons, Kan.

#### STATEMENT OF THE CASE.

This is a proceeding under section 33 of chapter 238 of the Laws of 1911, commonly known as the public utilities law.

The city of Parsons is a city of the second class, situated in Labette county, Kansas.

The complainant, the Parsons Railway and Light Company, operates an electric-light and power plant in the city of Parsons and also operates a street-railway system in said city. Electricity for the operation of the electric-light and power plant and the street railway is generated by one plant.

Electricity is sold to the general public for commercial light and power, to the city for arc street lighting and to the railway for power purposes.

On the 17th day of June, 1912, the board of commissioners of the city of Parsons passed an ordinance providing, among other things, that—

“The maximum rate for electric current furnished and supplied to any persons, firm, company, association, business, institution or corporation, residing or doing business in said city of Parsons, Kan., by the Parsons Railway and Light Company shall be and is hereby fixed at not to exceed six cents per kilowatt for light, heat and power, or for any other purpose, for a period of five years from and after the first day of July, A. D. 1912.”

On the 21st day of June the Parsons Railway & Light Company filed its complaint with this Commission, asking—

“That this Commission shall find that the orders, resolutions, rates and regulations herein complained of are unreasonable and against public welfare and contrary to law and confiscatory, and that this Commission advise and recommend such changes in said ordinances, and resolutions, rates and regulations as it may find necessary to protect this complainant and allow it to make a sufficient income to pay operating expenses and provide for maintenance and depreciation and to pay a reasonable interest upon its actual investment, and to make such other and further orders and provisions as may seem to this Commission to be just and proper in the premises.”

Notice was given as required by law, and a hearing was had at the city of Parsons on the 8th and 9th days of August, 1912, at which a large amount of evidence was heard. Oral argument was then made by counsel for the light company and for the city. Briefs were afterwards filed. After the filing of the briefs the parties again orally argued the matter

before the Commission. After the last argument the light company submitted additional statements and figures explanatory of the difference in the operating expenses of the company between the years ending January 15, 1911, and January 15, 1912.

The Commission heard all the evidence offered by either the light plant or the city. George C. Shaad, professor of electrical engineering at the Kansas State University, and W. J. Hagenah, public utility statistician of the city of Chicago, testified for the light plant. B. F. Eyer, professor of electrical engineering of the Kansas State Agricultural College, testified for the city. C. C. Witt and Fred H. Hanson, engineers for the Commission, made an examination of and report concerning the property of the light plant.

#### VALUATION.

Prof. George C. Shaad, for the company, and Prof. B. F. Eyer, for the city, each made an appraisement and valuation of the plant in controversy, and each testified concerning that valuation. In addition to these valuations, C. C. Witt, the Commission's engineer, also made a valuation. It appears that the present company purchased this plant from the Parsons Electric Light and Power Company in 1908, for which the present company, Parsons Railway and Light Company, paid \$90,000. This was largely in excess of the then value of the plant. Mr. Emanuel, the president of the company, testified on this hearing that the plant when purchased was worth about \$50,000. On the hearing of an application of F. E. Workman for a certificate authorizing him to build an electric-light plant in the city of Parsons, Mr. Emanuel testified that the plant at the time of this purchase was worth about \$30,000. Mr. Emanuel also testified that between \$70,000 and \$80,000 had been put into the plant since its purchase. According to the testimony of Mr. Emanuel, the plant has cost its owners somewhere between \$150,000 and \$160,000. This is greatly in excess of the present value of the plant. The original value was somewhere from \$30,000 to \$50,000. To this has been added from \$70,000 to \$80,000, making a total present value of the plant, according to Mr. Emanuel, from \$100,000 to \$180,000.

Mr. Shaad, professor of electrical engineering at the Kansas State University, was employed by the company to make a valuation and appraisement of the plant and classification of the operating expenses of the company. Professor Shaad testified that it will cost \$129,279.82 to reproduce that part of the physical property of the present plant devoted to the production and distribution of electricity, including that used by the street-railway company, and that the present value of this plant is \$110,594.11. He divided the present value between the commercial, arc and railway systems as follows:

To the commercial system .....	\$73,000.00
To the arc system .....	17,531.04
To the railway system .....	20,062.47

To the present value of the plant apportioned to commercial and arc light uses, \$90,531.64, Professor Shaad adds \$17,919.94 as going-concern value and \$2000 for working capital.

Mr. Eyer, professor of electrical engineering at the Kansas State

Agricultural College, was employed by the city of Parsons to make a valuation and appraisal of the property and classification of the operating expenses of the company. According to his testimony, it will cost \$115,811.16 to reproduce the present plant new. The Commission's engineer, Carl C. Witt, also made a valuation and appraisal of this plant and assisted in making a classification of the operating expenses. According to Mr. Witt, it will cost \$126,120 to reproduce the present plant new. This includes all that part of the plant necessary to deliver electricity to the several customers of the plant. The present value of the plant is shown by Mr. Witt to be \$110,567. This does not include going concern, working capital, nor any other intangible value.

#### OPERATING EXPENSES.

The principal contest in this matter is over operating expenses. Mr. Hagenah, Professor Shaad, Professor Eyer and Mr. Emanuel each testified on this subject, and Mr. Witt made certain examinations into this matter. There is practical unanimity as to the amount of operating expenses for the year ending June 30, 1912, the difficulty being over the propriety of certain items of such expenses, some items being included by Professor Shaad and Mr. Hagenah and excluded by Professor Eyer. According to Mr. Hagenah and Professor Shaad, the operating expenses for the light plant for the year ending June 30, 1912, were \$36,867.65. This is divided as follows:

#### Power generation:

Labor .....	\$2,667.57
Fuel .....	13,412.85
Lubricants and waste .....	783.69
Miscellaneous power-plant supplies and expense.....	634.33
Maintenance of steam and electrical equipment.....	2,377.03
Maintenance of gas engine .....	389.90
Maintenance of buildings .....	101.84
Water .....	1,352.25

Total .....	\$21,719.01
-------------	-------------

#### Distribution:

Meter department .....	\$929.90
Maintenance of lines .....	2,134.40
Stable expense .....	188.75
Arc-lamp expense .....	241.23

Total .....	\$3,491.28
-------------	------------

#### General expense:

Officers' salaries .....	\$4,654.55
Officers' expense .....	611.50
Clerical salaries .....	1,586.50
Miscellaneous office supplies and expense.....	2,036.22
Rent .....	799.00
Commission expense .....	474.77
Taxes .....	1,494.82

Total .....	\$11,557.36
-------------	-------------

According to Professor Eyer, the operating expenses as shown by the books and vouchers for the year ending June 30, 1912, were \$34,665.95, divided as follows:

		Gross Expense.
Generation:		
Labor .....		\$2,667.50
Fuel .....		13,305.65
Lubricants and waste .....		817.43
Power-plant supplies .....		638.29
Maintenance of steam equipment .....		1,610.69
Maintenance of motors .....		877.73
Maintenance of electrical equipment .....		44.99
Maintenance of buildings .....		101.34
Water .....		1,409.21
Total .....		\$20,472.83
Distribution:		
Meter department .....		\$926.90
Maintenance of lines .....		2,116.02
Maintenance of meters .....		18.38
Maintenance of arcs.....		236.27
Total .....		\$3,298.57
General:		
Officers' salaries .....		\$1,845.68
Officers' expenses .....		1,204.79
Clerks .....		1,527.47
Office supplies .....		2,563.63
Horse .....		288.16
Rent, Tax, Insurance: Rent, \$745.29; tax, \$1109.97; insurance, \$185 .....		2,032.99
Public utility .....		1,331.85
Total .....		\$10,894.57

These items Professor Eyer reduces as follows:

Of the \$20,472.83 for generating electricity, 25 per cent is properly apportionable to the street-car system, making the total, excluding the cost of generating the electricity for the street-car system, \$15,354.63.

The general expenses he reduces by deducting \$2975.88 from the total thereof, as being that part of the general expense that should be apportioned to generating electricity for the street railway, leaving \$7918.69 as the proper proportion of general expenses to charge to the electric-light plant so far as concerns electricity for commercial lighting and power, and electricity for arc lights is concerned.

Professor Eyer divides the electrical plant between that part of the plant used and necessary for the production of electricity for light and power and for the street railway.

From the examination made by the Commission's engineer, C. C. Witt, it appears that the operating expenses for the year ending June 30, 1912, were as follows:

Generation:	
Labor, operating .....	\$2,667.57
Fuel .....	13,412.85
Lubricants and waste, miscellaneous power-plant supplies and expenses .....	634.38
Steam and electrical equipment .....	2,377.03
Gas engine .....	378.30
Building .....	101.34
Water .....	1,352.25
Total .....	\$21,707.41

Distribution:	
Meter department .....	\$926.90
Maintenance of lines .....	2,134.40
Arc lamps, expense .....	241.23
Total .....	<u>\$3,302.53</u>
General expense:	
Officers' salaries .....	\$2,254.55
Officers' expense .....	240.50
Clerks, office labor .....	1,586.50
Miscellaneous office supplies .....	266.09
Rent .....	799.00
Stable .....	183.05
Commission expense, one-tenth of .....	145.22
Total .....	<u>\$32,484.84</u>

Mr. Witt found that the gross operating expenses for the lighting department for the year ending January 15, 1911, were \$23,426.26, and that the same expenses for the year ending January 15, 1912, were \$35,849.13, an increase of \$12,422.87. The explanations given by the light plant concerning this difference in the operating expenses for these years are not, in the opinion of the Commission, sufficient to warrant any change in the conclusions tentatively reached by the Commission previous to receiving such explanations.

F. H. Hanson, electrical engineer for the Commission, made an examination of the evidence, and makes a statement concerning the operating expenses of the company and its division between the railway and arc light and commercial systems, which statement is substantially the same as that submitted by Mr. Hagenah, and is as follows:

	Total.	Railway.	Arc.	Commercial.
Generation:				
Labor .....	\$2,667.57			
Fuel .....	13,412.85			
Lubricants and waste .....	788.69			
Miscellaneous power-plant supplies and expenses .....	634.38			
Water .....	1,352.25			
Maintenance steam and electric engines .....	2,377.03			
Maintenance gas engine .....	378.03			
Maintenance building .....	101.34			
Totals .....	<u>\$21,707.41</u>	<u>\$5,130.17</u>	<u>\$4,274.97</u>	<u>\$12,302.27</u>
Distribution:				
Meter department .....	\$926.90			\$926.90
Maintenance of lines .....	2,134.40		\$597.64	1,536.76
Arc lamps .....	241.23		241.23	
Stable .....	188.05		52.65	135.40
Totals .....	<u>\$3,490.58</u>		<u>\$891.52</u>	<u>\$2,599.06</u>
General:				
Officers' salaries .....	\$2,254.55	\$338.19	\$112.72	\$1,803.64
Officers' expense .....	240.50	36.08	12.03	192.39
Clerks and office labor .....	1,586.50	237.96	79.32	1,269.22
Miscellaneous office supplies .....	2,266.09	339.91	113.31	1,812.87

Commission expense .....	363.05		83.58	279.47
Totals .....	<u>\$7,509.69</u>	<u>\$1,071.99</u>	<u>\$440.91</u>	<u>\$5,996.79</u>
Taxes .....	1,494.82	275.00	254.14	965.68
Grand totals .....	<u>\$34,202.50</u>	<u>\$6,476.86</u>	<u>\$5,861.54</u>	<u>\$21,868.80</u>

## THE DIVISION OF OPERATING EXPENSES.

Of the total cost of power-generation expense of \$21,719.01 Mr. Hagenah apportions a total sum of \$5358.31 as the cost of generating the electricity sold to the street railway. Of the cost of distributing the electricity Mr. Hagenah apportions all to the lighting system, including both the commercial and arc lights, except \$94.38 stable expense, which he apportions to the railway.

Of the general expense Mr. Hagenah apportions one-third of the officers' salaries, officers' expenses and rent to the street railway; one-tenth of the clerical salaries and miscellaneous office supplies and expense to the street railway; two-thirds of the officers' salaries, officers' expenses and rent, and nine-tenths of clerical salaries and miscellaneous office expenses and supplies, and all of the Commission expenses and taxes, to the lighting department. The Commission expense he finds to be \$1424.31, which he distributes over a period of three years, making an expense of \$474.77 in each year. This Commission expense is the expense attending the hearing before the Public Utilities Commission, resisting the granting of a certificate to F. E. Workman to do business as a public utility in the city of Parsons. This makes a total of \$2277.41 distributed to the railway system and \$9379.95 to the lighting system out of the total general expenses of \$11,657.36.

F. H. Hanson, electrical engineer of the Public Utilities Commission, apportions the operating expenses of the company as follows:

## Generation expenses:

- \$5,130.17 to the railway.
- 1,274.97 to the arc-lighting system.
- 12,302.27 to commercial electricity.

## The distribution expenses he apportions:

- \$891.52 to the arc-lighting system.
- 2,599.06 to the commercial system.

None to the railway, because the railway receives its electricity at the switchboard in the plant.

## The general expenses he apportions:

- \$1,071.99 to the railway system.
- 440.91 to the arc lighting system.
- 5,996.79 to the commercial system.

Of the total tax of \$1494.82 he apportions \$275 to the railway system, \$254.14 to the arc-lighting system and \$965.68 to the commercial system, making a total of \$6477.16 to the railway system, \$5861.54 to the arc-lighting system and \$21,863.80 to the commercial system.

## REVENUES.

The evidence concerning the revenues of the company is practically unanimous for the year ending June 30, 1912. The revenue received from arc lighting in the city was \$7429.23 and from the commercial light and power \$29,586.55, making a total of the two items of \$37,015.78.

For the same period the company received from the street railway for electricity sold to it \$3685.50, making a total revenue for electricity from all sources of \$40,701.28.

From the examination made by Mr. Witt it appears that the total

revenue for the year ending January 15, 1911, was \$38,228.08, while the revenues for the year ending January 15, 1912, were \$39,441.16.

These revenues were obtained from the following rates: 6 cents per kilowatt hour for all commercial lighting, with varying rates for commercial power; \$5 per month for each arc light and 1½ cents per kilowatt hour from the street railway.

#### FINDINGS OF THE COMMISSION.

From the evidence before the Commission it appears that the value of the electrical plant of the Parsons Railway & Light Company, for rate making purposes, may properly be fixed at \$119,000, divided substantially as follows: \$106,000 for the present value of the physical property devoted to the production and distribution of electricity for commercial and arc-lighting purposes and for use by the street railway. The going-concern value of the plant may properly be fixed at \$13,000.

The Commission bases its findings concerning operating expenses on the figures made by F. H. Hanson, which are based on the statement submitted by Mr. Hagenah, and from the statement made by him deducts one-fourth of the general expenses, because the general expenses are incurred for the benefit of both the electric plant and the street-railway plant, the officers and office clerks performing service for both the electrical and street-railway systems at the same time. The amount thus deducted is \$1877.42.

From the examination of the books made by Mr. Witt it appears that the operating expenses for the year ending January 15, 1911, were \$23,462.26, while for the year ending January 15, 1912, the operating expenses were \$35,849.13—an increase in one year of \$12,422.87 in the operating expenses of this plant. This difference has not been satisfactorily explained. For the year ending January 15, 1911, the total revenues were \$38,228.08, and for the year ending January 15, 1912, such revenues were \$39,441.16—an increase of \$1213.08. For the same period the operating expenses increased \$12,422.87. This increase in the operating expenses in one year appears to the Commission to be unreasonable. The Commission therefore concludes that one-half of the \$12,422.87 should be deducted from the operating expenses. The amount so deducted is \$6211.43. The total operating expenses as shown by Mr. Hanson is \$34,202.50. From this should be deducted the \$1877.42 and \$6211.43, leaving \$26,113.65. To this should be added an amount for depreciation and an amount as a return on the investment, liability insurance, an amount to meet the increased price of fuel and another amount to meet the increase in office expenses at Parsons, upon the theory that the entire management of these properties should be at Parsons. These amounts, as found by the Commission, are as follows:

For depreciation, 4 per cent of \$106,000 or.....	\$4,240
Return on investment, 7 per cent of \$119,000, or .....	8,330
Liability insurance .....	637
Increase in the cost of fuel .....	2,683
Increase in office expenses .....	500
Making a total to be added of .....	16,390

Including this with the operating expenses, as found by the Commission, produces a total sum of \$42,503.65.

The revenues for the year ending June 30, 1912, derived from electricity sold for commercial purposes, from the arc-lighting system in the city and from the street railway were \$40,701.28 on the rates then in existence, which were 6 cents per kilowatt for commercial light, \$5 a month for each arc light, and 1½ cents per kilowatt hour for electricity furnished to the street railway. The electricity furnished for commercial lighting and power was alternating current, that for the street railway was direct current, and that for the arc-lighting system was alternating current.

For the year ending June 30, 1912, the company sold for commercial light and power 467,174 kilowatt hours, to the city for the arc lights 243,000 kilowatt hours, both of which were alternating current, and to the railway 243,800 kilowatt hours direct current.

The Commission is of the opinion, and therefore finds, that a proper maximum rate for electricity sold for lighting purposes to residences, flats, dwelling houses and rooming houses, including incidental use of appliances on lighting circuits, and passing through the same meter, will not exceed a charge of 10 cents per kilowatt hour for the first 20 kilowatt hours or less used per month; 7 cents per kilowatt hour for the next 40 kilowatt hours, and 4 cents per kilowatt hour for all current used in excess of 60 kilowatt hours per month; and that a proper maximum rate for electricity sold for all other lighting purposes will not exceed 10 cents per kilowatt hour for the first 50 kilowatt hours; 7 cents per kilowatt hour for the next 100 kilowatt hours, and 4 cents per kilowatt hour for all current used in excess of 150 kilowatt hours.

The minimum charge for lighting should be 75 cents per month.

The schedule of rates for power for five-horsepower demand and over should be:

	Cents per kw. hour.
For from 1 to 80 hours' use per month of demand.....	6.
81 to 90 hours' use per month of demand.....	5.5
91 to 100 hours' use per month of demand.....	5.27
101 to 110 hours' use per month of demand.....	4.97
111 to 120 hours' use per month of demand.....	4.72
121 to 130 hours' use per month of demand.....	4.52
131 to 140 hours' use per month of demand.....	4.34
141 to 150 hours' use per month of demand.....	4.19
151 to 160 hours' use per month of demand.....	4.06
161 to 170 hours' use per month of demand.....	3.97
171 to 180 hours' use per month of demand.....	3.9
181 to 190 hours' use per month of demand.....	3.84
191 to 200 hours' use per month of demand.....	3.80
201 to 210 hours' use per month of demand.....	3.75
211 to 220 hours' use per month of demand.....	3.71
221 to 230 hours' use per month of demand.....	3.67
231 to 240 hours' use per month of demand.....	3.62
241 to 250 hours' use per month of demand.....	3.58
251 to 260 hours' use per month of demand.....	3.54
261 to 270 hours' use per month of demand.....	3.50
271 to 280 hours' use per month of demand.....	3.46
281 to 290 hours' use per month of demand.....	3.42
291 to 300 hours' use per month of demand.....	3.38

The minimum charge shall be 50 cents per horsepower per month.

The hours' use per month of demand shall be determined in the following manner: Divide the number of kilowatt hours used per month by .6 of the rated horsepower of the connected load.

A discount of 10 per cent shall be allowed for all payments of all bills made on or before the 10th day of the month following the month for which the bill is incurred.

A proper rate for arc lights is \$70 a year for each light; and for the electricity sold to the street railway, 2.56 cents per kilowatt hour, measured by a direct-current meter.

These rates, on the amount of electricity sold for the year ending June 30, 1912, as estimated, will produce for commercial light and power about \$28,400; for arc lights, \$8330; for the street railway, \$6240—a total of \$42,970. The operating expenses, as found by the Commission, including depreciation and return on the investment, were \$42,503.65.

Nothing herein contained shall be held to prevent the Parsons Railway & Light Company from charging less than rates herein specified for any service herein named, providing that the same charge shall be made to all persons receiving the same class and amount of service.

#### ORDER.

IT IS THEREFORE BY THE COMMISSION ADVISED AND RECOMMENDED that the city commission of the city of Parsons make such changes in said ordinance as will provide a maximum rate for electricity sold for lighting purposes to residences, flats, dwelling houses and rooming houses, including incidental use of appliances on lighting circuits and passing through the same meter, not to exceed a charge of 10 cents per kilowatt hour for the first 20 kilowatt hours or less used per month; 7 cents per kilowatt hour for the next 40 kilowatt hours, and 4 cents per kilowatt hour for all current used in excess of 60 kilowatt hours per month; and that the maximum rate for electricity sold for all other lighting service shall not exceed 10 cents per kilowatt hour for the first 50 kilowatt hours; 7 cents per kilowatt hour for the next 100 kilowatt hours, and 4 cents per kilowatt hour for all current used in excess of 150 kilowatt hours.

That the minimum charge for all lighting shall be 75 cents per month.

That the schedule of rates for power for five-horsepower demand and over shall be:

	Cents per kw. hour.
For from 1 to 80 hours' use per month of demand.....	6
81 to 90 hours' use per month of demand.....	5.60
91 to 100 hours' use per month of demand.....	5.27
101 to 110 hours' use per month of demand.....	4.97
111 to 120 hours' use per month of demand.....	4.72
121 to 130 hours' use per month of demand.....	4.52
131 to 140 hours' use per month of demand.....	4.34
141 to 150 hours' use per month of demand.....	4.19
151 to 160 hours' use per month of demand.....	4.06
161 to 170 hours' use per month of demand.....	3.97
171 to 180 hours' use per month of demand.....	3.90
181 to 190 hours' use per month of demand.....	3.84
191 to 200 hours' use per month of demand.....	3.80
201 to 210 hours' use per month of demand.....	3.75
211 to 220 hours' use per month of demand.....	3.71
221 to 230 hours' use per month of demand.....	3.67
231 to 240 hours' use per month of demand.....	3.62
241 to 250 hours' use per month of demand.....	3.58
251 to 260 hours' use per month of demand.....	3.54
261 to 270 hours' use per month of demand.....	3.50
271 to 280 hours' use per month of demand.....	3.46
281 to 290 hours' use per month of demand.....	3.42
291 to 300 hours' use per month of demand.....	3.38

That the minimum charge shall be 50 cents per horsepower per month.

That the hours' use per month of demand shall be determined in the following manner: Divide the number of kilowatt hours used per month by .6 of the rated horsepower of the connected load.

That a discount of 10 per cent shall be allowed for all payments of all bills made on or before the 10th day of the month following the month for which such bill is incurred.

That the rates for arc lights shall be \$70 a year for each light; and for electricity sold to the street railway in the city of Parsons a charge of 2.56 cents per kilowatt hour shall be made, measured by direct-current meter.

That nothing herein contained shall prevent the Parsons Railway & Light Company from charging less for any kind of service hereinbefore mentioned, provided that the same rates shall be charged to all persons receiving the same kind and amount of service.

BY ORDER OF THE COMMISSION, this 8th day of November, 1912.

DOCKET No. 421.

[Submitted September 8, 1912. Decided November 8, 1912.]

Amended order, January 9, 1913.

State of Kansas, on the relation of John Marshall, Attorney for the Public Utilities Commission of the State of Kansas, v. Atchison, Topeka & Santa Fe Ry. Co., Chicago, Burlington & Quincy R. R. Co., Chicago, Rock Island & Pacific Ry. Co., Chicago Great Western Ry. Co., Kansas City, Mexico & Orient Ry. Co., Kansas City Southern Ry. Co., Kansas Southwestern Ry. Co., Kansas City, Clinton & Springfield Ry. Co., Leavenworth & Topeka Ry. Co., Midland Valley Ry. Co., Missouri Pacific Ry. Co., Missouri, Kansas & Texas Ry. Co., St. Joseph & Grand Island Ry. Co., St. Louis & San Francisco R. R. Co., Scott City Northern Ry. Co., Union Pacific R. R. Co.

**AMENDED ORDER.**

The order heretofore issued in the above-entitled cause on the 8th day of November, 1912, is hereby amended to read as follows:

The issues having been joined, the Commission entered upon a hearing in the above-entitled cause on the 3d day of September, 1912, and after the presentation of evidence and argument of counsel the matter was taken under advisement.

And now, on this 9th day of January, 1913, the Commission finds that a schedule of joint rates on the commodities named in complainant's petition should be established for application over two lines of railroad in the state of Kansas.

IT IS THEREFORE BY THE COMMISSION ORDERED, That on and after thirty days from date hereof rates for the transportation of carload shipments of the commodities hereinafter named over any two of the following railways, to wit:

Atchison, Topeka & Santa Fe Ry. Co., Chicago, Burlington & Quincy R. R. Co., Chicago Rock Island & Pacific Ry. Co., Chicago Great Western Ry. Co., Kansas City, Mexico & Orient Ry. Co., Kansas City Southern Ry. Co., Kansas Southwestern Ry. Co., Kansas City, Clinton & Springfield Ry. Co., Leavenworth & Topeka Ry. Co., Midland Valley R. R. Co., Missouri Pacific Ry. Co., Missouri, Kansas & Texas Ry. Co., St. Joseph & Grand Island Ry. Co., St. Louis & San Francisco R. R. Co., Scott City Northern R. R. Co., and Union Pacific R. R. Co., shall not exceed the mileage rates on such commodities fixed by section 1 of chapter 195 of the Session Laws of 1909, for the combined distances over such two lines of railway, and the following differentials, to wit:

*Live stock, when for slaughtering purposes:*

Cattle in straight cars, 2½ cts. per 100 lbs.

Sheep in double deck cars, 2½ cts. per 100 lbs.

Hogs in double deck cars, 2½ cts. per 100 lbs.

Hogs in single deck cars, 3 cts. per 100 lbs.

*Live stock, when for purposes other than slaughter:*

Cattle in straight cars, 3 cts. per 100 lbs.

Sheep in double deck cars, 3 cts. per 100 lbs.

Hogs in single deck cars, 3 cts. per 100 lbs.

Sheep in single deck cars, 3½ cts. per 100 lbs.

Horses and mules, \$8 per car.

Lumber, 2½ cts. per 100 lbs.

Hay, 3 cts. per 100 lbs.

Coal, 1 cent per 100 lbs.

Lime and plaster, 2 cents per 100 lbs.

Brick, and articles taking the same rates, 1½ cents per 100 lbs.

*Grain:*

Wheat, 2 cts. per 100 lbs.

Products of wheat, and articles taking the same rates, 2½ cts. per 100 lbs.

Corn, rye, oats and barley, 1½ cts. per 100 lbs.

Products of corn, oats, rye and barley, and articles taking the same rates, 2 cents per 100 lbs.

Flax and millet seed, broom corn seed, castor beans, hemp seed. hungarian seed and pop corn, 4 cents per 100 lbs.

Salt, 2 cents per 100 lbs.

Stone, undressed or crushed, 1 cent per 100 lbs.

Sand, 1 cent per 100 lbs.

IT IS FURTHER ORDERED, That the aforesaid basis of joint rates shall apply by way of the nearest grade crossings where track connections are established and shall be the maximum rates to be charged for such service, but in no case shall the sum of the local rates be exceeded. Wherever existing joint through rates are lower than the rates prescribed herein the same shall remain in full force and effect until changed by order of this Commission.

Where an intermediate line performs a switch service in the interchange of carload business, the switching rate of such intermediate line shall be in addition to the rates prescribed herein. Such switch service shall not be considered a part of the two-line haul.

IT IS FURTHER ORDERED, That where there is a conflict in the minimum-weight rules of the companies, the rules of the originating carrier shall govern.

IT IS FURTHER ORDERED, That the joint rates on grain and grain products shall be subject to the transit rules and regulations of the defendant companies.

IT IS FURTHER ORDERED, That said defendants shall, within thirty days from date hereof, publish and file with this Commission and with each railroad agent in the state of Kansas, the schedule of joint rates and rules and regulations herein prescribed.

IT IS FURTHER ORDERED, That said defendants shall, within sixty days from date hereof, publish and file with the Commission and with each railroad agent in the state of Kansas, a joint tariff giving a list of the individual tariffs containing rates on the commodities herein named and applicable between all points in the state of Kansas.

## ORIGINAL COST OF UNION PACIFIC RIGHT OF WAY.

DOCKET No. 465.

[Decided November 25, 1912.]

In the matter of the investigation of the transit rules and regulations of the Kansas railroads.

#### AMENDED FINDINGS AND ORDER.

The findings and order entered in the above entitled cause on the first day of November, 1912, are hereby amended to read as follows:

This action was brought on the initiative of the Commission for the purpose of determining to what extent the new transit rules and regulations recently published by the Kansas lines violate the laws of the state, discriminate against the interior mills, and impose unjust and unreasonable burdens upon the people generally.

The records show that the railway companies failed to secure the authority of this Commission to make the proposed change in the transit rules and regulations in accordance with section 20 of chapter 238 of the Session Laws of 1911, and to that extent the same are unlawful.

At the hearing on October 30, the complaint of the millers was directed against the rules providing for a division of the products, the limitation of the mixed car lot and the color scheme.

The evidence showed very clearly that hundreds of mills have been established at interior points in Kansas upon the old transit rules of the carriers, which permitted them to compete on something like an equality with the mills at the Missouri river and other primary markets from which proportional or reshipping rates apply. So far no satisfactory or reasonable basis of reshipping rates from interior points has been worked out, and the proposed rules would only serve to seriously cripple the interior miller; in fact, there is grave doubt whether he could exist at all if the rules complained of were rigidly enforced. It is very evident to us that if these rules are to be enforced at the interior and reshipping rates are to be allowed at the primary markets, the milling industry must be concentrated at the rate-breaking points. As an economic proposition this condition should never be permitted. The miller at the interior should be allowed to do under the transit rules what his competitor at the primary market can do under his reshipping rates.

The effect of the proposed rules would be to raise the total charges on many shipments milled at interior points, although the rates themselves might not be advanced.

In our opinion, the rule providing for a division of products is unjust, unreasonable and inequitable. After allowing for the arbitrary reductions suggested in the opinion of the Interstate Commerce Commission on account of the natural shrinkage in milling, shelling, drying, cleaning or clipping grain, the interior miller should be permitted to ship his products where he can dispose of them to the best advantage, without regard to any ratio of the products to the particular grain. The transit privilege should be allowed on weight out equal to the actual weight of the grain into the transit point, less the arbitrary reductions prescribed by the Interstate Commerce Commission.

A great deal of complaint was made against the mixed-car-lot rule, limiting the application of the carload rate to that portion of the shipment, whether transit or nontransit, the actual or billed weight of which is 10,000 pounds or more.

The evidence shows very clearly that this rule has imposed a heavy burden on the small dealers throughout the state who are compelled to buy in small lots. We can see no good reason why the manufacturer of mixed feeds should not have the privilege of mixing transit and non-transit articles in the same car at the proportional carload rate or the balance of the through rate on the transit portion, and the flat carload rate from transit point on the nontransit portion, without regard to the weight of any particular proportion of the shipment, provided that the mixed carload minimum is observed.

The third objection was made to the color scheme, and it was conclusively shown that the enforcement of this provision would prove a great handicap to the milling interests of the state of Kansas.

There seems to be no particular objection to the other transit rules and regulations, and we are of the opinion that they should be adopted in Kansas.

IT IS THEREFORE ORDERED that the Kansas railroads, and each of them, be, and they are hereby, required to publish within thirty days from date hereof modified transit rules and regulations to govern the transportation of Kansas intrastate shipments of grain and grain products in the following particulars, to wit:

*First.* A rule providing that any quantity of grain products may be forwarded from the transit station without regard to any ratio of the products to the particular grain, except that the arbitrary percentages prescribed by the Interstate Commerce Commission, on account of loss in the milling process, should be first deducted from the gross weight of the grain.

*Second.* A rule authorizing the transportation of mixed car lots of transit and nontransit articles within the state of Kansas at the proportional carload rate or the balance of the through rate on the transit portion of such a shipment, and the flat carload rate from the transit point on the nontransit portion, without regard to the weight of any particular portion of the shipment, provided that the mixed carload minimum is observed. If the actual weight of the mixed carload is less than the minimum required, the weight of the lot taking the lowest rate should be increased, at the flat carload rate from the transit point, sufficiently to preserve the minimum carload weight.

*Third.* A rule providing that the so-called color scheme or rule shall not apply on Kansas intrastate shipments of grain or grain products.

## INFORMAL TELEPHONE RULINGS.

---

The following rulings have been made by the Kansas Public Utilities Commission in answer to inquiries since its organization on May 22d, 1911:

1. **FREE OR REDUCED RATES OR SERVICE.** Section 12 of chapter 238 of the Session Laws of 1911, commonly known as the public utilities law, provides:

"No common carrier or public utility governed by the provisions of this act shall, knowingly or willfully, charge, demand, collect or receive a greater or less compensation for the same class of service performed by it within the state, or for any service in connection therewith, than is specified in the printed schedules or classifications, including schedules of joint rates; or demand, collect or receive any rate, joint rate, toll, fare or charge not specified in such schedule or classification; provided, that rates different from those specified in the printed schedule or classification of rates may be charged by any public utility, street or interurban railway, by agreement with the customer, in cases of charity, emergency, festivity or public entertainment; provided, that any utility governed by the provisions of this act may grant to the officers, employees, and agents of such utilities free or reduced rates or service upon like terms in the same manner as is now provided by law relating to common carriers."

Request has been made upon the common carriers and public utilities, governed by the provisions of the act, to publish and file with the Commission schedules of rates charged for various classes of service furnished the public.

The schedules of the public utilities show many flagrant violations of the law. In many instances free service is accorded patrons who are not within the excepted classes named in section 12. In other cases special rates, materially less than the regular rates charged the public, are given favored patrons. In many instances stockholders of public utilities are given rates which are less than those charged the general public.

It is therefore ruled by the Commission that it is a violation of the terms of section 12 of chapter 238 of the Session Laws of 1911 for any public utility governed by the provisions of the act to accord to any person or persons, other than officers, employees and agents of such utilities, free service or rates at variance with those charged the general public for the same service under similar conditions, except in cases of charity, emergency, festivity or public entertainment. (No. 145. November 7, 1911.)

2. It is the opinion of the Commission that the practice of public utilities in according free service or rates at variance with those charged the general public, except in cases of charity, emergency, festivity, public entertainment, or by virtue of franchise obligation, should cease immediately. As a matter of fact such action on the part of the utilities has been clearly in violation of the provisions of the public utilities law since May 22, 1911. (November 21, 1911.)

3. **TOLL SERVICE TO NONSUBSCRIBERS.** It is held by the Commission to be an unjust discrimination, under the provisions of chapter 238 of the Session Laws of 1911, for a telephone company to charge nonsubscribers a greater rate for toll service than the company's own subscribers pay for the same service. (November 21, 1911.)

**NOTE.**—This refers only to cases where service has been placed on a measured basis.

4. **TOLL RATE—SAME IN BOTH DIRECTIONS.** In the judgment of the Commission the charging of a higher rate for toll service in one direction than in the reverse direction, between two given telephone stations, is an unjust discrimination and in violation of the provisions of chapter 238 of the Session Laws of 1911. (November 21, 1911.)

5. A telephone in a business man's living apartments should be charged the residence rate so long as it is not used for business purposes. (No. 107. November 24, 1911.)

6. **MUTUAL TELEPHONE COMPANY DEFINED.** "A mutual telephone company is defined by section 3 of chapter 238 of the Session Laws of 1911 to be any coöperative telephone company operating only for the mutual benefit of its subscribers, without profit other than in the service received."

In the opinion of the Commission a mutual telephone company is one that is furnishing telephone service to members of the association only and is not engaged in the business of renting telephones or transmitting toll messages for the public for compensation. Whenever any telephone company attempts to serve the public for compensation it becomes a public utility and is governed by the provisions of the public utilities law. (December 6, 1911.)

7. **ONE TELEPHONE FOR TWO SUBSCRIBERS.** The Commission is of the opinion that it would not be a discrimination to give two merchants one telephone and charge a rate of one and one-half times the regular rate, provided this privilege was accorded to all alike. (January 4, 1912.)

8. **ROOMING AND BOARDING HOUSE RATE.** In the judgment of the Commission the residence rate should be accorded rooming and boarding houses until a more satisfactory showing is made that the use of the telephone justifies the business rate. (January 16, 1912.)

9. **DESK TELEPHONE AN ADDITIONAL FACILITY.** In the opinion of the Commission a desk telephone is an additional facility which the company is not compelled to furnish at the same rate charged for wall telephones. (No. 226. January 16, 1912.)

10. **RATE FOR COUNTY OFFICES.** The Commission is of the opinion that county officers should be charged the same rate as other business concerns. Telephones in the residence of county jailers should be charged for at the residence rate and not the business rate. (January 23, 1912.)

11. **PUBLIC CONVENIENCE.** The duty rests upon the applicant to show that public convenience and necessity will be subserved by permitting another utility to enter the same field. *In re Application of F. E. Workman.* (No. 179. February 5, 1912.)

12. **POWER OF THIRD-CLASS CITY TO REGULATE TELEPHONE RATES.** It is contended that the Kinsley Automatic Telephone Company is situated principally within the city of Kinsley and principally operated for the benefit of the people of that city, and not subject to control by this Commission. Measured by every standard fixed by the legislature, the Kinsley Automatic Telephone Company can not fairly be said to be situated principally within the city of Kinsley nor even serving the people of that city principally. It therefore follows that the company is under the Commission's jurisdiction.

There is no grant of power in any of the laws of this state authorizing cities of the third class to regulate the rates of telegraph or telephone companies not situated and operated wholly or principally within the city or principally operated for the benefit of such city or its people. (No. 160. February 27, 1912.)

13. In the opinion of the Commission it is a discrimination to furnish a subscriber a number of individual line business telephones and charge the regular business rate for the first telephone and a lower rate for each additional phone. Such a practice is contrary to the spirit of the public utilities law. (March 16, 1912.)

14. **"KNIFE SWITCH" CONDEMNED.** The use of the "knife switch" is undesirable from an operating point of view. The use of such appliances frequently results in inefficient and unsatisfactory service to other subscribers. (No. 202. April 16, 1912.)

15. **COMBINATION RATE DISCRIMINATORY.** In the opinion of the Commission the so-called "combination rate," where telephone subscribers are allowed both business and residence telephones for less than the sum of the rates for the two classes of service, is a discrimination against the subscribers who maintain but one telephone of the same class, and the practice should be discontinued. (April 17, 1912.)

16. **TELEPHONES IN DEPOTS.** This statute requires the railway companies to maintain reasonably adequate service, and neither the railway company nor the telephone company can discontinue such service without the consent of this Commission. If any telephonic service is inadequate, or unreasonably or unjustly discriminatory, then complaint can be made to this Commission under the provisions of section 2 of chapter 186 of the Session Laws of 1911.

In the judgment of the Commission, railway companies are required to pay for telephone service, the same as other subscribers, unless other arrangements are authorized by the Commission. *Whitewater Tel. Co. v. Mo. Pac. Ry. Co.* (No. 257. April 24, 1912.)

17. The use of the telephone should determine the rate. If the telephone company makes a distinction between business houses and residences, the mere location of the place of business would not be the proper measure of the rate. All business houses should pay the business rate, regardless of whether they may be upstairs or downstairs. (May 14, 1912.)

## PUBLIC UTILITIES LAW.

**SECTION 1.** The Board of Railroad Commissioners of the state of Kansas is hereby constituted and created a Public Utilities Commission for the state of Kansas, and such commission is given full power, authority and jurisdiction to supervise and control the public utilities and all common carriers, as hereinafter defined, doing business in the state of Kansas, and is empowered to do all things necessary and convenient for the exercise of such power, authority and jurisdiction.

**SEC. 2.** All laws relating to the powers, duties, authority and jurisdiction of the Board of Railroad Commissioners of this state are hereby adopted, and all powers, duties, authority and jurisdiction by said laws imposed and conferred upon the said Board of Railroad Commissioners, relating to common carriers, are hereby imposed and conferred upon the commission created under the provisions of this act.

**SEC. 3.** The term "public utility," as used in this act, shall be construed to mean every corporation, company, individual, association of persons, their trustees, lessees or receivers, that now or hereafter may own, control operate or manage, except for private use, any equipment, plant, generating machinery, or any part thereof, for the transmission of telephone messages or for the transmission of telegraph messages in or through any part of the state, or the conveyance of oil and gas through pipe lines in or through any part of the state, except pipe lines less than 15 miles in length and not operated in connection with or for the general commercial supply of gas or oil, or for the operation of any trolley lines, street, electrical or motor railway doing business in any county in the state; also all dining-car companies doing business within the state, and all companies for the production, transmission, delivery or furnishing of heat, light, water or power; provided, that this act shall not refer to or include mutual telephone companies. That mutual telephone companies, for the purpose of this act, shall be understood to mean any co-operative telephone company operating only for the mutual benefit of its subscribers without profit other than in the service received. Nothing in this act shall apply to any public utility in this state owned and operated by any municipality. The power and authority to control and regulate all public utilities and common carriers situated and operated wholly or principally within any city or principally operated for the benefit of such city or its people, shall be vested exclusively in such city, subject only to the right to apply for relief to said Public Utilities Commission as hereinafter provided in section 33 of this act.

**SEC. 4.** The term "common carriers," as used in this act, shall include all railroad companies, express companies, street railroads, suburban or interurban railroads, sleeping-car companies, freight line companies, equipment companies, pipe line companies, and all persons and associations of persons, whether incorporated or not, operating such agencies for public use in the conveyance of persons or property within this state.

**SEC. 5.** The present members of the Board of Railroad Commissioners, which board has been constituted and created by this act as a Public Utilities Commission, shall retain their respective offices for the terms for which they were elected and until their successors are appointed and qualified and shall receive no additional salary as members of the Public Utilities Commission. Thereafter, the said Public Utilities Commission shall be composed of three commissioners, who shall be appointed

by the governor, by and with the advice and consent of the Senate, one of whom shall be a practical, experienced business man, and one experienced in the management or operation of a common carrier or public utility. Of such three persons, one shall be appointed and designated to serve for a term of one year, one for a term of two years, and one for a term of three years, said term to begin upon the qualifications of the person appointed therefor. Upon the expiration of the terms of the three commissioners first to be appointed as aforesaid, each commissioner shall be appointed and shall hold his office for the term of three years, and until his successor shall have been qualified. In case of a vacancy in the office of the commission, the governor shall appoint his successor to fill the vacancy for the unexpired term. After the expiration of the present term of the present members of said commission, the salary of each commissioner shall be four thousand dollars per year; provided, that not more than two members of said public utility commission shall be of the same political party.

SEC. 6. The secretary for the Board of Railroad Commissioners shall hereafter be the secretary of the Public Utilities Commission, and his office shall hereafter be known as the office of the secretary of the Public Utilities Commission, and he shall receive the same salary as is now prescribed by law for the secretary of the Board of Railroad Commissioners, and he shall be appointed by the Public Utilities Commission in the manner and for the time as is now prescribed by law for the appointment of a secretary of the Board of Railroad Commissioners; and he shall have the powers and perform the duties now devolving upon the secretary of the Board of Railroad Commissioners.

SEC. 7. The attorney for the Board of Railroad Commissioners shall hereafter be the attorney of the Public Utilities Commission, and his office shall hereafter be known as the office of the attorney of the Public Utilities Commission, and he shall receive a salary of twenty-five hundred dollars per year, and he shall be appointed by the Commission for a term of two years, and he shall have the same powers and perform the duties now devolving upon the attorney for the Board of Railroad Commissioners; and he shall act as counsel for the Public Utilities Commission, and perform such other duties as shall be imposed on him by the Public Utilities Commission. He shall appoint a stenographer, who shall receive a salary of twelve hundred dollars per annum.

SEC. 8. No person owning any bonds, stock or property in any railroad company or other common carrier or public utility, or who is in the employment of, or who is in any way or manner pecuniarily interested in, any railroad company or other common carrier or public utility, shall be eligible, except as hereinafter provided, to the office of commissioner, attorney or secretary of said commission, nor shall such commissioner, attorney or secretary hold any office of profit or any position under any committee of any political party, or hold any other position of honor, profit or trust under or by virtue of any of the laws of the United States or of the state of Kansas. Said commissioners shall be qualified electors of the state, and shall not while such commissioners engage in any occupation or business inconsistent with their duties as such commissioners. And if any member of the commission, at the time of his appointment, shall own any bonds, stock or property in any railroad company or other common carrier or public utility, or is in the employment of, or is in any way or manner pecuniarily interested in any railroad company or any common carrier or public utility, such commissioner or other appointee shall within thirty days divest himself of such interest or employment, and upon his failing to do so he shall forfeit his office, and the governor shall remove such commissioner and shall appoint his successor, who shall hold until a successor is appointed and qualified. Each of said commissioners, attorney and secretary shall be sworn, before entering upon the discharge of the same, to faithfully

perform the duties of the respective offices. Each of said commissioners shall enter into a bond, with security to be approved by the governor, in the sum of ten thousand dollars, conditioned for the faithful performance of his duties. Said commissioners shall have the power to appoint one rate clerk, who shall be an expert, and who shall receive a salary of not to exceed five thousand dollars a year; one stenographer who shall receive a salary of one thousand dollars per year; one stenographer who shall receive a salary of nine hundred dollars per year; and two clerks, who shall receive a salary of nine hundred dollars per annum each; and said Public Utilities Commission is also authorized and empowered to employ subject to the approval of the governor, such other extra accountants, engineers, experts and special assistants as in its judgment may be necessary and proper to carry the provisions of this act into effect and fix their compensation; and such rate clerk, stenographers and clerks shall hold their office during the pleasure of said commission; provided, that no person related by blood or marriage to any member of such commission shall be employed or appointed to any place or position under the provisions of this act.

SEC. 9. The commission shall have power to adopt reasonable and proper rules and regulations to govern its proceedings including the assessment and taxation of costs on any complaint provided for in section 33 hereof, and to regulate the mode and manner of all investigations, tests, audits, inspections and hearings not specifically provided for herein. The commission may confer with officers of other states and officers of the United States on any matter pertaining to their official duties.

SEC. 10. Every common carrier and public utility governed by the provisions of this act shall be required to furnish reasonably efficient and sufficient service, joint service and facilities for the use of any and all products or services rendered, furnished, supplied or produced by such public utility or common carrier and to establish just and reasonable rates, joint rates, fares, tolls, charges and exactions and to make just and reasonable rules, classifications and regulations; and every unjust or unreasonable discriminatory or unduly preferential rule or regulation, classification, rate, joint rate, fare, toll or charge demanded, exacted or received is prohibited and hereby declared to be unlawful and void, and the Public Utilities Commission shall have the power, after notice and hearing of the interested parties, to require any common carriers and all public utilities governed by the provisions of this act to establish and maintain just and reasonable joint rates wherever the same are reasonably necessary to be put in, in order to maintain reasonably sufficient and efficient service from such public utilities and common carriers.

SEC. 11. Every public utility and every common carrier doing business in Kansas, over which the Public Utilities Commission have control, shall publish and file with the Public Utilities Commission copies of all schedules of rates, joint rates, tolls, fares, charges, classifications and divisions of rates affecting Kansas traffic, either state or interstate, and shall furnish said commission with copies of all rules, regulations and contracts between common carriers or public utilities pertaining to any and all service to be rendered by such public utility or common carrier. The Public Utilities Commission shall have power to prescribe reasonable rules and regulations regarding the printing and filing of all schedules, tariffs, and classifications of all rates, joint rates, tolls, fares, charges and all rules and regulations of such public utilities and common carriers.

SEC. 12. No common carrier or public utility governed by the provisions of this act shall, knowingly or willfully, charge, demand, collect or receive a greater or less compensation for the same class of service performed by it within the state, or for any service in connection therewith, than is specified in the printed schedules or classifications, including

schedules of joint rates; or demand, collect or receive any rate, joint rate, toll, fare or charge not specified in such schedule or classification; provided, that rates different from those specified in the printed schedule or classification of rates may be charged by any public utility, street or interurban railway, by agreement with the customer, in cases of charity, emergency, festivity or public entertainment; provided, that any utility governed by the provisions of this act may grant to the officers, employees and agents of such utilities free or reduced rates or service upon like terms and in the same manner as is now provided by law relating to common carriers.

SEC. 13. It shall be the duty of the commission, either upon complaint or upon its own initiative, to investigate all rates, joint rates, fares, tolls, charges and exactions, classifications or schedules of rates, or joint rates and rules and regulations, and if after full hearing and investigation the commission shall find that such rates, joint rates, fares, tolls, charges or exactions, classifications or schedules of rates or joint rates, or rules and regulations, are unjust, unreasonable, unjustly discriminatory or unduly preferential, the commission shall have power to fix and order substituted therefor such rate or rates, fares, tolls, charges, exactions, classifications or schedules of rates or joint rates and such rules and regulations as shall be just and reasonable. If upon any investigation it shall be found that any regulation, measurement, practice, act or service complained of is unjust, unreasonable, unreasonably inefficient, insufficient, unduly preferential, unjustly discriminatory, or otherwise in violation of any of the provisions of this act or of the orders of this commission, or if it be found that any service is inadequate or that any reasonable service can not be obtained, the commission shall have power to substitute therefor such other regulations, measurements, practices, service or acts, and to make such order respecting any such charges in such regulations, measurements, practices, service or acts as shall be just and reasonable. Whenever, in the judgment of the Public Utilities Commission, public necessity and convenience require, the commission shall have power to establish just and reasonable concentration, commodity, transit or other special rates, charges or privileges, but all such rates, charges and privileges shall be open to all users of a like kind of service under similar circumstances and conditions.

SEC. 14. Upon a complaint in writing made against any common carrier or public utility governed by the provisions of this act, by any mercantile, agricultural or manufacturing organization or society, or by any body politic or municipal organization, or by any taxpayer, firm, corporation or association, that any of the rates or joint rates, fares, tolls, charges, rules, regulations, classifications or schedules of such public utility or common carrier are in any respect unreasonable, unfair, unjust, unjustly discriminatory or unduly preferential, or both, or that any regulation, practice or act whatsoever affecting or relating to any service performed or to be performed by such public utility or common carrier for the public, is in any respect unreasonable, unfair, unjust, unreasonably inefficient, insufficient, unjustly discriminatory or unduly preferential, or that any service performed or to be performed by such public utility or common carrier for the public is unreasonably inadequate, inefficient, unduly insufficient or can not be obtained, the commissioners shall proceed, with or without notice, to make such investigation as they may deem necessary. The commissioners may, upon their own motion, and without any complaint being made, proceed to make such investigation, but no order affecting such rates, joint rates, tolls, charges, rules, regulations and classifications, schedules, practices, or acts complained of shall be made or entered by the commission without a formal public hearing, of which due notice shall be given by the commission to such public utility or common carrier or to such complainant, or complainants, if any. Any public investigation or hearing which such

commission shall have power to make or to hold may be made or held before any one or more commissioners, and all investigations, hearings, decisions and orders made by a commissioner shall be deemed and held to be the investigations, hearings, decisions and orders of the Public Utilities Commission, when approved and filed by such commission and filed in their office, and the commission shall have power to require such public utilities and common carrier to make such improvements and do such acts as are or may be required by law to be done by such public utility or common carrier.

SEC. 15. Whenever notice shall be required by the provisions of this act to be given any common carrier or public utility governed by the provisions of this act, and the complainant, or either of them, thirty days' written or printed notice of the time and place when and where such investigation or hearing will be had shall be given, such notice to be served by mailing a copy thereof to the public utility or common carrier and complainant. Such notice shall embody in substance the complaint, if any, made against the public utility or common carrier upon which the hearing, investigation and decision of the Public Utilities Commission is requested or on which it will be given. The public utility or common carrier, or the complainant or complainants, if any, shall be entitled to be heard, and shall have process to enforce the attendance of witnesses and the production of books, papers, maps, contracts, reports and records of every description affecting the subject matter of the investigation. The Public Utilities Commission may, without præcipe or demand therefor, require the production of any books, papers, contracts, records or other documents in the possession of or under the control of the common carrier, public utility, complainant or complainants, affecting the subject matter of the controversy.

SEC. 16. If upon such hearing and investigation the rates, joint rates, fares, tolls, charges, rules, regulations, classifications, or schedules of such common carrier or public utility governed by the provisions of this act, are found to be unjust, unreasonable, unfair, unjustly discriminatory or unduly preferential, or in any wise in violation of the provisions of this act, or of any of the laws of the state of Kansas, the Public Utilities Commission shall have the power to fix and establish, and to order substituted therefor, such rates, joint rates, fares, tolls, charges, rules, regulations, classifications or schedules as it shall find, determine or decree to be just, reasonable and necessary; and if it shall be found that any regulation, practice or act whatsoever, relating to any service performed or to be performed by such public utility or common carrier for the public in any respect unreasonable, unjust, unfair, unreasonably inefficient, insufficient, unjustly discriminatory or unduly preferential, or otherwise in violation of any of the provisions of this act, or of any of the laws of the state of Kansas, the Public Utilities Commission shall have full power, authority and jurisdiction to substitute therefor such other regulations, practice, service or act as they find and determine to be just, reasonable and necessary. All orders and decisions of the Public Utilities Commission whereby any rates, joint rates, fares, tolls, charges, rules, regulations, classifications, schedules, practice or acts relating to any service performed or to be performed by such public utility or common carrier for the public are altered, changed, modified, fixed or established, shall be reduced to writing, and a copy thereof, duly certified, shall be served on the public utility or common carrier affected thereby, by registered mail; and such order and decision shall become operative and effective within thirty days after such service, and such public utility or common carrier shall, unless an action is commenced in a court of proper jurisdiction to set aside the findings, orders and decisions of said Public Utilities Commission, or to review and correct the same carry the provisions of said order into effect.

SEC. 17. No person shall be excused from testifying or from producing any books, accounts, maps, papers or documents in any action or proceeding, based upon or growing out of any alleged violation of any of the provisions of this act, on the ground or for the reason that the testimony or evidence, documentary or oral, required from him, may tend to incriminate him or subject him to penalty or forfeiture; but no person having so testified shall be prosecuted or subject to any penalty, punishment or forfeiture on account of any transaction, matter or thing concerning which he may have testified or produced any documentary evidence; providing that no person so testifying shall be exempted from prosecution or punishment for perjury committed in so testifying.

SEC. 18. All orders, regulations, practices, services, rates, fares, charges, classifications, tolls, and joint rates fixed by the commission shall be in force and effect on and after thirty days from the making thereof and expiration of thirty days after service aforesaid, shall be *prima facie* reasonable unless, or until, changed or modified by the commission or in pursuance of proceedings instituted in court as provided in this act.

SEC. 19. All findings, rates, joint rates, fares, tolls, charges, rules, regulations, classifications and schedules fixed and established by the Public Utilities Commission shall be in full force and effect, and all regulations, practices, services and acts prescribed or required by the Public Utilities Commission to be done or carried into effect unless otherwise found and determined or stayed by a court of competent jurisdiction as hereinafter provided.

SEC. 20. Whenever any common carrier or public utility governed by the provisions of this act shall desire to make any change in any rate, joint rate, toll, charge or classification or schedule of charges, or in any rule or regulation or practice pertaining to the service or rates of any such public utility or common carrier, such public utility or common carrier shall file with the Public Utilities Commission a schedule showing the changes desired to be made and put in force by such public utility or common carrier, and such changes shall be plainly indicated by proper reference marks in amendments or supplements to existing tariffs, schedules or classifications, or in new issues thereof. No change shall be made in any rate, toll, charge or classification or schedule of charges, joint rates, or in any rule or regulation or practice pertaining to the service or rates of any such public utility or common carrier without the consent of the commission, and within thirty days after such changes have been authorized by said Public Utilities Commission, then copies of all tariffs, schedules, and classifications, and all rules and regulations, shall be filed in every station, office or depot of every such public utility and every common carrier in this state, for public inspection.

SEC. 21. Any common carrier or public utility governed by the provisions of this act, or other party in interest, being dissatisfied with any order of the commission fixing any valuation, toll, rate, joint rate, fare, charge, or findings, rules or regulations, classifications, schedules, or any order or ruling fixing any regulations, practices or service, or order or ruling relating to the issuance of stocks, bonds or other securities hereinafter provided may, within thirty days from the making of such order, commence an action in a court of competent jurisdiction, against the Public Utilities Commission as defendant, to vacate and set aside any such order, finding or decision of the Public Utilities Commission on the ground that the valuation, toll, rate, joint rate, fare, charges, orders, rules, regulations, findings, classifications or schedules in such decisions are unlawful or unreasonable, or that any such regulation, valuation, practice or service fixed in such order or decision is unreasonable. All actions brought under this section shall have precedence in any court, and, on motion, shall be advanced over any civil cause of a different nature pending in such court, and such action shall be tried and determined as other civil actions.

Appeals from any decision of the district court shall be taken from the district court to the supreme court of the state of Kansas, in the same manner as provided by law in other civil actions. During the pendency of any action under the provisions of this act, all orders made by the Public Utilities Commission prescribing rates, joint rates, tolls, fares, charges, rules, regulations, classifications or schedules or findings, shall, unless temporarily stayed or enjoined, remain in full force and effect until final judgment is rendered therein. During the pendency of such appeal the judgment of the lower court shall remain in effect, unless stayed by order of the supreme court. Service of summons on any member of the board shall be sufficient service on the board.

SEC. 22. The commission may ascertain and prescribe for each kind of public utility governed by the provisions of this act, suitable and convenient standard commercial units of products in service. These shall be the lawful units for the purposes of this act. It shall prescribe reasonable regulations for examinations and testing of such products or service and for the measurement thereof. It shall establish reasonable rules, regulations, specifications and standards to secure the accuracy of all meters and appliances for measurements, and every public utility is required to carry into effect all orders issued by the commission relative thereto.

SEC. 23. Each public utility governed by the provisions of this act shall furnish to the commission, in such form and at such times as the commission shall require, such accounts, reports and information as shown in itemized detail: (1) The depreciation per unit; (2) the salaries and wages, separately, per unit; (3) legal expenses per unit; (4) taxes and rentals, separately, per unit; (5) the quantity and value of material used per unit; (6) the receipts from residuals, by-products, services or other sales, separately, per unit; (7) the total and net cost per unit; (8) the gross and net profit per unit; (9) the dividends and interest per unit; (10) surplus or reserve per unit; (11) the prices per unit paid by consumers; and, in addition, such other items, whether of a nature similar to those hereinbefore enumerated or other wise, as the commission may prescribe in order to show completely and in detail either the operation of the public utility or common carrier in furnishing the unit of its product or service to the public.

SEC. 24. Each common carrier and all public utilities governed by the provisions of this act now or hereafter authorized to do business in this state shall, on or before the 15th day of September, 1912, and on or before the same day in each year thereafter, make and transmit to the Public Utilities Commission, at its office in Topeka, Kan., a full and true statement, under oath, of the proper officers of such corporation, of the affairs of such public utility or common carrier, for the period ending on the 30th day of June preceding. Such annual reports shall show in detail the amount of the capital stock issued, the amounts paid therefor, and the manner of payment for same; the dividends paid; the surplus fund, if any, and the number of stockholders; the funded and floating debts, and the interest paid thereon; the cost and value of the carrier's property, franchises and equipment; the number of employees and the salaries paid each class; the accidents to passengers, employees and other persons, and the causes thereof; the amounts expended for improvements each year, how expended, and the character of such improvements; the earnings and receipts from each branch of the business and from all sources; the operating and other expenses; the balance of profit and loss, and a complete exhibit of the financial operations of such common carrier and public utility, each year, including an annual balance sheet. Such reports shall also contain such information in relation to rates and regulations concerning fares, freights, agreements, arrangements and contracts affecting the same, as the commission may require. Said detailed reports shall contain all the required statistics for the period of twelve months,

ending on the 30th day of June of each year, and shall be made under oath, and filed with the commission at Topeka, on or before the 15th day of September then next following, unless an additional time shall be granted in any case by the commissioners; and if any carrier, person or corporation subject to the provisions of this act shall fail to make and file such annual reports within the time above specified, or within the time extended by the commission for making and filing the same, such party shall forfeit to the state of Kansas the sum of one hundred dollars for each and every day it shall continue to be in default with respect thereto.

SEC. 24a. The power to create liens on corporate property situated within the state of Kansas by companies transacting the business of common carriers, as defined in the laws of this state, and public utilities governed by the provisions of this act in this state is a special privilege, the right of supervision, regulation, restriction and control of which shall be vested in the state, and such power shall be exercised according to law, and the provisions of this act shall apply to all companies organized under the laws of other states of the Union and of foreign countries, as well as to domestic corporations, transacting business in this state as a common carrier or as a public utility governed by the provisions of this act.

SEC. 25. A public utility or common carrier may issue stocks, certificates, bonds, notes or other evidences of indebtedness, payable at periods of more than twelve months after the date thereof, when necessary for the acquisition of property, for the purpose of carrying out its corporate powers, the construction, completion, extension or improvements of its facilities, or for the improvements or maintenance of its service, or for the discharge or lawful refunding of its obligations, or for such other purposes as may be authorized by law; provided, and not otherwise, that there shall have been secured from the commission a certificate stating the amount, character, purposes and terms on which such stocks, certificates, bonds, notes or other evidences of indebtedness are proposed to be issued, as set out in the application for such certificate, and that the statements contained in such application have been ascertained to be true, but this provision shall not apply to any lawful issue of stock, the lawful execution and delivery of any mortgage, or to the lawful issue of any bonds thereunder which shall have been duly approved by the Board of Railroad Commissioners prior to the taking effect of this act. The proceedings for obtaining such certificate from the commission and the conditions of its being issued by said board shall be as follows: (a) In case the stocks, certificates, bonds, notes or other evidences of indebtedness are to be issued for money only, the public utility or common carrier shall file with the commission a statement, signed and verified by the president or other chief officer of the company having knowledge of the facts, showing (1) the amount and character of the proposed stocks, certificates, bonds, notes or other evidences of indebtedness; (2) the general purposes for which they are to be issued; (3) the terms on which they are to be issued; (4) the total assets and liabilities of the public utility or common carrier; and (5) that the capital sought to be secured by the issuance of such stocks, certificates, bonds, notes or other evidences of indebtedness is necessary and required for such purposes and will be used therefor. (b) In case the stocks, certificates, bonds, notes or other evidences of indebtedness are to be issued partly or wholly for property or services or other consideration than money, the public utility or common carrier shall file with the commission a statement, signed and verified by the president or other chief officer having knowledge of the facts, showing (1) the amount and character of the stocks, certificates, bonds, notes or other evidences of indebtedness proposed to be issued; (2) the general purposes for which they are to be issued; (3) a general description and an estimated value of the property or services for which they are to be issued; (4) the terms on which they are to be issued or exchanged; (5) the amount of money, if any, to be received for the same in addition to

such property, services or other consideration; (6) the total assets and liabilities of the public utility or common carrier; and (7) that the capital sought to be secured by the issuance of such stocks, certificates, bonds, notes or other evidences of indebtedness is necessary and required for such purposes and will be used therefor. The commission may also require the public utility or common carrier to furnish such further statements of facts as may be reasonable and pertinent to the inquiry, and shall have full power to ascertain the truth of all statements made by such common carrier or public utility. Upon full compliance by the applicant with the provisions of this section the commission shall forthwith issue a certificate stating the amount, character, purposes and terms upon which such stocks, certificates, bonds, notes or other evidence of indebtedness are proposed to be issued, as set out in the application for such certificate, and that the statements contained in such application have been ascertained to be true. Any issue of stocks, certificates, bonds, notes or other evidences of indebtedness not payable within one year, which shall be issued by such public utility or common carrier contrary to the provisions of this act shall be void.

SEC. 26. Any common carrier or public utility governed by the provisions of this act, or any agent, director or officer thereof, who shall, directly or indirectly, issue or cause to be issued any stock, certificate of stock, bonds or other evidences of indebtedness contrary to the provisions of this act, or who shall apply to the proceeds from the sale thereof to any purpose other than that specified in the certificate of the commission, as herein provided, shall be guilty of a misdemeanor, and upon conviction thereof shall be fined not less than five hundred dollars and not more than five thousand dollars, or by imprisonment in the county jail not more than one year or by both such fine and imprisonment.

SEC. 27. No common carrier or public utility governed by the provisions of this act, domestic or foreign, shall hereafter purchase or acquire, take or hold any part of the capital stock, bonds or other forms of indebtedness of any competing public utility or common carrier, either as owner or pledgee, unless authorized by the commission. Any common carrier engaged in intrastate commerce in this state is prohibited in the transportation of such commerce, articles or commodities under the following circumstances and condition: (a) when the article or commodity has been manufactured, mined or produced by a carrier or under its authority and at the time of the transportation the carrier has not in good faith, before the act of transportation, disassociated itself from such article or commodity; (b) when the carrier owns the article or commodity to be transported, in whole or part; (c) when the common carrier at the time of transportation has a legal or equitable interest, directly or indirectly, in the article or commodity, except materials and supplies for its own use. Every public utility is prohibited from engaging in any business in this state which is not in conformity with its charter or in which it is not permitted to engage under the laws of the state of Kansas; provided, that this section shall not apply to ownership by railroads of the stock, bonds, or other forms of indebtedness of union depot or terminal railroad properties used in common by two or more such railroads.

SEC. 28. Said commission shall have the power and it shall be its duty to ascertain the reasonable value of all property of any common carrier or public utility governed by the provisions of this act used or required to be used in its services to the public within the state of Kansas, whenever it deems the ascertainment of such value necessary in order to enable the commission to fix fair and reasonable rates, joint rates, tolls and charges, and in making such valuations they may avail themselves of any reports, records or other things available to them in the office of any national, state or municipal officer or board.

SEC. 29. The commission shall have authority to examine and audit

all accounts, and all items shall be allocated to the accounts prescribed by the commission. The agents, accountants or examiners employed by the commission shall have authority under the direction of the commission to inspect and examine any and all books, accounts, papers, records, property and memoranda kept by such public utilities and common carriers. The accounts shall be closed annually on the 30th day of June, and a balance sheet of that date promptly taken therefrom.

SEC. 30. Unless the commission shall otherwise order, it shall be unlawful for any common carrier or public utility governed by the provisions of this act within this state to demand, collect or receive a greater compensation for any service than the charge fixed on the lowest schedule of rates for the same services on the 1st day of January, 1911.

SEC. 31. No common carrier or public utility governed by the provisions of this act shall transact business in the state of Kansas until it shall have obtained a certificate from the Public Utilities Commission that public convenience will be promoted by the transaction of said business and permitting said applicants to transact the business of a common carrier or public utility in this state. This section shall not apply to any common carrier or public utility governed by the provisions of this act now transacting business in this state.

SEC. 32. Every common carrier and every public utility governed by the provisions of this act shall, whenever an accident attended with loss of human life or serious personal injury occurs upon its premises within this state, give immediate notice thereof by telegraph to the commission. In the event of any such accident, the commission, if it deem the public interest requires it, shall cause an investigation to be made forthwith, in connection with the labor commissioner, as now provided by law, which investigation shall be held in the locality of the accident, unless for greater convenience of those concerned it shall order such investigation to be held at some other place. Said investigation may be adjourned from place to place as may be found necessary and convenient. The commission shall seasonably notify an officer or agent of the public utility or common carrier of the time and place of the investigation.

SEC 33. Every municipal council or commission shall have the power and authority, subject to any law in force at the time, to contract with any public utility or common carrier, situated and operated wholly or principally within any city or principally operated for the benefit of such city or its people, by ordinance or resolution, duly considered and regularly adopted: (1) As to the quality and character of each kind of product or service to be furnished or rendered by any public utility or common carrier, and the maximum rates and charges to be paid therefor to the public utility or common carrier furnishing such product or service within said municipality, and the terms and conditions, not inconsistent with this act or any law in force at the time under which such public utility or common carrier may be permitted to occupy the streets, highways or other public property within such municipality. (2) To require and permit any public utility or common carrier to make such additions or extensions to its physical plant as may be reasonable and necessary for the benefit of the public, and may designate the location and nature of such additions and extensions at the time within which such shall be completed, and the terms and conditions under which the same shall be constructed. (3) To provide a reasonable and lawful penalty for the noncompliance with the provisions of any ordinance or resolution adopted in pursuance with the provisions hereof; provided, however, that no ordinance or resolution granting or extending any right, privilege or franchise shall be in force or effect until thirty days after the same shall have been duly published; nor if any complaint be made, as hereinafter provided for, shall said ordinance or resolution be in effect while any proceedings to review before said commission or action or appeal in any court in relation thereto shall be pending. Upon

any complaint being made, within fifteen days after the publication of any such ordinance or resolution, to the Public Utilities Commission or any such public utility or common carrier, or by ten or more taxpayers ~~of any~~ such municipality a bond to pay costs of the hearing having first been filed by the complainant with and approved by the said commission, that any right, privilege or franchise granted or ordinance or resolution or part of any ordinance or resolution adopted, by any municipal council or commission is unreasonable, or against public policy, or detrimental to the best interests of the city, or contrary to any provisions of law, the Public Utilities Commission shall set a date for the hearing of such complaint, not less than ten days after date of filing thereof, and shall cite the parties interested to appear on a date named, which date shall be not less than ten days after the fixing of the date of the hearing, and on that date, or at a time agreed upon by the interested parties, or a date fixed by the Public Utilities Commission, the complainant shall present such evidence as they or it may have in support thereof, and show why such complaint should be sustained, and the Public Utilities Commission may inquire into the allegations in such complaint, and may subpoena witnesses, and take testimony to ascertain the truth of the allegations contained therein in contemplation of bringing an action as hereinafter provided; and if said commission shall find that any provision of any such ordinance or resolution is unreasonable, or against the public welfare or public interest, or has reason to believe that the same may be contrary to law, said Public Utilities Commission shall, within ten days, advise and recommend such changes in the ordinance or resolution as may be necessary to meet the objections set forth in the complaint and protect the public interest, and to remove any unreasonable provision therefrom; and if such municipal council or commission shall not within twenty days thereafter amend such ordinance or resolution to conform to the recommendations of said Public Utilities Commission, the Public Utilities Commission may, in the name of the state of Kansas, within thirty days after such finding, commence proceedings against such municipal council or commission and common carrier or public utility governed by the provisions of this act in any court of competent jurisdiction, to set aside any ordinance or resolution, or part thereof, because of its unreasonableness or illegality, or because the same is not for the promotion of the welfare and best interests of said municipality, which action and proceedings shall be in conformity with the provisions of this act.

SEC. 34. No common carrier or public utility governed by the provisions of this act shall issue any stock, certificates, bonds, notes or other evidences of indebtedness, for money, property or services, either directly or indirectly, nor shall it receive any money, property or services in payment of the same either directly or indirectly until there shall have been recorded upon the books of such corporation the certificate of the commission herein provided for.

SEC. 35. No common carrier or public utility governed by the provisions of this act shall declare any stock, bond or scrip dividends or divide the proceeds of the same of any stock, bond or scrip among its stockholders unless authorized by the commission so to do.

SEC. 36. No franchise granted to a common carrier or public utility governed by the provisions of this act shall be assigned, transferred or leased, nor shall any contract or agreement with reference to or affecting such franchise or right thereunder be valid or of any force or effect whatsoever, unless the assignment, transfer, lease, contract or agreement shall have been approved by the commission.

SEC. 37. Any person who shall willfully make any false entry in the accounts, books of account, records, or memoranda kept by any common carrier or any public utility governed by the provisions of this act, or who shall willfully destroy, mutilate, alter or by any other means

or device falsify the record of any such account, book of accounts, record or memorandum, or who shall willfully neglect or fail to make full, true and correct entries of such account, book of accounts, record or memorandum of all facts and transactions appertaining to such common carriers or public utilities business, or who shall falsely make any statement required to be made to the Public Utilities Commission, shall be deemed guilty of a felony, and upon the conviction shall be punished by a fine of not less than one thousand dollars nor more than five thousand dollars, or by imprisonment of not less than one year nor more than three years, or by both such fine and imprisonment; provided, that the commission may in its discretion issue orders specifying such operating, accounting or financial papers, records, books, blanks, tickets, stubs or documents, of carriers which may after a reasonable time be destroyed, and prescribing a length of time such books, papers or documents shall be preserved; and provided, further, that such orders shall be in harmony with those of the Interstate Commerce Commission.

SEC. 38. If any common carrier or public utility governed by the provisions of this act shall violate any of the provisions of this act, or shall do any act herein prohibited, or shall fail or refuse to perform any duty enjoined upon it in this act, or shall fail, neglect or refuse to obey any lawful requirement or order made by the commissioners, or any final judgment or decree made by any court upon appeal from any order of the commissioners, it shall, for every such violation, failure or refusal, forfeit and pay to the support of the common schools a sum not less than one hundred dollars and not more than one thousand dollars for such offense. Such forfeiture shall be enforced and collected by the attorney-general in any court of competent jurisdiction. In construing and enforcing the provisions of this act, any act, omission or failure of any officer, agent or other person acting for or employed by any such public utility or common carrier while acting within the scope of his employment, shall in every case be deemed to be the act, omission or failure of such public utility or common carrier, and every day during which any such public utility or common carrier or officer, agent or employee thereof, shall fail to comply with any order or direction of the commissioner, or to perform any duty required or enjoined by this act, shall constitute a separate and distinct violation of the provisions of this act.

SEC. 39. The commission may compel compliance with the provisions of this act and compel compliance with the orders of the commission by proceeding in mandamus, injunction or other appropriate civil remedies, or by appropriate criminal proceedings in any court of competent jurisdiction.

SEC. 40. The rights and remedies given by this act shall be construed as cumulative of all other laws in force in this state relating to common carriers and public utilities, and shall not repeal any other remedies or rights now existing in this state for the enforcement of the duties and obligations of public utilities and common carriers or the rights of the Public Utilities Commission to regulate and control the same except where inconsistent with the provisions of this act.

SEC. 41. The provisions of this act and all grants of power, authority and jurisdiction herein made to the commissioners, shall be liberally construed, and all incidental powers necessary to carry into effect the provisions of this act are hereby expressly granted to and conferred upon the commissioners.

SEC. 42. Nothing in this act shall affect pending actions or proceedings brought by or against the Board of Railroad Commissioners of this state, but the same may be prosecuted or defended by, and in the name of the commission hereby created. Any investigation, examination, or proceeding undertaken, commenced or instituted by the said Board of Railroad Commissioners prior to the taking effect of this act may be conducted and continued to a final determination by the commission

hereby created, under the same terms and conditions and with like effect as though such Board of Railroad Commissioners had not been abolished.

SEC. 43. If any interstate rate, joint rate, fare toll, charge, rule or regulation, classification or schedule of rates, joint rates, fares or tolls, is found to be unjust, unreasonable, excessive, unjustly discriminatory, or unduly preferential, or in violation of, the interstate commerce law, or in conflict with the rules, orders or regulations of the Interstate Commerce Commission, the Public Utilities Commission may apply by petition or other proper method to the Interstate Commerce Commission for relief.

SEC. 43a. That original sections 7063, 7064, 7065 and 7066 of the General Statutes of Kansas of 1909, be and the same are hereby repealed.

SEC. 44. This act shall take effect and be in force from and after its publication in the statute book.

## RULES OF PRACTICE.

### REGULAR SESSIONS.

I. The regular sessions of the Commission shall be held at its office in the capitol building, in the city of Topeka, on Monday of each week, commencing at the hour of eleven o'clock A. M., and continuing from day to day until the business of the Commission is completed, unless an adjournment is had for good and sufficient reasons.

### SPECIAL SESSIONS.

II. Special sessions may be held at such times and places as a majority of the Commission deems expedient, reasonable notice thereof being given all interested parties.

### COMPLAINTS.

III. All complaints must be in writing, setting forth briefly the facts claimed to constitute a violation of law, and must be signed and verified by the petitioner, who must be a party in interest. The name of the common carrier or public utility complained against must be stated in full, and the address of the petitioner, with the name and address of his attorney, if any, must appear in the petition.

Complaint may be filed with the secretary at any time by any person, mercantile, agricultural or manufacturing organization or society, or by any body politic or municipal organization, or by any taxpayer, firm, corporation or association, or the attorney for the Commission.

### SERVICE.

IV. Upon the filing of proper complaint involving matters over which the Commission has jurisdiction, the secretary shall forthwith cause a copy of the same to be served upon each party defendant, notifying the defendant or defendants that the answer must be made in a specified time, and, if complainant so desires, assigning the case for hearing upon thirty days' notice.

### ANSWER.

V. The answer shall be in writing, stating the reasons why the prayer of the complainant should or should not be allowed, and must be filed with the Commission within ten days from the date of service of copy of the complaint, except in special cases, when answer may be required in less time by the Commission. For good cause shown, the Commission may allow answer to be filed after the expiration of the time aforesaid, but the same shall not operate to delay the hearing upon the complaint.

### AMENDMENTS.

VI. Upon application by any petitioner or party in interest, amendments to any petition or answer in any proceedings before the Commission may be allowed, in the discretion of the commissioners.

### EXTENSION OF TIME.

VII. Extension of time in which to plead may be granted, in the discretion of the commissioners, upon application of any party to the proceeding.

**STIPULATIONS.**

VIII. The parties to any proceeding before the Commission may stipulate in writing and agree upon the facts, or any portion thereof, involved in the controversy, and such stipulation shall be considered and regarded as evidence at the hearing.

**INTERVENTION.**

IX. The right to intervene, answer or plead in any proceeding before the Commission, and to be heard upon any question involved in any investigation or controversy, may be given to any person, common carrier or public utility not a party to the proceedings, upon such terms and conditions as the commissioners may deem equitable and just; or the commissioners may, in their discretion, deny such privilege.

**HEARINGS.**

X. The secretary shall assign a time and place for hearing all cases, giving all interested parties due notice thereof; the hearing shall be at the office of the Commission in Topeka, unless otherwise ordered. Witnesses may be examined orally before the Commission, and their testimony taken and filed in the case, unless the facts be agreed upon as heretofore provided. The complainant must in all cases establish the facts alleged to constitute a violation of law, unless the common carrier or public utility complained against admits the same. Facts alleged in the answer must also be proved by the common carrier or public utility, unless admitted by the petitioner. In case of failure to answer, the Commission will take such proof of the facts as may be deemed proper and reasonable and make such order thereon as the circumstances of the case require.

# WESTERN UNIVERSITY.

QUINDARO, KAN., December 7, 1912.

*His Excellency, Governor W. R. Stubbs:*

DEAR SIR—As trustees of the State Industrial Department of Western University, we beg to submit our biennial report for the period from December 1, 1910, to December 1, 1912, with estimates for the ensuing two years.

Dr. H. T. Kealing, the superintendent, took charge of the work here November 1, 1910, and at once began to familiarize himself with conditions and put into operation plans for the advancement and improvement of the school. His long and varied experience in the educational field, as teacher, principal and supervisor of public schools, and as assistant principal and president of two colleges, gave him quick apprehension, so that only one month after his inauguration, when it became necessary to make his biennial report to the governor and to present his budget of appropriations, he outlined a course of systematic expansion and a heightening of standards which we were glad to approve. They also met the indorsement of the governor and the legislature, and the following appropriations were unanimously allowed for the two years beginning June 1, 1911, and ending June 30, 1913:

FOR FISCAL YEARS ENDING JUNE 30, 1912, AND JUNE 30, 1913.

	1911.	1912.	1913.
Maintenance .....		\$30,000	\$30,000
For completion of girls' dormitory .....	\$10,000	.....	.....
Repairs on Stanley Hall .....	.....	7,000	.....
Equipment and industrial supplies .....	.....	3,000	3,000
Laundry building and machinery .....	.....	8,000	.....
Extension boys' trades building and equip- ment .....	.....	5,000	.....
Seller for central heating plant .....	.....	2,500	.....
Library .....	.....	500	500
Landscape gardening and improvement of grounds .....	.....	500	500
Tank .....	.....	2,500	.....
Gymnasium .....	.....	300	300
Material for rock retaining wall .....	.....	500	.....
Barn .....	.....	1,500	.....
Agricultural supplies .....	.....	1,500	1,000
Purchase of cows .....	.....	250	.....
Purchase of horses .....	.....	350	.....

This is a total for all purposes of \$106,698.

At that time Western University had an incompleated girls' dormitory, insufficient heating facilities, no dependable water supply, no modern toilet facilities with scientific disposal of sewage, and only eight industries taught. Besides, several of the buildings, notably Stanley Hall, used as a boys' dormitory and for offices, were in a more or less dilapidated and unfinished condition. There was only an old shell of a frame barn and no place for the storage and protection of tools and implements. The live stock consisted of three horses, all quite old.

The course of study did not extend beyond four years of so-called normal work, equivalent to the average high-school course, two years of which were required for graduation in any of the trades or industries taught. Discipline was exceedingly difficult, and flagrant violations of the rules no uncommon thing.

We are pleased to say that in all these matters there has been a marked and in some of them a remarkable improvement, as the following citation of specific cases will show:

Grant Hall, the girls' dormitory, has been finished at an additional cost of \$10,998; a second 60-horsepower boiler has been put in and another building connected to the central heating plant; the old tank, supplied from a spring which finally failed, has given place to the Kansas City water supply; a large scientific septic tank, serving satisfactorily three buildings, with pipes and connections, has been built under the direction of the State Board of Health; Stanley Hall has been renovated and repaired inside and out in a very thorough manner, at a cost of \$7000, and a new and commodious store-room for supplies fitted up in the basement, resulting in the saving of hundreds of dollars' worth of material and equipment; and a new brick barn takes the place of the old frame structure, built, too, under the supervision of our own teachers and, in part, with student labor; cows, horses, implements, conveyances, hay and other feed and dairy equipment have all been housed in this barn, instead of being exposed, as was necessarily true before it was erected; four cows and two valuable horses have been purchased and the old, failing horses sold; an extension has been added to the boys' trades building, increasing its capacity for housing the industries by one-third, and at a cost of less than \$4000; a brick steam laundry, under our own building supervision, has been erected, equipped and

is now in successful operation, constituting a new and very much needed industry. We are indebted to Tuskegee Institute, Alabama, for the donation of two good mangles for this laundry.

A retaining wall, greatly needed, has been built around the east and south sides of the campus and at the head of a deep ravine, preserving the soil; cinder and brick sidewalks have been laid, shrubs planted and some roadways improved. A two years' course above the normal has been added to our curriculum, and in other ways we have conformed to the requirements of the times, especially in the addition of a course in agriculture for teachers of public schools.

By the liberal appropriation of the last legislature, the number of industries taught has been increased from eight to over twenty.

The following table shows the old and the new industries :

INDUSTRIES TAUGHT PREVIOUS TO 1910.

For Boys.	For Girls.
1. Tailoring.	1. Sewing and dressmaking, and
2. Commercial science.	2. Millinery (combined).
3. Carpentry and cabinetmaking.	3. Domestic science.
4. Blacksmithing and wheelwrighting.	4. Commercial science.

A total of eight trades.

INDUSTRIES INTRODUCED SINCE 1910.

For Boys.	For Girls.
1. Steam and electrical engineering.	1. Millinery (separated).
2. Agronomy and dairying.	2. Mattress making, raffia.
3. Shoemaking.	3. Beadwork and upholstering.
4. Harness making and carriage trimming.	4. Steam laundering.
5. Bricklaying and plastering.	5. Nurse training.

A total of twelve trades.

All these new departments have been more or less well equipped and have been in actual operation. Owing to the poor demand, the bricklaying and plastering departments have been temporarily suspended. The intention is not, however, to abandon instruction in these trades permanently.

A first-class music department, employing four teachers and largely attended, is also maintained by the state.

The teaching force has grown in the same time from 15 to 28, in other words has been nearly doubled, while the whole faculty numbers 29. All the additions, save two, have been in the industrial department.

**ASSOCIATED ACTIVITIES.**

Besides the regular classroom work for nine months in the year, neighborhood extension lectures have been given to the people outside of the school by our industrial teachers on subjects of practical value in the home life of the fathers and mothers of our youth.

For the last two years a summer school has been maintained as an experiment. The success has been sufficient to warrant the belief that if the State Educational Department will allow state examinations and award teachers' certificates to those passing at the end of the session, a large attendance of teachers and advanced students would result. The cost of such a summer school could be kept within \$3000, some of which would be returned in fees and tuition.

The last legislature appropriated \$2500, for two years, for the beginning of agricultural work and instruction. With this money implements and seed were purchased, ground prepared and planted, fences repaired, a small dairy room fitted up and partly equipped, labor employed, and a general start made in the development of the department—to our mind, one of the most important in the school and one in which Kansas, as an agricultural state, has the greatest interest.

The attendance has been small, especially from Kansas students, as our young people seem to look toward the attractions of city life rather than the freer, more independent and prosperous life on the farm. Since, however, our conception of a school's work is that it should create a desire for that which is best, as well as train for it, we feel that the greater reason for persevering exists because of this injurious tendency toward the city. It is the policy of Superintendent Kealing and this Board to guide the youth of this race into those happy and profitable channels of soil cultivation which are being so generally and wonderfully exploited by Caucasian Americans.

It is true the soil of Western University is not ideally adapted to general agriculture, being rough and hilly, though under scientific treatment it will bring fair results even in that; but it is splendidly adapted for fruit and truck gardening, for dairying and poultry raising, and besides, being at the door of Kansas City, it offers an opportunity both for instruction and profitable marketing that very few schools have. We are, therefore, asking that the appropriation be continued, so that the young men of Kansas may be educated to see and in-

duced to desire the advantages which scientific soil cultivation holds for them.

#### MORALE AND DISCIPLINE.

The discipline of the school was never better. The material evidences of growth, such as buildings, equipments and new departments, can of course be seen by the most casual observer; but, to our mind, the toning up in conduct and refinement, the rising loyalty and enthusiasm of the student body, the increasing sense of honor and the readier response to moral suasion—these and other tangible but real and rapid evidences of character formation are the true tests of the efficiency of a school as an agency for creating noble manhood and better citizenship. To these evidences at Western University we can point with pleasure and pride; and they are the up-growth of the educational policies, standards and personal example of the superintendent and his associates. The school is no longer an experiment, but a necessary arm and engine of the state in the development of better men and women.

#### WHAT OUR GRADUATES ARE DOING.

Figures taken from the registrar's records show that for the five years past there has been a total registration of 1481 students. The enrollment for this year is already 256, 105 of whom are from Kansas. Usually a considerable number of new students come in after Christmas, while the enrollment above is only to December 1, 1912. The regular enrollment last year was 338. We probably shall not quite reach that figure this year, because the burning of the boys' dormitory, April 4, 1912, left us short of room, and many have remained away, because they felt that they could not be accommodated. As a matter of fact, we have as many boys now as we can take without crowding.

Not until the year 1907 did one of our graduates enter a university for further study, and then an examination was required, while during the last four years twelve graduates have entered higher institutions without entrance examinations. This bespeaks better work here, of course. From the year 1900 to 1912 this institution has sent out 285 graduates. The first graduating class (1900) contained 8 persons; the last (1912), 89.

The question is frequently asked, "What are your graduates doing?" Here is a partial answer: One is a wealthy stock-dealer and farmer in western Kansas, controlling and owning

1000 acres of land; one is engaged in the clothing business in Moberly, Mo.; one is a practicing physician in Kansas City, Kan.; six are clergymen located in different sections; seven are now officially connected with their alma mater, to wit, as librarian, assistant in science and mathematics, assistants in music, assistant in the commercial department, stenographer in the fiscal agent's office, registrar and bandmaster. Forty-five are teaching school in Kansas, Missouri, Oklahoma, Alabama, Kentucky, Arizona and Washington, D. C., and one in the auditor's office at Tuskegee Institute. Twenty-one are pursuing higher courses in universities from Boston to California; three have received degrees from other colleges; one a diploma from Howard University; five have enlisted in the United States army, one of whom is a noncommissioned officer; one served three years as a noncommissioned officer in the Philippines, receiving an honorable discharge and several medals as an expert marksman; one has served as secretary to ex-Congressman Meikeljohn of Nebraska; five are successful farmers; one is a general bookkeeper in a negro bank; one is a secretary of a real estate corporation in Texas; ten are engaged in dress-making and tailoring; four are serving as government railway postal clerks; nineteen are stenographers; eight are music teachers; and six are trained nurses.

It will be seen from the above facts that Western University graduates do not, as a rule, disappear from view; but, instead, enter into active and productive life.

I have also been asked, "What use has been made of the appropriation of \$105,698 given by the last legislature?" While the figures in the minutest detail will be found appended to this report, it is well to state succinctly and in general outline the directions of expenditures:

The sum of \$60,000 was given for maintenance for two years. This sum has been used for salaries, wages, and for industrial supplies for the twenty-odd departments. The fixed salary roll is about \$2400 a month for nine months or a scholastic year. Some coal and the freight on all coal has been taken from this fund also.

The sum of \$10,998 was spent to complete Grant Hall, the new girls' dormitory; \$7000 was used for the complete renovation and repair of Stanley Hall, used for offices, classrooms and dormitory. This includes modern toilet facilities and connections.

For the two years, \$6000 was allowed for equipment and supplies of departments. This was not sufficient for full equipment, and was all used. The \$3000 for laundry building and machinery was so expended. Of the \$6000 allowed for an extension of the boys' trades building, \$4915 was so expended and \$1085 reverted to the state treasury.

For a new boiler in the central heating plant \$2500 was allowed; \$2491.70 of this was expended. Of the library fund \$267 reverted to the state treasury. Of the landscape fund \$257.07 reverted. Of the \$2500 appropriated for a water tank \$872.50 reverted after securing, for \$1627.50 spent, the most abundant water supply we have ever had. Of the \$600 for gymnasium \$44.68 reverted. Of the \$500 for retaining wall \$28.56 reverted. The \$1500 for a barn was so used, giving us a building worth over \$2500 by the contract being taken by one of the industrial departments of the school. The appropriation for agriculture was \$2500. This has been or is in the process of being used. It is a small amount for the purpose, but a creditable showing has been made with it. The appropriations of \$250 for cows and \$350 for horses have been used for those purposes.

Owing to the lack of an appropriation for fuel and freight, through oversight, and a number of unforeseen demands, there is a deficiency of \$2400 in certain funds, but to offset this there is a reversion of \$2832.71 in other funds, as shown above, so that the legislature in voting this deficiency does not increase by one cent the amount necessary for the expenses for the last two years; and when it is taken into account that our estimates for two years' maintenance were cut down by the amount of \$20,000, requiring a readjustment of our plans accordingly, we feel that the evidence of wise and economical management is conclusive. The closest scrutiny is invited.

We have carefully canvassed the needs of the institution for the next two years, and after the closest elimination of all discardable items we present the following budget of appropriations as necessary for the maintenance and operation of the school:

Following is the budget of appropriations from July 1, 1913, to June 30, 1915, for Western University State Industrial Department:

	1914.	1915.
Maintenance .....	\$40,000	\$40,000
Equipment .....	7,000	7,000
Superintendent's residence .....	6,000	.....
Library .....	400	400
Campus and landscape.....	400	400
Gymnasium and athletics.....	500	500
Agriculture, dairying, live-stock raising.....	2,800	1,500
Engineering laboratory .....	2,750	1,750
Coal and freight.....	1,700	1,700
Summer school and neighborhood extension.....	1,000	1,000
Additions and repairs.....	3,000	3,000
Traveling expenses, executive officers and trustees, and contingencies .....	500	500
Nurse training .....	700	700
<b>DEFICIENCIES.</b>		
Wyandotte Coal and Lime Company, builders' supplies.....		\$593.33
Foster Lumber Company, builders' supplies.....		411.45
Missouri Pacific Railway Company, freight and demurrage..		323.89
English Tool and Supply Company, tools and supplies.....		453.12
Emery, Bird, Thayer Dry Goods Company, merchandise.....		142.48
George R. Spaulding & Son, extra labor and supplies on girls' dormitory .....		400.00
Total .....		\$2,884.32

In conclusion, we desire to express our appreciation for the deep interest which the governor and the legislature have shown in this important institution. It has been a pleasure and a privilege to us to give our best services to its expansion and betterment and we look forward to years of greater and greater growth until the school shall fulfill its destiny.

Respectfully submitted.

# BOARD OF REGENTS' REPORT.

THE UNIVERSITY OF KANSAS,

LAWRENCE, July 1, 1912.

*To the Honorable Governor of the State of Kansas:*

The Board of Regents of the University of Kansas has the honor to make the following report in regard to the University for the two years ending June 30, 1912:

## ENROLLMENT.

The enrollment of the University during the two years just passed has been satisfactory. Conditions in the state have not justified rapid growth in college or university enrollment. The total enrollment for the years 1910-'11 and 1911-'12 was 4837, being 2400 for the first year and 2437 for the second year of the biennium. The total enrollment for the biennium just preceding was 4513, making a total increase during the last two years of 324. Besides this the summer school of health officers held at the University has totaled 94, and a large number have received instruction in some form through the department of University Extension.

## DEGREES GRANTED.

The number of degrees granted by the University is increasing rapidly.

During the year 1910-'11 the following degrees were granted:

Doctor of Philosophy .....	1
Mining Engineer .....	1
Civil Engineer .....	1
Master of Arts .....	38
Master of Science .....	5
Bachelor of Arts .....	183
Bachelor of Science .....	55
Bachelor of Music .....	12
Certificate of Expression .....	4
Bachelor of Painting .....	5
Bachelor of Laws .....	55
Pharmaceutical Chemist .....	10
Doctor of Medicine .....	18
Certificate for Graduating Nurses in Medicine and Surgery .....	4
Bachelor of Science in Educa- tion .....	3
University Teachers' Diploma,	48
<b>TOTAL .....</b>	<b>443</b>

During the year 1911-'12 the following degrees were granted:

Mining Engineer .....	1
Electrical Engineer .....	1
Master of Science .....	2
Master of Arts .....	43
Bachelor of Arts .....	188
Bachelor of Science .....	51
Bachelor of Music .....	16
Bachelor of Painting .....	4
Certificate in expression .....	3
Teacher's Certificate in Piano,	4
Teacher's Certificate in Draw- ing and Painting .....	2
Bachelor of Laws .....	56
Bachelor of Science in Phar- macy .....	1
Pharmaceutical Chemist .....	14
Doctor of Medicine .....	14
Certificate for Graduate Nurse,	5
Bachelor of Science in Educa- tion .....	7
University Teacher's Diploma,	68
<b>TOTAL .....</b>	<b>480</b>

## SCHOLARSHIP.

The standard of scholarship of the University has been steadily rising. The Registrar of the University recently made a careful examination into the scholarship standing of the institution, and his exhaustive report in that regard is worthy of consideration. The report covers a tabulated study of university scholarship for the year 1910-'11. Being the first complete and exhaustive report that has been made at the University, it serves as a basis for comparison for all succeeding years, and each year hereafter a complete survey of the scholarship standing of the institution will be made. A summary of the report shows that but 1.9 per cent of the men were total failures and but 0.29 per cent of the women; that taking the University as a whole, both men and women, but 1.3 per cent were total failures. The most accurate indication of scholarship standing of the University, however, is shown by the percentage of hours failed and the percentage of hours passed. The report shows that among the men there were 88.09 per cent hours passed and 11.91 per cent of hours failed; that among the women there were 94.9 per cent hours passed and 5.1 per cent hours failed. Taking the University as a whole, men and women together, there were 90.2 per cent hours passed and 9.8 per cent hours failed. There were 54,020 hours of work carried during the year, 34.2 per cent receiving the highest scholarship mark of "I," 35.7 per cent, the second scholarship mark of "II," and but 20.3 per cent, the lowest scholarship mark of "III."

The University still maintains its position in the Association of American Universities, being one of the twenty-two standard scholarship institutions in North America. It desires to maintain its standing as one of the few standard universities.

## NUMBER OF UNIVERSITY TEACHERS.

There are at the University (year 1911-'12) 174 teachers rendering full service on salary to the institution. These are of the following grades: 48 professors, 29 associate professors, 51 assistant professors, 46 instructors. Of this number 9 give their entire time to state work. There are also 12 assistants who give a part of their time to teaching, making a total of 186. As a matter of comparison it is interesting to notice that the catalogue of one of the large state universities

shows a total of 523 teachers as compared with 186 teachers in the University of Kansas. The enrollment at the university in question is 4927, and that of the University of Kansas 2437. In other words, the teaching force at the University of Kansas is below, in numbers, the requirement for the best service.

#### NUMBER OF HOURS WORK.

The report of the Committee on Efficiency of the Commission on Higher Education, formed by the joint boards of the three state institutions, shows that the teaching force of the University is pushed to the limit of endurance. A considerable increase in the teaching force should be provided at once.

#### SALARIES.

The salaries at the University of Kansas are altogether too low. The discrepancy between the salaries at the University of Kansas and those of other institutions with which we must necessarily compete is too great. Generally speaking, to maintain a high standard of scholarship and teaching efficiency it is necessary that the salaries here, after allowing for difference in location, cost of living and the general standard of community expense, should be about the same as in other standard institutions. In this regard the University of Kansas falls far below nearly all other institutions of its class, and its efficiency is endangered constantly by the drawing off of excellent men to other institutions. The University of Kansas has lost a large number of promising men during the last few years, notably among others, Professor William C. Hoad, who has been of such practical service to the state. It is imperative that the salaries be increased at once.

#### STATE WORK.

The state service work of the University has grown to very large proportions. The University of Kansas seems to have been one of the very first institutions in America to respond to this need of serving the state. It began formally in the year 1868, when the Chancellor of the University was made State Sealer of Public Weights and Measures, and has increased until the volume of work done by the University of Kansas is perhaps second to no other institution except the University of Wisconsin. It is probable, also, that according to the amount of its income the volume of state service work done here is as great as that in any other university. During the

past two years the University has added new lines of state service work, because of the very strong demand for the help of the University in many new lines of activity. The University is now giving the full time of one professor to the Public Utilities Commission; the time of one man to the State Board of Health, in connection with water supply and sewage disposal; the full time of one professor to the development of state fish hatcheries; the time of three men to the State Board of Health in drug laboratories, two in the food laboratories, two men in the water analysis laboratory; and will, beginning in September, 1912, give the greater part of the time of one man to the bacteriological work of the state. In addition it gives, in total, a vast amount of time through a large number of teachers who serve the state intermittently, as does the Engineering School in connection with the "blue sky" law in determining whether certain inventions are worthy to be put on the market, the Utilities Commission in connection with the supply of natural gas and the correctness of gas meters, and so on through an almost numberless array of different state activities. Many of these have had to be assumed since the legislature made its last appropriation and were not counted on in the budget. The total amount of funds that must go annually to them is estimated to be about \$50,000. Their support has brought a very great pressure upon the University in connection with its most important activity, namely, its function as a teaching institution. It would be nothing short of suicidal to have a lesser function, like that of state service, cripple the first and most important function of an institution for which it was first established and in which it may do its greatest service to the community. The University, therefore, should be provided with ample funds to take care of all the state service work without in the least encroaching upon funds necessary for an ample adjustment of its teaching relations.

## A SURVEY OF THE STATE SERVICE WORK OF THE UNIVERSITY OF KANSAS.

Unless otherwise stated, this state service work is done by the members of the faculty in an official capacity through the University. So far as possible the work is classified under the various schools of the University. Where the work is being done for the state or federal government, attention is called to that fact.

### THE SCHOOL OF ENGINEERING.

1. Investigations for the State Bank Commissioner, under the "blue sky" law, of new schemes, which may be good or bad, by companies for various kinds. Among the subjects investigated are a perfection oil burner, an adjustable hub plate, and a new type of electric battery.

2. Physical valuation of the railroads of Kansas for the Kansas Public Utilities Commission. The entire time of one member of the faculty of the School of Engineering is devoted to this work.

3. An inquiry into the supply of gas available to Kansas City, Mo. (Unofficial.)

4. The testing of Kansas brick.

5. An investigation of the heat value of Kansas coals and the lubricating value of Kansas oils.

6. The testing of gas meters.

7. The testing of cements.

8. Advisory service on reinforced concrete construction. (Unofficial.)

9. A study of the gas supply of Kansas for the Kansas Public Utilities Commission.

10. The calibration of electrical measuring instruments.

11. Advice on flood prevention and drainage plans. (Unofficial.)

12. Testing of Kansas stone for use in road building.

13. The installation and inspection of municipal electric lighting plants.

14. Work for the State Board of Health. A member of the faculty of the School of Engineering is by law made the engineer for the State Board of Health, for the purpose of carry-

ing into effect the provisions of the act of the state legislature to preserve the purity of the waters of the state, for the protection of the public health, etc. It is the duty of this engineer to investigate and report upon all matters relating to water supply and sewerage and the pollution of the waters of the state that may come before the State Board of Health for investigation and action, and to make such recommendations in relation thereto as he may deem wise and proper. Hence all water supply and sewerage plans are approved by him. An assistant engineer is also employed for this work.

#### THE SCHOOL OF PHARMACY.

1. Investigation of poisonous plants, as, for example, the loco weed.
2. Official post-mortem examinations in certain poisons.
3. Assistance in the revision of the United States Pharmacopœia.
4. Finding a working standard for medicinal preparations, *i. e.*, nitroglycerine, for the United States Bureau of Chemistry.
5. Examination of spices, teas, coffees, etc.
6. Microscopical work relating to the adulteration of powdered cereals, flours, breakfast foods, etc.
7. Drug analysis:
  - a. For State Board of Health, in connection with inspection work.
  - b. For manufacturing interests of the state and dealers in linseed and other oils.
  - c. For professional men and the public.
  - d. The standardization of different insecticides used in orchards, etc.

#### THE COLLEGE OF LIBERAL ARTS AND SCIENCES.

1. The furnishing of material from the University zoological expeditions to the high schools and colleges of the state.
2. Sociological work in the state penitentiary and reformatories.
3. Sending out University athletes to the high schools of the state for assistance in training.
4. Study of the clays of the state, with reference to ceramics and art pottery.

5. *The Chemistry Department.*

- a. A study of helium in the natural gas of Kansas.
- b. Investigation into the composition of Kansas coal.
- c. The chemical analysis of Kansas coal.
- d. The chemical analysis of Kansas salt.

6. *The Department of Entomology.*

- a. The inspection of nurseries.
- b. Orchard management and culture.
- c. A study of the sand fly and pellagra.
- d. Entomological Commission of the state. This Commission was established by the state legislature for the purpose of suppressing and eradicating San José scale and other dangerous insect pests and plant diseases throughout the state. The professor of entomology of the University is a member of this Commission.
- e. A study of the insect problems of Kansas: Chinch bug, grasshoppers, San José scale, wheat and alfalfa pests, green bug.

7. *Food Analysis.*

- a. For any purchasers who suspect food adulteration.
- b. Advice to manufacturers regarding the observance of the pure food law.
- c. Advice to manufacturers regarding the manufacture of foods.
- d. Investigations of special problems in foods.
- e. The analysis of certain lines of foods when the quantities are too small to warrant the employment of a chemist, as the testing of vinegar for the farmers of the state.
- f. Analysis for the State Board of Health under the pure food law. The department of chemistry is by law required to make a thorough and complete analysis of all samples of food products and beverages manufactured or prepared for domestic use which the Board of Health of the state, or any county or city board of health, may send to it. A report must be made to the State Board of Health giving a correct analysis of all such samples of food or beverages, together with the name of the article or sample analyzed and of its manufacturer, if it is known to the chemist in charge.

8. *Bacteriological Analysis of Water.*

- a. For the school boards of Kansas.
- b. For private individuals.
- c. Analysis of city supplies.
- d. For the physicians of the state.
- e. For corporations of the state. Analysis has recently been made of water to be used by a pop manufacturer and by several mineral spring companies.
- f. For the State Board of Health.

9. *Water Analysis, Chemical.*

- a. Analysis of the natural waters of Kansas for the United States Geological Survey.
- b. Complete analysis of city supplies.
- c. Analysis of proposed water supplies.
- d. Work for school boards of the state in the analysis of supplies.
- e. Analysis for the State Board of Health.

10. *Fellowships in Industrial Chemistry.*

- a. The chemistry of laundering.
- b. The study of diastase and the manufacture of a scientific fodder.
- c. The chemistry of bread, or the making of salt-rising bread in commercial quantities.
- d. The utilization of the constituents of waste buttermilk from the butter factories, or the commercial extraction of casein from buttermilk.
- e. The extraction of utilizable constituents from crude petroleum.
- f. Improvements in composition of enamel for enamel-lined steel tanks.
- g. The relation between the optical properties of glass and its chemical constitution, or the improvement of glass for electric light reflectors.
- h. Improvements in the manufacture of Portland cement and lime.
- i. An investigation into the extractive principles of the glands of deep-sea mammals, for medical purposes.
- k. An investigation into the chemical treatment of wood; also, a study of insoluble lacquers for brass, and adhesive and synthetic plasters.

10. *Fellowships in Industrial Chemistry.*

- l. The discovery of new utilities for borax.
- m. A study of improvements in the dyeing of vegetable ivory and the utilization of vegetable ivory waste.

THE SCHOOL OF EDUCATION.

- 1. High School Visitation, constituting a service bureau for the benefit of the public schools of the state.
- 2. Certification of high school teachers.
- 3. Work for defective children.
- 4. The recommendation and placing of teachers, principals and superintendents in the schools of the state.
- 5. An analysis of the school systems of the state.
- 6. The organization and direction of school conferences.
- 7. Medical inspection.
- 8. Coöperation with county institutes, teachers' associations, and similar bodies.

THE SCHOOL OF MEDICINE.

- 1. The analysis of sputum and cancerous tissues for the physicians of the state.
- 2. Original medical research in the case of certain diseases or epidemics, as infantile paralysis and pellagra.
- 3. Special lecturer on tuberculosis for the State Board of Health. At the request of the Secretary of the Board of Health a member of the University faculty was relieved from most of his regular work at the University by the Board of Regents and given a leave of absence for two years in order that the University might aid the State Board of Health in undertaking this important work.
- 4. Laboratory tests for the diagnosis of typhoid fever, hydrophobia, etc. Preventative treatment to persons bitten by rabid animals.
- 5. The State Hospital:
  - a. Work for crippled and deformed children. By an act of the legislature in 1911 it becomes the duty of any physician in attendance upon any child of any indigent poor person of the state, which child shall be afflicted with any deformity or malady that may be cured by surgical opera-

## 5. The State Hospital:

- tion or by hospital treatment, to report the same, and if in his opinion the malady is curable, to provide transportation for such child to the state hospital conducted by the University of Kansas. No compensation other than the salary received from the Regents shall be charged or allowed to those treating the child.
- b. Inmates of county or city almshouses, or indigent poor, in need of hospital treatment, after certain applications and recommendations are made, shall be received for care and treatment in the hospital conducted by the Regents of the University. No compensation in addition to the regular salary shall be received by those doing this work.
- c. The legislature of the state has also provided that the county boards of health may make a special contract with the Regents of the University of Kansas for the care and maintenance in the hospital conducted by the University of Kansas of such obstetrical patients as are public charges in their respective institutions, provided it is necessary to secure professional attention other than that furnished by the institutions of which such public charges are inmates.

The Dean of the School of Medicine of the University of Kansas is also the Secretary of the State Board of Health.

## THE UNIVERSITY EXTENSION DIVISION.

1. Department of Correspondence-Study. Correspondence courses for home study, numbering more than one hundred and fifty, are offered in the following schools: The College of Liberal Arts and Sciences, the Schools of Education, Engineering and Pharmacy. All of the high-school branches excepting the sciences are offered.

2. In the Department of Lecture-Study over seven hundred lectures are available to the communities and organizations of the state. Practically one-half of these lectures, either in groups of six or in series of twelve, may be given for University credit. Others are illustrated and accompanied by ex-

periments. Still others are for commencements and other special occasions.

In this department a Lantern Slide Bureau has been organized, which furnishes to the high schools of the state, principally, sets of lantern slides on subjects of particular importance to high-school students, though the sets have also been shown to different organizations and to the general public. These sets, numbering twelve or more, are loaned without charge, excepting the cost of transportation.

3. The Department of Debating and Public Discussion furnishes to private citizens, schools, societies, etc., of the state, material for the preparation of debates, papers, speeches and orations. This work is done largely through a system of package-libraries, made up of clippings, magazine articles, speeches, special books, monographs, etc., which are sent to all parts of the state at no expense excepting postage. From the first of September, 1911, to May 9, 1912, a total of 2439 package-libraries were sent out from the extension office.

A State High School Debating League was organized under this department. Through it, by a process of elimination based on congressional districts, the high-school debating championship of the state is decided.

4. The Department of General Information and Welfare makes knowledge of all sorts more generally available to the people of Kansas. Through its various divisions, this department is of service to numberless organizations of the state.

A Municipal Reference Bureau has been established, which acts as a clearing-house for information and ideas concerning all kinds of municipal problems, such as those concerned with city charters, sanitation, waterworks and other public utilities, franchises, etc.

In connection with the Municipal Reference Bureau a League of Kansas Municipalities has been organized. Membership is made up of Kansas cities, whose officials meet in convention each year to discuss municipal problems and exchange ideas. The secretary-treasurer of the League is the Director of the University Extension Division.

A large amount of work is done for the women's clubs of the state, by preparing programs and courses of study and furnishing bibliographies and material for papers and discussions.

In this department, also, a Bureau of Civic and Social Center Development has been organized, which offers assistance in the organization and promotion of civic and social centers and neighborhood clubs, and in the arrangement of programs and furnishing of material for discussions, etc.

#### WEIGHTS AND MEASURES.

By act of the legislature the Chancellor of the University is *ex officio* state sealer of weights and measures, and has the care and custody of the authorized public standards of weights and measures and balances and other apparatus of all kinds owned by the state. The deputy state sealer is also a member of the University faculty. All county, municipal and other official standard weights and measures, balances and measuring devices shall be compared and adjusted by the state standards, when brought to the deputy sealer for that purpose, and he shall seal the same when found or made to conform to such standards.

Instructions are issued governing the method of procedure for all inspectors and sealers. Much useful information is gathered and distributed concerning weights and measures. The state sealer may also try and prove weights, measures, etc., on request, for any person, corporation, or institution.

#### FISH AND GAME WARDENSHIP.

The Board of Regents of the University, upon the death of the former fish and game warden, offered to the Governor of the state the services of a member of the University faculty, the curator of the mammals, birds and fishes, until the legislature should make other provisions. This member of the faculty has been relieved from so much of his regular duties at the University as may be necessary to put the work of the fish and game wardenship upon a scientific and economic basis. Under the direction of the warden, a large fish hatchery, one of the largest in the world, is being constructed.

#### THE SCHOOL OF LAW.

1. Lectures before citizens and organizations of the state upon the workmen's compensation law and personal injuries litigation.

2. A study of the criminal procedure of the state of Kansas for the Kansas State Bar Association.

3. A Legislative Reference Bureau, giving advice and counsel in the preparation of bills for the state legislature.

4. Inquiries of municipal officers answered in connection with the Municipal Reference Bureau of the University Extension Division.

5. Legal services furnished for the University of Kansas.

6. The Kansas Institute of Criminal Law and Criminology has been organized under the auspices of the University, through the School of Law, the University Extension Division, and other departments of the University.

#### THE STATE GEOLOGICAL SURVEY.

The University Geological Survey of Kansas was organized by the Board of Regents of the University in 1894, under the general authority given them by law. The object of the Survey is to give a complete exposition of the geological and mineralogical resources of the state, including all subjects of economic and scientific importance. By provision of the law the Chancellor of the University is *ex officio* director of the survey, and the head of the department of geology and mining is superintendent and state geologist. The results already obtained have been of great value to the state, especially in the development of coal, oil, gas, Portland cement, gypsum and its products, and clay manufactories. The Survey has published many reports of its work.

Work is being done under the following heads:

1. A study of ground water and municipal water.
2. Gypsum and wall plasters.
3. Portland cement: materials and manufacture.
4. A study of Kansas oil and gas.
5. A study of clays in the field; clay testing and clay manufacturing.
6. A study of coal deposits and coal mining, also mine explosions.
7. Gathering of mineral statistics for the United States Geological Survey.
8. Lead and zinc ores and their metallurgy.
9. Study of the general physical geography of the state.
10. Study of deposits and the mining of salt.

11. The preparation of lithographed geological maps of the state.

#### UNIVERSITY PUBLICATIONS.

In addition to the general catalogue of the University and the separate bulletins of the different schools of the University, including the Extension Division and the Summer Sessions, the following are the University publications:

1. The University of Kansas Science Bulletin—a medium for the publication of the results of original research by members of the faculty. The committee on publication is composed of five members of the science faculty.

2. University of Kansas Studies, Humanistic Series—a publication instituted by the Board of Regents for the presentation of research along humanistic lines. Each number is a complete monograph.

3. The Bulletin of the Engineering Experiment Station—containing the results of investigations of technical problems of importance in the industrial development of the state.

4. The University Geological Survey Reports.—These reports are issued as rapidly as the material for them is gathered. Ten volumes of special reports have been issued. Six annual reports were published from 1897 to 1903.

5. The University Entomological Bulletins—reports issued in regular series from time to time, comprising the results of entomological investigations conducted by the University. These deal in part with the practical problems referred to the University by various interests of the state, and in part with fundamental research problems presented by such investigations.

6. The University News Bulletin and Press Bulletin are issued weekly, for the purpose of furnishing the newspapers and the people of the state items of interest about their University.

7. The University Extension Division has published bulletins on "Training for Debating," "Playgrounds and Parks," "The Commission Plan of City Government," "Kansas High School Debating League Bulletin," containing debating subjects with references and bibliographies, etc., and material on civic and social centers.

8. High School Manuals, published by the School of Education.

*Student Life.*

The common student life at the University of Kansas is on the whole sound and genuine. It is on an unusually high plane of conduct. No community life, however, is without its dangers and its problems. The student body itself, the faculty and the Board of Regents are grappling with these difficulties and dangers in a genuine and effective fashion. The University is a part of the community. The problems that confront the state of Kansas in its social, political and economic life are immediately felt in the University of the state; and yet the citizenship of this small community which we call the University, together with its governing bodies, is attacking its own problems with less commotion, probably, and with as much sanity and coherence and less dissension than the larger community of which it is a part.

The University student governing bodies have on the whole acted with wisdom and justice. Much of the discipline of the institution has come into their hands, and will remain there just so long as their actions show them to be proper agencies for its administration. It is confidently expected that they will always remain important agencies in the informal government of the University.

*Reorganization of the University.*

The rapid growth of the University, the increase during the last ten years from an enrollment of 1233 to one of 2437, a large increase in the teaching force, and an enormous increase in the complexity of the University and in the number of its activities, have made necessary some reorganization of its administration. This matter is being carefully worked out by a committee of twenty-one, made up of men from all of the schools of the University, who are giving the matter the most careful consideration. Their action will doubtless point the way for improvement in the University administration and to more efficient methods of carrying on its activities.

*New Activities of the University.*

1. School of Education. The School of Education has in a remarkably short time proven its place in the University and demonstrated its necessity. It has already reached a place of importance and leadership in the educational life of the state. There seems to be every reason to believe that it will be one of

the important factors in working out for Kansas a higher and more complete intellectual and educational life.

2. School of Medicine. The School of Medicine has taken on new life during the past year, and has largely increased the coherence and efficiency of its work. The teachers of the clinical department of the school are as rapidly as possible being placed on a salary, so that they may give their time and their first thought to the institution, where their primary interest will lie. In other words, the School of Medicine has been placed, so far as its educational and intellectual standards are concerned, on the same basis as any other part of the institution, and its teaching will be handled in precisely the same manner as the teaching of any other professional school in the institution. The new hospital, to be used as a state hospital, was completed in October, 1911. It is a beautiful building and thoroughly adapted to its purpose, and has proved to be an effective instrument in connection with the teaching of medicine. It is almost entirely a teaching institution and not a private hospital, only eight beds out of sixty-four being usable for private patients. For that reason those who resort to this hospital are usable by the school for teaching purposes, and students have at hand a first-class laboratory for the study of human medicine. The county cases sent in under the county indigent poor law have proved to be large in number and to afford invaluable clinical material. The number of county cases sent in under this law is over one hundred.

REPORT OF THE BELL MEMORIAL HOSPITAL (STATE HOSPITAL),  
BEGINNING OCTOBER 23, 1911.

3. Journalism. The Department of Journalism has been enlarged and provided with a new plant and a new location during the past year. A head of the department on full time was appointed in August of 1911, and into his hands was given the whole matter of University publicity. Its work has largely increased in amount and efficiency, and its influence in the University is constantly increasing. The work in journalism proved successful from the first. The department has grown normally, and the work that it has done has been tested by experience in actual life.

4. University Extension. University Extension has developed largely during the past two years, and is assuming proportions rightfully belonging to such work in an institution of the character of the University of Kansas. Your attention is respectfully called to the reports of the University Extension Division, which will show the great variety of work and the remarkable amount of work done by this University agency.

5. Home Economics. The work in Home Economics is now based upon a requirement of two years of college work. It therefore occupies an advanced position as to standards. The work done has been efficient, and the department is more and more occupying a position of influence. There can be no doubt about the demand for such work in a university course, and in regard to the University being justified in offering whatever work in home economics may be necessary in the field of the University itself. The department has been of considerable practical use to the University in connection with occasions when the institution must act as host and provide lunches for a considerable number of visitors. The work in this respect has shown very conclusively that the general department work has been well and thoroughly done.

### *New Buildings.*

Besides the new hospital building at Rosedale, to be used as a state hospital in connection with the School of Medicine, the University has finished during the past two years the first

wing of the College of Liberal Arts building at a cost of \$125,000, for which appropriation was made before the beginning of the biennium of July 1, 1910. This building is fireproof, built after an impressive architectural design, and is a part of a large and important memorial building which is to be the center of the building scheme of the University. It provides mainly for departments in the College of Liberal Arts, namely, the departments of mathematics, philosophy and psychology, economics, sociology, history and political science. The upper floor is also occupied by the department of drawing, painting and design, part of which is in the College of Liberal Arts and part in the School of Fine Arts. There will become available on July 1, 1912, an appropriation of \$42,500 for the excavation and foundation of the connecting link and central portion of the large building just mentioned. It is expected that the next legislature will provide for the superstructure of this connecting link and central portion, which will be used largely for administrative offices. The present administrative offices of the University are absurdly inadequate, being smaller and more illy equipped than the offices of many high schools. It is imperative that the executive side of the University be better housed and have better opportunity to do its work.

The University has also built and equipped a clay-working laboratory, at a cost of \$7500. This laboratory was placed at the south end of the ore-testing laboratory of the Mining building, the combination being a happy one and affording power for both. The work in clay testing will be pushed rapidly and will have both its commercial and artistic sides, and there is every reason to expect a most important and valuable outcome for the state of Kansas from an examination into material for the exceedingly valuable and important clay industry.

### *Cost of Living.*

There seems to be no indication of a lowering of the cost of living. The present high cost is a serious drain upon the salaries of university men. Nor can it be charged that they are not careful and economical in their expenditures. They as a class are unusually conservative in this respect, and yet the burden of the increased cost of living has become so great as to be a serious problem. In connection with this must be considered the relative standard of living in a community like Lawrence.

This as compared with large communities is conservative, and yet it too is changing, not only in Lawrence, but in practically every community in Kansas. These standards university and college men are compelled to conform to. As we took occasion to say two years ago, we feel certain that the salaries of the University are now, to all intents and purposes, lower than they have ever been in the history of the institution.

*Per Capita Cost of Education and Ratio of Students to Teachers.*

The investigations of the Committee on Efficiency of the Commission on Higher Education serve to corroborate what has been brought to your attention before, namely, that the per capita cost of education at the University of Kansas is much lower than the average in institutions of its class and much lower than it ought to be. They serve to show, also, that the average number of students to a teacher was considerably in excess of the average of other institutions of like grade with the University, and considerably above what should obtain if the University is to give the individual attention so necessary for the best training. A good example of this is to be found in a recent report of Reed College, an institution recently established in Portland, Oregon, for the same character of work as is done by the College of Liberal Arts and Sciences at the University of Kansas. There the attempt is being made to conduct the work on a basis of reasonable efficiency, using the general experience of educational institutions as a basis, for it has been clearly demonstrated that there is no guide so sure as the actual experience of a considerable number of standard institutions in North America as to what ought to be a reasonable average as to per capita cost and ratio of students to teachers. In the Reed College catalogue of 1911-'12, on pages 20 to 24, inclusive, the statement is made that experts in the field of higher education are agreed that the most trustworthy tests of the teaching efficiency of colleges that may be applied to all institutions are the following: First, the standard of entrance requirements and the manner in which they are enforced; second, the average salary of the teaching force; third, the ratio of students to teachers; fourth, the per capita cost of each student or the cost of maintenance of each student per year. The University of Kansas con-

forms thoroughly to the standard in regard to entrance requirements and the manner in which they are enforced. It does not, however, conform to the standard in regard to the salary of teachers, the ratio of students to teachers, or the per capita cost for each student. For example, the average salary of all teachers at Reed College is \$2385; that of the University is very much lower, being in the neighborhood of \$1600. In Reed College the ratio of students to teachers is 10, while in the University of Kansas it varies in different years from 16 to 18 and 20. In Reed College the cost per student is \$410. The per capita cost at the University of Kansas varies between \$170 and \$175; this, too, in spite of the fact that the University, unlike Reed College, has many professional schools and technical departments where the per capita cost is necessarily much greater than in the College of Liberal Arts.

#### *Increase in Administration.*

Two years ago we called the attention of the Governor to the fact that the growth of the University was increasing largely the amount of administrative work necessary. It was pointed out that the university of even a decade ago has passed away, never to return. The modern university is a much more complex institution than the university of ten years ago, and this growing complexity adds greatly to the burdens of administration. The increase in administrative duties makes it necessary to withdraw certain men wholly or partially from the teaching of classes. Very often these men are the best teachers that we have, and administrative burdens that must necessarily fall on them greatly interfere sometimes with their teaching function, and especially with their ability to conduct investigation and research and thus increase the boundaries of knowledge, or to enter upon state service work and therefore be of immediate use to the state. This condition of affairs calls for an increase in the teaching force of the institution, for the time that is taken for administrative work must be made up by the addition of other teachers to supply the necessary teaching time.

#### *Lack of Permanent Income.*

The University of Kansas still labors under the very great handicap of having no permanent source of income except a very small one of interest on its land fund, amounting to about

\$7200 per year. This situation should have the earnest attention of all interested in higher education in the state of Kansas. Some means should be devised for supplying the University with a permanent income large enough to give stability and permanency to the life of the institution.

#### *Fish and Game.*

The University has been responsible in the main for the conduct of the fish and game department of the state and has borne the full salary of the warden. To the best of our knowledge and belief the work has been excellently done, and the present method of administering the same is a success and will commend itself to the people of the state. But one year has passed under the present law, and it is too early to make definite recommendations to the next legislature in regard to the further enlargement of the fish and game department. A report will be made in due time to the legislature itself.

#### *Weir City Mining School.*

The Board of Regents found itself in a very difficult situation in regard to administering the Weir City mining bill. The bill itself seemed indefinite in regard to the establishment of the school and certain other features in connection therewith. The Board of Regents felt in doubt as to its rights and duties in the matter, and after taking legal advice felt that its authority was too indefinite for it to proceed without the sanction of the courts. There are grave matters of policy connected with the whole matter, and the question of duplication and the relation of a new state school to the whole question of reorganization of education in Kansas calls for most careful consideration.

#### *The Next Legislative Budget.*

It is impossible on the first of August of the current year to make a definite budget to be acted upon by the legislature in January of 1913, which budget must be operative until June 30, 1915. It is impossible to say what the enrollment and general condition of the University in September next may make necessary in the recommendations to the legislature, and in November next even it will be difficult to foresee the needs of an institution in connection with a budget which does not begin to operate for eight months after the budget is made up, and does not cease to operate for two years and eight months

thereafter. It is therefore necessary that the making of a definite detailed budget go over until the fall of 1912. It is clear, however, that the University can not proceed further upon the much reduced income that it is now using. It is clear, further, that the large cut in appropriations for the upkeep of buildings and grounds will leave the physical equipment of the institution in such condition that a great enlargement in this part of the budget for the next two years will be necessary. Respectfully submitted,

FRANK STRONG, *President.*

SCOTT HOPKINS, *Vice President.*

RODNEY A. ELWARD, *Secretary.*

CHARLES F. FOLEY.

JAMES A. KIMBALL.

WILLIAM ALLEN WHITE.

LEON S. CAMBERN.

## FINANCIAL STATEMENT.

### Receipts and Disbursements, Fiscal Year ending June 30, 1911.

#### RECEIPTS, 1910-'11.

Balance from previous year.....		\$4,683 66
State appropriations:		
For general maintenance.....		368,978 00
For permanent repairs and improvement of buildings and grounds .....		40,144 00
For first wing of Hall for Administration, lecture and recitation rooms for the College of Liberal Arts and Sciences, and equipment.....		81,851 58
For Hospital at Rosedale, to be used as state hospital, and equipment .....		48,131 74
For Regents, per diem and expenses.....		1,000 00
For electrical engineering equipment.....		10,000 00
For Chancellor's contingent fund.....		500 00
Interest on permanent endowment fund.....		9,074 25
Fees from students:		
Matriculation .....	\$4,980 00	
Incidental .....	28,073 50	
Summer session .....	3,995 00	
Diploma .....	1,971 50

Balance cash on hand, June 30, 1911.....

7,074 59

TOTAL ..... \$641,842 51

## FINANCIAL STATEMENT.

## Receipts and Disbursements, Fiscal Year ending June 30, 1912.

## RECEIPTS, 1911-'12.

Balance from previous year.....		\$7,074 59
State appropriations:		
For general maintenance.....		413,820 00
For permanent repairs, improvements, and upkeep of buildings and grounds, and for special equipment (for the biennium, \$40,000), received and expended.....		24,246 57
For first wing of Hall for Administration, lecture and recitation rooms for the College of Liberal Arts and Sciences, and equipment (reappropriation).....		38,007 84
For clay-working laboratory.....		7,500 00
For geological survey, University extension, traveling expenses, and industrial research (appropriation, \$11,100) .....		9,062 19
For hospital, dispensary and laboratory maintenance, clinical medicine .....		12,000 00
For Chancellor's contingent fund.....		500 00
For Regents per diem and expenses.....		1,000 00
Interest on permanent endowment fund.....		10,585 63
Fees from students:		
Matriculation .....	\$4,800 00	
Incidental .....	28,706 50	
Summer session .....	4,230 00	
		*37,736 50
Diploma .....		2,020 00
Sale of laboratory material to students, and for laboratory expense:		
Anatomy .....	\$526 75	
Bacteriology .....	127 90	
Botany .....	521 45	
Chemistry .....	4,638 20	
Civil engineering .....	123 05	
Clinical .....	1,662 50	
Correspondence .....	425 25	
Electrical engineering .....	76 68	
Entomology .....	46 50	
Home economics .....	102 00	
Journalism .....	75 00	
Mechanical engineering .....	173 40	
Mineralogy .....	33 00	
Mining engineering .....	12 50	
Pharmacy .....	757 75	
Philosophy .....	43 00	
Physics .....	202 88	
Physiology .....	256 55	
Shops .....	887 43	
Zoölogy .....	567 84	
		11,259 63

\* Of this amount \$612.50 was rebated to students. (See item under disbursements.)

Deposits by students and others, for keys, apparatus, books, etc. ....		\$1,174 44
Laboratory coupons sold and not redeemed.....		289 13
From government for post office maintenance.....		200 00
From Kappa Alpha Theta for purchase of books.....		3 76
Rental of campus, University auditorium, equipment, etc....		244 37
For merchandise returned, and rebates of excess payments,		217 38
Commencement luncheon tickets, and duplicate diplomas...		100 52
Library fines .....		4 97
Sale of products and public-service work:		
Engineering shops .....	\$1,396 01	
Liquid air .....	756 75	
Fees for testing weights and measures...	32 65	
Journalism press .....	3,219 57	
Miscellaneous .....	107 87	
		5,512 85
Sale of old machinery, boxes, lumber, cinders, and junk.....		217 08
Sale of apparatus, books and magazines, and for breakage or loss .....		98 73
For cafeteria equipment, part reimbursement.....		45 92
Special funds, gifts, fellowships, etc.:		
The Marcella Howland scholarship fund.....		92 75
The Douglas County Physicians' fellowship fund.....		48 38
The Eliza Matheson memorial fund.....		100 75
The Frances Schlegel Carruth scholarship fund.....		100 00
The Bryan prize essay fund, interest.....		15 32
The Applied Christianity Prizes fund.....		516 41
The Women's Student Government Association scholarship fund .....		310 83
Aid fund for women students.....		70 00
Industrial research fellowships:		
H. K. Elston fellowship fund.....	\$1,516 47	
Julius Karpen fellowship fund.....	3,790 48	
Ash Grove fellowship fund.....	375 00	
Holophane fellowship fund.....	1,505 85
